SUMMER INTERNSHIP EVALUATION

Course Code: ECO4335 **Credit Units: 06**

GUIDELINES FOR INTERNSHIP FILE AND INTERNSHIP REPORT

(These guidelines will be useful for undertaking an internship programme during the summer or at any other time wherein the student/ researcher works full time with a company/organisation)

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship programme can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal class room situations. These attributes are intellectual ability, professional judgment and decision making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain and submit a file (**Internship File**) and a report (**Internship Report**).

INTERNSHIP FILE
The Internship File aims to encourage students to keep a personal record of their learning and achievements throughout the Programme. It can be used as the basis for lifelong learning and for job applications. ***Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.***

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and his/her own personal contribution to the organization.

The File is essentially a comprehensive documentation of how one proceeds while working on the assignment and should be regularly checked by the faculty guide/ supervisor, issues discussed with the students, doubts if any clarified and signed as having done so. This will form the basis of **continuous evaluation** of the project.

The File will include ***five sections*** in the order described below.

1. **The Title Page –** An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Table of Content –** An outline of the contents of the file by topics and subtopics with the page number and location of each section.
3. **Introduction** – Short, but should include how and why you obtained the internship experience position and the relationship it has to your academic/professional and career goals.
4. **Main Body** – Should include a brief summary/ executive summary of the **Internship Project Report** that the student has worked on, an **analysis of the company/organization** in which the student is working, a **personal review** of the student's management skills and how they have been developed through the programme, the daily tasks performed, major projects contributed to, dates

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

and hours spent on a task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

5. **Appendices** – Include pamphlets, forms, charts, brochures, technical and descriptive literature, graphs and other information related to your Internship experience.

INTERNSHIP REPORT

The **Internship Report** is the research report that the student has to prepare on the project assigned by the organization. (Incase a student is not assigned a specific research project in the organization, he has to select any one aspect of the organization and prepare a research report on it). The lay out of the report should be as per the standard layout prescribed by the organization wherein the student undertakes the Internship. In case, there is no layout prescribed by the organization the following components should be included in the report:

- **Title or Cover Page**.
  The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

- **Acknowledgements**
  Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

- **Abstract**
  A good"Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

- **Table of Contents**
  Titles and subtitles are to correspond exactly with those in the text.

- **Introduction**
  Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

- **Materials and Methods**
  This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

- **Results and Discussion**
  Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

  Note that in writing the various secions, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporing or contradicting the present case of research.

- **Conclusion(s) & Recommendations**
  A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:
  - Did the research project meet its aims (check back to introduction for stated aims)?
  - What are the main findings of the research?
  - Are there any recommendations?
  - Do you have any conclusion on the research process itself?

- **Implications for Future Research**
  This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

- **Appendices**
  The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.
- **References**
  References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

The Layout Guidelines for the Internship File & Internship Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Assessment Scheme:

Continuous Evaluation: 30%
(based on Internship File and the observations of the faculty guide/ supervisor)

Feedback from Company/ Organization: 10%

Final Evaluation:
(Based on Internship Report, Viva/ Presentation) 60%

ENTREPRENEURSHIP & SMALL SCALE BUSINESS

Course Code: ECO4404 **Credit Units: 03**

Course Objective: The purpose of this paper is to prepare a ground where the students view Entrepreneurship as a desirable and feasible career option. In particular the paper seeks to build the necessary competencies and motivation for a career in Entrepreneurship.

Course Content:

Module I: Er.-Entrepreneurship-Enterprise: Conceptual issues. Entrepreneurship vs. Management. Roles and functions of er in relation to the enterprise and in relation to the economy. Entrepreneurship is an interactive process between the individual and the environment. Small business as seedbed of Entrepreneurship; Entrepreneur competencies, Entrepreneur motivation, performance and rewards

Module II: Opportunity scouting and idea generation: role of creativity and innovation and business research. Sources of business ideas; Entrepreneur opportunities in contemporary business environment, for example opportunities in net-work marketing, franchising, business process outsourcing in the early 21 century. The process of setting up a small business: Preliminary screening and aspects of the detailed study of the feasibility of the business idea and financing/non-financing support agencies to familiarize themselves with the policies/programs and procedures and the available schemes.

Module III: Management roles and functions in a small business. Designing and re-designing business process, location, layout, operations planning and control. Basic awareness on the issues impinging on quality, productivity and environment; Managing business growth; The pros and cons of alternative growth options: internal expansion, acquisitions and mergers, integration and diversification; Crisis in business growth

Module IV: Sources of risk/venture capital, fixed capital, working capital and a basic awareness of financial services such as leasing and factoring.

Module V: Issues in small business marketing. The concept and application of product life cycle [plc], advertising and publicity, sales and distribution management; The idea of consortium marketing, competitive bidding/tender marketing, negotiating with principal customers. The contemporary perspectives on Infrastructure Development, Product and Procurement Reservation, Marketing Assistance, Subsidies and other Fiscal and Monetary Incentives. National state level and grass-root level financial and non-financial institutions in support of small business development.

Examination Scheme:

DISSERTATION

Course Code: ECO4437 **Credit Units: 06**

GUIDELINES FOR DISSERTATION

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree

The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Selecting the Dissertation Topic

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning the Dissertation

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

your confidence.

- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

Dissertation format

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary.**
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

  Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

  For books, the following details are required:
  Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the Assessment of the Dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

Assessment Scheme:

Continuous Evaluation: (Based on Abstract, Regularity, Adherence to initial plan, Records etc.)	40%
Final Evaluation: Based on,	60%
Contents & Layout of the Report,	25
Conceptual Framework,	10
Objectives & Methodology and	10
Implications & Conclusions	15

Pre-requisites/Exposure					
Co-requisites					

Catalog Description
Microsoft Excel is a very popular business productivity application for the management and manipulation of data. With the right training and understanding of Excel, businesses and individual users can unlock the world of opportunities that this powerful business application offers. This course will provide all the tools necessary to create and use basic and advanced spreadsheets.

Course Objectives
After completion of this course, students will be able to
- Learn the various methods for entering and editing data
- Understand the various ways to write simple formulas.
- Analyse the data using techniques in excel

Course Outcomes
On completion of this course, the students will be able to
CO1: Describe the features offered by spreadsheet program.
CO2: Demonstrate their knowledge of features of basic excel.
CO3: Illustrate the usage of functions in excel.
CO4: Apply the option of charts and graphs in Ms Excel.

Course Content:

Modules	**Number of hours**
Module 1: Getting Started with Excel Introduction to Spreadsheets: Launching Excel, entering data in spreadsheet, widening rows and columns, applying basic formatting in spreadsheet, saving work in excel. Entering Data into cells: Using autofill, sort & filter feature, creating lists, inserting & deleting rows and columns. Wrapping & merging text and cells,	9
Module 2: Basics in excel Protecting & sharing workbooks, freeze panes, understanding normal, page layout and page break preview in excel. Setting the page orientation and print area. Adding hyperlinks to cells, inserting images, objects, equations and symbols.	9
Module 3: Charts & Formulas in Excel Understanding Charts: Inserting bar charts, pie charts, column charts and line charts in spreadsheets, formatting and resizing the chart. Using Basic	9

functions- average, sum, min, max, product etc. date functions, time functions. Math Operators in Excel, combining mathematical operators.	
Module 4: Functions in Excel Logical- using IF, AND, OR, NOT, TRUE, FALSE Functions. Textual- using TRIM, UPPER, LOWER, REPLACE Functions. Import data into excel, Look up functions with index and match. Rounding, sum product, conditional counts and conditional sums, Filtering data, pivot table, pivot charts, conditional formatting.	9
Module 5: Financial and Statistical Functions in Excel & Pivot and Dashboard Financial functions: Time value of money- Present value, Future value, PMT with beginning date, PMT with ending date, NPV, Goal seek, Scenario Manager, IRR. Statistical functions: Max, Min, Average, Large, Rank, Small, Var, Std Dev. Working with external data, advanced use of pivot tables and creating dashboard. V lookup and H lookup table.	9

Bachelor of Business Administration (Honors/ Honors with Research)/ Bachelor of Business Administration- Banking & Finance (Honors/ Honors with Research)/ Bachelor of Arts (Honors/ Honors with Research) in Economics/ Bachelor of Commerce (Honors/ Honors with Research)
(Semester-IV)

Course Code: SMGT2401	**DATA INTERPRETATIONS AND VISUALISATION**	L	T	P	C
Version 1.1	Latest Approved	2	0	1	3
Pre-requisites/ Exposure					
Co-requisites					

Catalog Description
This course familiarizes the students on data visualization tools. This course is designed to provide a fundamental and strategic understanding on the concepts of Business Intelligence using Tableau.

Course Objectives
The objective of this course is to:

- Equip students with the concepts of BIs and its types and how to connect to and import data, author reports using Power BI Desktop, and publish those reports to the Power BI service
- Emphasize on how to create dashboards and share with business users—on the web and on mobile devices

Course Outcomes
On completion of this course, the students will be able to:
CO1: Connect, import, shape, and transform data for business intelligence (BI)
CO2: Visualize data, author reports, and schedule automated refresh of your reports
CO3: Create and share dashboards based on reports in Power BI desktop and Excel
CO4: Use natural language queries and create real-time dashboards

Course Content:

Modules	**Number of hours**
MODULE 1: **Tableau:** Data visualization and its significance, Connecting Tableau to a Data File - CSV File, Navigating Tableau, creating calculated fields, adding colors, adding labels and formatting, exporting worksheet. **Power BI**: What is Power BI? Installing Power BI Desktop & Project Setup, Connecting Power BI Desktop to Source Files, Working in the Query Editor, Understanding the Data Model & Creating Visuals.	9
MODULE 2: **Tableau:** working with data extracts, working with time series data, understanding aggregation, granularity and level of detail, creating an area chart and learning about highlighting, adding a filter and quick filter.	12

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Power BI: Understanding the Power BI Desktop Workflow, Exploring the Interface of the Data Model, Understanding the Query Editor Interface, Keeping & Removing Rows, Working with Filters, Removing Empty Rows, Working with Columns, Replacing Values, Formatting Data & Handling Formatting Errors.	
MODULE 3: **Tableau:** Relationships v/s joins, Joining data, blending data, data joining v/s data blending, dual axis chart. **Power BI:** Pivoting & Unpivoting Data, Splitting Columns, Creating Groups & Cleaning Up Project, The Star Schema, Query Duplicates vs References, Creating the DIM-Region Table & Removing Duplicates, Merging Queries, Understanding "Extract", Working with Conditional Columns, Understanding Basic Mathematical Operations, Performance Optimization	12
MODULE 4: **Tableau:** Creating a map, scatter plot, working with hierarchies, applying filters to multiple worksheets, create interactive dashboard, storytelling. **Power BI:** Understanding Relationships, Cross Filter Direction & Many-to-Many, Understanding the DAX Basics, Applying the DAX Basics, Creating Visuals in the Report View.	12

(Semester-III)

Course Code: SBUA2301	**NATURAL LANGUAGE PROCESSING**	L	T	P	C
Version 1.1	Latest Approved	2	0	1	3
Pre-requisites/Exposure					
Co-requisites					

Course Description:
In this course general introduction including the use of state automata for language processing and syntax including a basic parse for natural language processing are discussed in detail. Basic features like regular expressions, Text Normalization, Edit Distance, n-gram model and advanced features like feature structures and realistic parsing methodologies, part of speech tagging will be introduced. The concepts learnt in the studies of natural language processing will be applied in jupyter notebook using python for developing small to medium level applications.

Course Objectives: The objective of this course is to

- Equip the students with concepts of natural language processing through problem solving and practical approach.
- Provide an overview of various tools in the field of natural language processing to gain practical understanding of the concepts.

Course Outcomes: On completion of this course, the students will be able to
CO1: Explain, knowledge in speech recognition, models and algorithms; Explain regular expressions and solve related problems; Explain and solve problems related to lemmatization and stemming, minimum edit distance.
CO2: Explain language models and compare their performance on datasets; Solve some problems on naïve bayes algorithm.
CO3: Explain logistic regression, similarity, language modelling and solve problems based on them.
CO4:.Describe ANN and Part of speech tagging; Solve problems based on them.
CO5:Describe RNN models and distinguish between simple ANN and RNN

Course Content:

Modules	**No of Hrs**
Module-I Knowledge in Speech and Language Processing ,Ambiguity ,Models and Algorithms Language, Thought, and Understanding ,The State of the Art and The Near-Term Future Some Brief History, Regular Expressions, Words ,Corpora, Text Normalization ,Minimum Edit Distance	**9**
Module-II Evaluating Language Models, Generalization and Zeros, Smoothing, Kneser-Ney Smoothing, The Web and Stupid Backoff, Advanced: Perplexity's Relation to Entropy, Naive Bayes Classifiers, Training the Naive Bayes Classifier, Worked example, Optimizing for Sentiment Analysis, Naive Bayes for other text classification tasks, Naive Bayes as a Language Model, Evaluation: Precision, Recall, F-measure, Test sets and Cross-validation, Statistical Significance Testing Advanced: Feature Selection.	**9**

Bachelor of Business Administration- Business Analytics (Honors/ Honors with Research)
(Semester-IV)

Course Code: SBUA2401	**BIG DATA ANALYTICS**	L	T	P	C
Version 1.1	Latest Approved	2	0	1	3
Pre-requisites/Exposure					
Co-requisites					

Course Description:
In today's data-driven world, organizations are inundated with vast amounts of data from various sources such as social media, sensors, mobile devices, and more. Big Data Analytics has emerged as a crucial field for extracting meaningful insights and making informed decisions from these large and complex datasets. This course provides a comprehensive overview of Big Data Analytics, covering fundamental concepts, techniques, and tools used to analyze, process, and interpret massive datasets.

Course Objectives:
On completion of this course, the students will be able to:
CO1: To understand the big Data Platform and its uses
CO2: To provide an overview of apache hadoop
CO3: To provide HDFS concepts and interfacing with HDFS
CO4: To provide hands on Hadoop Eco System
CO5: TO understand spark framework

Course Outcomes
The learning outcomes of this course are as under:

- After studying this course, students will be able to identify Big data and its Business Implications
- After studying this course, students will be able to list the components of Hadoop and Hadoop eco system.
- After studying this course, students will be able to access and process data on distributed file system.
- After studying this course, students will be able to manage job execution in Hadoop environment
- After studying this course, students will be able to develop Big Data Solutions using Hadoop Eco System

Course Content:

Modules	**Hours**
Module-I Fundamentals of Big Data Analysis Data storage and analysis, Characteristics of big data, Big Data analytics, Typical analytical architecture, requirement for new analytical architecture, challenges in big data analytics-Need of big data framework	**6**
Module-II Hadoop Framework	**9**

Bachelor of Arts (Honors/ Honors with Research) in Applied Psychology/ Bachelor of Science (Honors/ Honors with Research) in Clinical Psychology
(Semester-III)

Course Code: SPSY2301	PSYCHOMETRIC TESTING	L	T	P	FW/ Proj	C
Version	**2023**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course explores the role of psychological assessment in understanding the behaviour of the individual. Psychometric testing is a sophisticated and scientific approach to evaluating an individual's psychological traits, abilities, and preferences. At its core, it's a methodical process that employs standardized assessments to measure various aspects of cognition, personality, and behavior. The course is theoretically driven, as it delivers the concepts related to psychometric testing based on rigorous scientific principles and statistical analyses to ensure the validity, reliability, and fairness of the assessments.

Course Objectives

Psychological assessment is a process of testing that uses a combination of techniques to help arrive at some hypotheses about a person and their behaviour, personality, and capabilities. Psychological assessment is also referred to as psychological testing or performing a psychological battery on a person. A psychological assessment is the attempt of a skilled professional, usually a psychologist, to use the techniques and tools of psychology to learn either general or specific facts about another person, either to inform others of how they function now, or to predict their behaviour and functioning in the future. Psychologists are the only profession that is expertly trained to perform and interpret psychological tests. Below are the objectives of studying this particular paper of Psychology:

- To train the students in various psychological assessment techniques.
- To impart skills necessary for selecting and applying different tests for different purposes such as evaluation, training, and rehabilitation.

Course Outcomes (COs):

On completion of this course, the students will be able to

- Define psychometric testing and ethical issues related to testing.
- Understand the measurement process, various levels of measurement and steps to construct a psychological test.
- Conceive and develop an idea related to psychometric properties such as reliability, validity, and norms.
- Get knowledge about various tests to assess behavioral and cognitive aspects of the individual and the application of psychological tests in different set-ups.

Version	**2023**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description
This course explores the role of Psychological Test Development to equip students with the knowledge and skills needed to create, administer, and interpret psychological tests effectively and ethically. This includes understanding psychological constructs, mastering test construction principles, learning about psychometric properties, administration procedures, interpretation techniques, ethical considerations, and the application of tests in various settings. The course emphasizes critical evaluation of existing tests, research skills development, and preparing students for careers in psychological assessment and research.

Course Objectives
The course objective of Psychological Tool Development typically revolves around providing students with the knowledge and skills necessary to create, administer, and interpret psychological tests effectively and ethically. Followings are the objectives of studying this particular paper of Psychology:

- To Learn the principles and techniques involved in constructing valid, reliable, and culturally fair psychological tests.
- To Understand psychometric properties such as reliability, validity, and standardization, and learn how to assess and improve these properties during test development.
- To Develop critical thinking skills to evaluate existing psychological tests critically, considering their strengths, limitations, and appropriateness for different purposes and populations.
- Develop research skills necessary for conducting empirical studies related to test development, validation, and refinement,

Course Outcomes (COs):
On completion of this course, the students will be able to

- Designing and Writing about Items
- Understand Meaning and Purpose of Item Analysis, Factor Affecting Item difficulty and discrimination.
- Know about various theories of item analysis.
- Understand various psychometric properties such as reliability and validity, various types of reliability and validity.
- Explore various norms required for test standardization and psychological test manual writing.

ROBOTIC PROCESS AUTOMATION

Course Code: SIFT2301 **Credit Units: 3**

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation.

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Course Contents:

Module 1: Programming Basic and Recap

Programming Concepts Basics I - Understanding the application, Basic Web Concepts, Protocols, Email Clients, Data Structures, Data Tables, Algorithms, Software Processes, Software Design, SDLC.

Programming Concepts Basics 2- Scripting, Net Framework, Net Fundamentals, XML, Control structures and functions, XML, HTML, CSS, Variables & Arguments.

Module II: RPA Concepts

RPA Basics - History of Automation, what is RPA, RPA vs Automation, Processes & Flowcharts, Programming Constructs in RPA, What Processes can be Automated, Types of Bots, Workloads which can be automated.

RPA Advanced Concepts - Standardization of processes, RPA Development methodologies, Difference from SDLC, Robotic control flow architecture, RPA business case, RPA Team, Process Design Document/Solution Design Document, Industries best suited for RPA, Risks & Challenges with RPA, RPA, and emerging ecosystem

Module III: UiPath Introduction & Basics

Introduction to UiPath- Installing UiPath Studio community edition, The User Interface, Keyboard Shortcuts, About Updating, About Automation Projects, Introduction to Automation Debugging, Managing Activation Packages, Reusing Automations Library, Installing the Chrome Extension, Installing the Firefox Extension, Connecting your project to a source control system, Activities Guide.

Data Manipulation- Data Manipulation Introduction, Scalar variables, collections and Tables, Text Manipulation, Data Manipulation, Gathering and Assembling Data.
Recording and Advanced UI Interaction - Recording Introduction, Basic and Desktop Recording, Web Recording, Input/Output Methods, Screen Scraping, Data Scraping, Scraping advanced techniques. Selectors

Module IV: **UiPath Advanced Automation concepts and techniques**
Image, Text & Advanced Citrix Automation- Introduction to Image & Text Automation, Image based automation, Keyboard based automation, Information Retrieval, Advanced Citrix Automation challenges, Best Practices, using tab for Images, Starting Apps.
Excel Data Tables & PDF - Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, extracting a single piece of data, Anchors, Using anchors in PDF.
Email Automation- Email Automation, Incoming Email automation, Sending Email automation

NETWORK DESIGN AND MANAGEMENT

Course Code: SIFT2401 **Credit Units: 3**

Course Contents:

Module I: Network Devices & Hardware
Introduction to Computer components- CPU, Motherboard types, NIC, RAM categories, storage devices, IOS and CMOS, boot process, Installation, configuration and troubleshooting of system components.
Introduction to Network hardware- Workstation, printer, Server, UPS. Cable types, Networking devices and their role- Hub, repeater, amplifier, bridge, switch, router, gateway, firewall, multiplexer, demultiplexer, modem, wireless Access Point.

Module 2:
Goals and applications of networks, Categories of networks,
Organization of the Internet, ISP, Network structure and architecture (layering principles, services, protocols and standards), The OSI reference model, TCP/IP protocol suite, Network devices and components.

Module 3: Configuring and Troubleshooting
Configuring CISCO devices –IOS basics, applying a Basic Configuration using CISCO IOS, Verifying Connectivity; Common symptoms and problems with hardware. Isolating problems using error codes, POST audible/visual codes. Troubleshooting procedures, Troubleshooting commands for IOS.

Module 4: Security and Troubleshooting
Security Fundamentals: WLAN vulnerabilities, WLAN threats, Basic WLAN Security Technologies: Wired equivalent privacy (WEP), Authentication and association; Wi-Fi Protected Access (WPA), Cisco Wireless LAN Security, Modes of unauthorized access in WLAN, Security measures to prevent unauthorized access in WLAN, Configuring Basic WLAN Security, Using VPNs; Other Enterprise Security Services: VLANs, Spanningtree, General Approach to Preparing for network failure, Network and fault management

Bachelor of Science (Honors/ Honors with Research) in Chemistry
(Semester-III)

Course Code: SCHY2301	RUBBER TECHNOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	0	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Course Objectives
At the end of the course students should be able to understand different types of rubbers, additives used in rubber industries to improve its end use performance, different techniques for the compounding of rubber, manufacturing of tyres and design of tyres.

Course Outcomes (COs):
On completion of this course, the students will be able to

- Define Rubber, Natural and Synthetic and additives to improve the properties.
- Understand how the rubber is manufactured.
- Conceive and develop an idea for different types of rubber and their applications.
- Apply knowledge and understanding of various characterization parameters of rubber.
- Explain testing parameters of rubber products.

Course Content:

Modules	Blooms level*	Number of hours
MODULE-I: Rubber Technology: Introduction, natural rubber- composition, extraction, processing, mastication, smoke rubber, crape rubber, Structure-properties relationship and applications.	**L1, L2, L3**	9
MODULE-II: Synthetic rubbers- Manufacture, properties and applications of nitrile rubber, chloroprene rubber, diene rubber, SBR rubbers, silicon-based rubbers, Thermoplastic elastomers.	**L1, L2, L3**	9
MODULE III: Additives used in rubber industries, filler systems, stabilizer systems, colorants, UV absorber, Antioxidants, blowing agent, flame retardant, antistatic agents, plasticizers, release agents, vulcanization system, compounding Techniques.	**L3, L4, L5**	9
MODULE-IV: Introduction to Tyres, Development of tyres, classification and types of tyres, tyre components, pneumatic tyres. Conveyer, V- belt, cable & hoses, Footwear, cellular & rubber molded products, Latex products & adhesives	**L3, L4, L5**	9
MODULE-V: Testing of rubber products- Mechanical Testing, Tensile, Flexural, Compression, Abrasion resistance, Creep resistance, Fatigue resistance, Thermal Testing, Electrical, Environmental Stress Cracking, Morphological.	**L3, L4, L5, L6**	9

(Semester-IV)

Course Code: SCHY2401	INDUSTRIAL APPLICATIONS OF CARBON-NANOCOMPOSITES	L	T	P	FW/ Proj	C
Version	**2023**	3	0	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Course Objectives
At the end of the course students should be able to understand nanocomposites their synthesis with special emphasis on carbon nanocomposites and their applications and high-end usages in industries.

Course Outcomes (COs):
On completion of this course, the students will be able to

- Define carbon nanocomposites, multiwalled carbon nanotube.
- Understand different forms of carbon and types of nanocomposites.
- Conceive and develop an idea for synthesis, functionalization & processing of carbon nanocomposites.
- Explain the processing methods of carbon nanocomposites.
- Apply knowledge and understanding of carbon nanocomposites in daily life in different fields such as of sensing, energy storage devices etc.

Course Content:

Modules	Blooms level*	Number of hours
MODULE I: Introduction to Carbon Carbon molecules, nature of the carbon bond, new carbon structures, discovery of C60/C70 structure of C60/C70 and its crystal, from a Graphene Sheet to a Nanotube, Single wall and Multi walled Nanotubes, Zigzag and Armchair Nanotubes, Nomenclature, Euler's Theorem.	**L1, L2, L3**	9
MODULE II: Carbon Nano-composite: Definition of nanocomposites, Constituent of nanocomposites, General characteristics of particle reinforced composites- classification, Terminology used in fiber reinforced composites, Classification based on matrix and topology: Carbon nanotube (CNT) based nanocomposites, Graphene based nanocomposites, Carbon nano-diamond based nanocomposites, Hard nanocomposite coatings with amorphous carbon, Core-Shell nanocomposites.	**L1, L2, L3**	9
MODULE III: Synthesis of Carbon-nanocomposites: Covalent functionalization, non-covalent functionalization, wet synthesis, dry synthesis.	**L3, L4, L5**	9
MODULE IV: Nanocomposite Processing Methods: Nanocomposite processing: In-situ polymerization technique, Solution casting, Electro spinning, melt mixing, Filament Winding, Injection and compression molding, Vacuum bag moulding Method, Pultrusion Process	**L3, L4, L5**	9

Bachelor of Science (Honors/ Honors with Research) in Forensic Science
(Semester-III)

Course Code: SFCH2301	CRIME SCENE INVESTIGATION TECHNIQUES	L	T	P	C
Version 1.1	Date of Approval: December, 2023	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description
This course will help the students to learn the collection, packaging, preservation and transportation of serological evidence from crime scenes. The course will also overview the different types of forensic evidence and their examination.

Course Objective: This course will cover:

- Complete and thorough knowledge regarding the various aspects of forensic science
- Crime scene analysis and methods of searching of the crime scene.
- Fingerprint types and their methods of analysis.
- Blood and techniques for its identification
- Analysis of questioned documents.

Course Outcomes
On completion of this course, the students will be able to
CO1. Understand and describe the basic properties of different types of crime scenes.
CO2. Develop and identify different types of fingerprints
CO3. Apply advanced analytical methods of analysis of serological evidence.
CO4. Explain, identify and analyse the questioned documents.

Course Contents:

Modules	Blooms level*	Number of hours
Module 1: Crime Scene and its Management Defining a crime and crime scene, Introduction to Crime Scene Management, Handling clues and evidence. Types of crime scenes, Primary, Secondary crime scene, Mobile, Indoor and Outdoor crime scenes; Crime Scene documentation, Barrication of Crime Scene, Crime Scene Photography, Videography; Sketching; Notes making	L1, L2,L3	9
Module 2: Fingerprinting Techniques Types of fingerprints, Fingerprint characteristics: class and individual, Collection, lifting and preservation of fingerprints, Methods of lifting and developing latent fingerprints – Physical methods - Powder method (Black, silver, florescent, red, yellow), Iodine fuming etc. Chemical methods - Ninhydrin, Silver nitrate method.	L1, L2	9
Module 3: Biological fluid analysis techniques Application of Spectrophotometric method, chromatographic and immunological methods (Ring, Precipitin, Ouchterlony, reverse agglutination, normal/mixed agglutination).	L1, L2	9
Module 4: Questioned Documents examination questioned documents and its classification. Authentic Signatures, Simulated signatures, disguised signatures, traced signatures, and their	L1, L2, L3	9

(Semester-IV)

Course Code : SFCH2401	CYBER FORENSICS	L	T	P	C
Version 1.1	Date of Approval: December, 2023	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description
This course introduces undergraduate students with a comprehensive understanding of the methods used to investigate cybercrimes. Students will explore various types of cybercrimes, learn how to trace and analyze digital evidence, and understand the legal and ethical implications of cyber investigations.

Course Objective:
- To understand the nature and types of cybercrimes.
- To learn about digital evidence collection, analysis, and preservation in the context of cybercrimes.
- To gain hands-on experience with tools and techniques for cyber forensic investigations.
- To comprehend the legal and ethical dimensions of cyber forensics.

Course Outcomes
On completion of this course, the students will be able to
CO1: Understand various types of cybercrimes.
CO2: Become proficient in the legal and ethical aspects.
CO3: Effecting reporting and communication.
CO4: Become aware of evolving cyber crimes.

Course Contents:

Modules	Blooms level*	Number of hours
Module 1: Introduction to Cybercrimes and Cyber Forensics Overview of cybercrimes: definitions, types, and evolution; Introduction to cyber forensics: scope, importance, and basic principles; Case studies illustrating various cybercrimes.	L1	8
Module 2: Legal and Ethical Issues in Cyber Forensics Overview of laws and regulations impacting cyber forensics; Understanding Cyber Law Framework; Jurisdictional challenges; Legal Procedures and compliance; Ethics in Cyber Forensics; Privacy Concerns in Digital Investigations; Data Protection and Information Security	L1, L2	8
Module 3: Digital Evidence in Cyber Forensics Classification: Types of Digital Evidence, Digital Evidence in Various Environments, Evidence Identification and Collection, Special Considerations for Encrypted and Hidden Data, Preservation of Digital Evidence, Overcoming Challenges in Evidence Management	L1, L3	12
Module 4: Cyber Forensic Tools and Techniques Introduction to Forensic Tools and Software: Overview of commonly used tools in cyber forensics (e.g., Wireshark for network analysis, FTK for data recovery); Network Analysis Tools (e.g., Wireshark, tcpdump); Data Recovery Tools (e.g., Recuva, TestDisk); Email Analysis Techniques (e.g., MailXaminer); Analyzing Encrypted Data (e.g., John the Ripper, Hashcat	L2, L3	8

(Semester-III)

Course Code: SMTH2301	FUNDAMENTALS OF C PROGRAMMING	L	T	P	C
Version		2	0	0	2
Pr-requisites/Exposure					
Co-requisites					

Catalog Description
This course is aimed to provide a fundamental understanding of programming concepts. C Language is the language which used to write solution for the basic computational problem in the form of instructions and programs. The basic and advanced features of C Language including Data types, Operators, Conditional & Control Statements, Arrays, Strings, Structure & Union and File Handling will be introduced.

Course Outcomes : On successful completion of this course, all students will be able to:
CO1 : Understand binary, hexadecimal and octal number systems and their arithmetic.
CO2 : Define the purpose and structure of C Program for programming; identify and distinguish various datatypes and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
CO3 : Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
CO4 : Differentiate between various String Handling Functions;

Course Content

Modules	Blooms level*	Number of hours
Module-I: Computers fundamentals: definition, block diagram, diagram with components and characteristics, classification of computers History of C: Introduction of C, Basic structure of C program, Concept of problem solving, program design, debugging, Types of errors in programming, Number systems, Binary, octal, hexadecimal and their inter conversions.	L1, L2 and L3	08
Module-II: Element used in C, Header file, key words, identifiers, concept of variables, constants and data types in C, Input/output function, arithmetic, relational and bitwise operator, increment and decrement operator, unary operator, type casting, operator hierarchy, Conditional operator	L1,L2 and L3	08
Module-III: Decision making with if statement, else statement, if-else statement, nesting if, switch and break, go to statement. Decision making statement concepts of loops like while loop, do while loop, for loop, nested for loops, jumps in loop.	L1, L2 and L3	10
Module-IV: Functions: - use of inbuilt function, user defined functions, arrays:- one dimensional and n dimensional array, initialization of array, iterative programs using arrays, uses of array with combination of decision making operator, Function prototype, Return values and their types, function argument, recursion, Strings, array of strings.	L2, L3 and L4	10

Catalog Description
The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library.

Course Objectives : The objective of this course is to
1. Equip the students with concepts of Programming through C Language
2. Provide an overview of programming concepts like Functions, Arrays and String Handling

Course Outcomes : On completion of this course, the students will be able to
CO1 : Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).
CO2 : Construct C programs related to problems involving the usage of loops, arrays and functions.
CO3 : Construct C programs using string handling functions.

Course Content:

Modules/Topics Covered**	**Blooms level***	**Number of hours**
1. Basic programming to understand the working of C a. Write a program to calculate simple interest and amount. b. Write a program to swap two numbers using third variable. c. Write a program to calculate area of circle	L3	2
2. Programs using if, else if statements, switch case a. Write a program to check if the number is even or odd. b. Write a program to perform arithmetic operations using Switch Case statement. c. Write a program to demonstrate Greatest of 3 nos	L3	2
3. Programs using loops like while and do while (a) Write a program to find factorial of given no using do while statement. (b) Write a program to print prime numbers up to 'n'. (c) Write a program to sum of n natural no.	L3	2
4. Pattern programs using loops and multiple loops a. Write a program to print the following pattern using for loop 1 2 2 3 3 3 4 4 4 4 b. Write a program to print the following pattern using for loop	L3	2

Course Code: SMTH2401	**PROGRAMMING WITH MATLAB**	L	T	P	C
Version		0	0	6	3
Pre-requisites/Exposure	Algorithms and basic knowledge of programming				
Co-requisites					

Course Objectives : MATLAB is a scientific computing tool which covers almost all area of science and engineering. Students will be using MATLAB environment to solve various types of mathematical problems.

Course Outcomes : On completion of this course, the students will be able to
CO1 : Learn the basic concept of MATLAB
CO2 : Learn how to use matrix theory in MATLAB.
CO3 : Learn how to plot functions using plot functions and m file
CO4 : How to make script file and function file
CO5 : How to use if, while, do while, for loop etc

Catalog Description
The course will provides the students how to use MATALB in scientific and mathematical way

Course Content :

Programs	**Blooms Level**	**Hours**
1. Generating arrays and matrices and their manipulations 2. Introduction on few builtin functions 3. 2D and 3D plots, multiple plots using figure and subplot commands 4. Annotation of plots 5. Simple script files and editing them 6. Programs using If, else, nested if else, statements 7. Programs using switch case 8 Programs using loop structures 9 Introduction of function files 10 Introducing notion of sub-functions and nested functions 11 Solving IVPs using ode45 and other solvers	**L1, L2, L3, L4**

(Semester-III)

Course Code: SPHY2301	FUNDAMENTALS OF C PROGRAMMING	L	T	P	C
Version		2	0	0	2
Pr-requisites/Exposure					
Co-requisites					

Catalog Description
This course is aimed to provide a fundamental understanding of programming concepts. C Language is the language which used to write solution for the basic computational problem in the form of instructions and programs. The basic and advanced features of C Language including Data types, Operators, Conditional & Control Statements, Arrays, Strings, Structure & Union and File Handling will be introduced.

Course Outcomes : On successful completion of this course, all students will be able to:
CO1 : Understand binary, hexadecimal and octal number systems and their arithmetic.
CO2 : Define the purpose and structure of C Program for programming; identify and distinguish various datatypes and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
CO3 : Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
CO4 : Differentiate between various String Handling Functions;

Course Content:

Modules	Blooms level*	Number of hours
Module-I: Computers fundamentals: definition, block diagram, diagram with components and characteristics, classification of computers History of C: Introduction of C, Basic structure of C program, Concept of problem solving, program design, debugging, Types of errors in programming, Number systems, Binary, octal, hexadecimal and their inter conversions.	L1, L2 and L3	08
Module-II: Element used in C, Header file, key words, identifiers, concept of variables, constants and data types in C, Input/output function, arithmetic, relational and bitwise operator, increment and decrement operator, unary operator, type casting, operator hierarchy, Conditional operator	L1,L2 and L3	08
Module-III: Decision making with if statement, else statement, if-else statement, nesting if, switch and break, go to statement. Decision making statement concepts of loops like while loop, do while loop, for loop, nested for loops, jumps in loop.	L1, L2 and L3	10
Module-IV: Functions: - use of inbuilt function, user defined functions, arrays:- one dimensional and n dimensional array, initialization of array, iterative programs using arrays, uses of array with combination of decision making operator, Function prototype, Return values and their types, function argument, recursion, Strings, array of strings.	L2, L3 and L4	10

Catalog Description
The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library.

Course Objectives : The objective of this course is to
- Equip the students with concepts of Programming through C Language
- Provide an overview of programming concepts like Functions, Arrays and String Handling

Course Outcomes : On completion of this course, the students will be able to
CO1 : Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).
CO2 : Construct C programs related to problems involving the usage of loops, arrays and functions.
CO3 : Construct C programs using string handling functions.

Course Content:

Modules/Topics Covered**	**Blooms level***	**Number of hours**
1. Basic programming to understand the working of C d. Write a program to calculate simple interest and amount. e. Write a program to swap two numbers using third variable. f. Write a program to calculate area of circle	L3	2
2. Programs using if, else if statements, switch case d. Write a program to check if the number is even or odd. e. Write a program to perform arithmetic operations using Switch Case statement. f. Write a program to demonstrate Greatest of 3 nos	L3	2
3. Programs using loops like while and do while (d) Write a program to find factorial of given no using do while statement. (e) Write a program to print prime numbers up to 'n'. (f) Write a program to sum of n natural no.	L3	2
4. Pattern programs using loops and multiple loops c. Write a program to print the following pattern using for loop d. Write a program to print the following pattern using for loop	L3	2
5. Simple programs with the help of function c. Write a program to swap two numbers using call by value. d. Write a program to find factorial of a number with return with argument.	L3	2

Bachelor of Science (Honors/ Honors with Research) in Physics
(Semester-IV)

Course Code: SPHY2401	**INSTRUMENTATION PHYSICS**	L	T	P	C
Version	Date of Approval:	2	1	0	3
Pre-requisites/Exposure	Basic understanding of physics				
Co-requisites	Solid State Physics, Analog & Digital electronics				

Course Objectives
The objective of this course is to
 This course will be an introduction to some experimental techniques like clean room technology, vacuum science techniques and measurement.
 The course also covers various diffraction and microscopic techniques used extensively for crystal structure determination and morphology study respectively.

Course Outcomes
On completion of this course, the students will be able to
CO1: Understand the basics and significance of Clean Room Technology, Vacuum Technology and vacuum measurement.
CO2: Develop an understanding of various diffraction techniques such as x-ray, electron and neutron diffraction to determine the crystal structure of materials.
CO3: Understand the basics and significance various Spectroscopic Techniques.
CO4: Develop an understanding of various microscopic techniques such as TEM, SEM, AFM, STM to study the morphology
CO5:Apply key analysis techniques to typical problems encountered in the field.

Catalog Description
This course is intended to give insight of providing the basic knowledge of some experimental techniques like clean room technology, vacuum science, diffraction techniques and microscopic techniques.

Course Content:

Modules	**Blooms level***	**Number of hours**
Module I: Error analysis and Vacuum technology Description of error analysis, reporting and usage of uncertainties, Propagation of uncertainties, Error analysis: Instrumental and statistical uncertainties, propagation of errors, Estimation of Mean and Errors, Least Square Fitting, Calibration. Introduction to Vacuum Systems, Kinetic Theory of Gases, Production of Vacuums, Vacuum Pumps – Rotary, Diffusion, Terbo molecular, Pressure Measurement, Leak Detection, Specimen **Handling**	L1, L2, L3,	10
Module II: Instrumentation of Diffraction and Microscopic Techniques X-ray Sources – Crookes Tubes, Coolidge Tubes, Filters, mono chromator crystals, Multilayered monochromators and mirrors, Detectors-Photographic film, Gas detectors, Solid detectors, Diffractometers-The Debye-Scherrer and Hull diffractometer, Bragg-Brentano diffractometers,	L1, L2, L3, L4,	16

REMOTE SENSING AND GIS

Course Code: SESC2301 **Credit Units: 3**

Course objective: This course will develop the skills of students in the field of GIS and remote sensing. It will also give the basic concepts of remote sensing and principles associated with image acquisition and image processing. The role of GIS as a tool in environmental management and knowledge of GPS will be facilitated.

Course Content:

Module I: Remote sensing: Introduction, scope and components; Electromagnetic spectrum, its characteristics and interaction with environment; Absorption, Transmission, Scattering: Mie- sattering & Rayleigh Scattering; Platforms: Types of Platform (Ground, Air, Space) & Sensors (Active & Passive) Resolution: (Spatial, Temporal, Radiometric); Ground & Satellite Remote Sensing; Albedo, Atmospheric Windows; Aerial photography, Elements of Visual Image Interpretation (Tone, Texture, Size, Shape, Shadow, Pattern), Spectral Signature,

Module II: Techniques and applications of remote sensing in water resource management, Land Use land cover mapping, forest cover/ type mapping, habitat analysis, biodiversity characterization; Use of GIS and remote sensing in environmental monitoringand early warning
system; Raster Data; Vector Data; Indian Remote Sensing Satellite

Module III: Image classification and accuracy assessment: Supervised and Unsupervised classification; GPS and its applications; Digital image processing; Optical remote sensing, microwave remote sensing; Photogrammetry: Introduction, stereoscopic vision; Concept of Digital Elevation Model.

Module IV: Lab based project: Basics of Arc-GIS software, Data Downloading, observation, interpretation, Geo-referencing, mosaic. Classification of images: Supervised and Unsupervised; DEM analysis: generating slope map, aspect map and drainage network map and its applications.

Examination Scheme:

Components	A	FP	HA	EE
Weightage (%)	5	20	5	70

A: Attendance, FP: Field Project, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

SURVEYING AND MAPPING

Course Code: SESC2401 **Credit Units: 3**

Course objective: this course will develop the skills of students in the field of surveying and mapping. It will also give the basic concepts of surveying and mapping and to promote planned, economic and artistic development of town, cities and rural areas.

Course Content:

Module I: Introduction:

Significance and Principles of Surveying, Survey methods- Compass, Tape, Chain, Plain Table, Theodolite, Electronic Distance Meter, Total Station; Contouring and Plotting, Measurement of slope heights, aspects and gradients; Use of abney level, Global Position System; Geodetic survey, Datum, survey of India topographical maps.

Module II: Different type of maps: base maps, thematic maps. Main categories of thematic maps used in earth sciences; Techniques for legend and symbols in the maps; Scale of maps, classification of maps according to the scale, effect of the scale on the level of details of the information; Geographic projections and deformation of the real world in the maps; Coordinate systems;

Module III: Exercise of localization of points in the map using their coordinates; Representation of the 3rd dimension in the maps: isolines, elevation points; Exercises of estimation of slope and real distance in the maps; Landform identification from maps (identification of valleys, hills). Delineation of drainage basins. Construction of elevation profiles from maps.

Module IV: Lab Project Exercises of estimation of slope and real distance in the maps, Remote sensing and map based basic skilling, theoretical study and lab work followed by evaluation by Peer group.

Examination Scheme:

Components	A	FP	HA	EE
Weightage (%)	5	20	5	70

A: Attendance, FP: Field Project, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

- GPS Satellite Surveying: By Alfred Leic, Published by Wiley.
- Remote Sensing and Geographical Information System: By AM Chandra and SK Ghosh, Published by Narosa Publishing House.
- Surveying: Principles and Applications: By Barry F. Kavanagh, eight edition

Course Code: SBTH2301/ SBLS2301	COMPUTER APPLICATIONS FOR BIOLOGISTS	L	T	P	FW/ Proj	C
Version	**2023**	2	0	1	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description
This is an introductory course designed to provide fundamental knowledge and practical skills in computer applications. Students will learn essential concepts such as operating systems, word processing, spreadsheets, presentations, and internet basics. The course aims to equip participants with the foundational understanding needed to navigate and utilize computer applications effectively in various personal and professional settings.

Course Objectives
The course aims to provide students with a comprehensive understanding of fundamental computer concepts and applications. By the end of the course, students will be able to utilize word processing software for document creation and formatting, employ spreadsheet software for data organization and analysis, create engaging presentations using presentation software, and effectively utilize internet resources for research and communication purposes. Additionally, students will develop essential skills in file management, basic troubleshooting, and cybersecurity awareness. Through hands-on exercises and practical assignments, students will gain the confidence and competence to apply their newfound knowledge in real-world scenarios.

Course Outcomes (COs):
On completion of this course, the students will be able to
- Demonstrate basic computer literacy and computer application skills in word processing, spreadsheet usage, presentation design and delivery, internet usage, email etiquette, use of collaborative tools for communication, document sharing and collaboration.
- Develop awareness of cybersecurity risks, challenges, and protective measures.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Basic Computer Literacy General features of a computer system: characteristics of computers, Input and output devices, Application of computers in day-to-day life. Computer organization. Central processing Unit, Computer memory-primary memory and secondary memory. Secondary storage devices. Computer hardware and software, Machine language, high-level language, low level language, Application software and system software.	**L1, L2, L3**	10L+10P

Module II: Essential tools and skills using computers Word Processing Skills: (Create, format, and edit documents using word processing software, including features such as text formatting, page layout, and document templates). Spreadsheet Proficiency: (Use spreadsheet software to organize data, perform calculations, and create basic charts and graphs to visually represent numerical information). Presentation Design and Delivery: (Develop engaging and visually appealing presentations using presentation software, incorporating text, images, and multimedia elements. Deliver effective presentations with confidence, clarity, and appropriate use of visual aids). Internet and Email Skills: (Navigate the internet effectively to search for information, access online resources, and evaluate the credibility of online sources. Use email software to compose, send, receive, and manage email messages, including file attachments and email etiquette.) Collaboration and Communication Tools: (Utilize collaborative tools and platforms for online communication, document sharing, and project collaboration, such as cloud storage, messaging apps, and collaboration software). Cybersecurity Awareness: (Identify common cybersecurity threats, risks, and best practices for protecting personal and organizational information. Practice safe and secure online behaviors, including password management, data encryption, and awareness of phishing scams.)	**L1, L2, L3**	20L+20P

Co-requisites	Nil					

Catalog Description
This introductory course provides students with fundamental knowledge and practical skills in bioinformatics, an interdisciplinary field combining biology, computer science, and statistics. Students will explore the principles, tools, and applications of bioinformatics in biological research and data analysis. Through lectures, hands-on exercises, and projects, students will learn to analyze biological data, interpret results, and apply bioinformatics techniques to solve biological problems.

Course Objectives
This course aims to impart students a basic understanding of the concepts and principles of bioinformatics, along with the skill in using bioinformatics tools and databases for biological data analysis. This course will help the students develop critical thinking skills in interpreting and evaluating bioinformatics results, and apply bioinformatics techniques to address biological research questions.

Course Outcomes (COs):
On completion of this course, the students will be able to
- Understand the basic concepts and principles of bioinformatics.
- Gain proficiency in using bioinformatics tools and databases for biological data analysis.
- Develop critical thinking skills in interpreting and evaluating bioinformatics results.
- Apply bioinformatics techniques to address biological research questions.

Bachelor of Science (Honors/ Honors with Research) in Animation & Visual Graphics (Semester-III)
Bachelor of Arts (Honors/ Honors with Research) in Journalism & Mass Communication (Semester-IV)

Course Code: SANI2301/ SJRN2401	MEDIA ENTREPRENEURSHIP	L	T	P	FW/ Proj	C
Version	**2023**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description
This course explores the role of entrepreneurship in media and journalism, teaches the learner to observe and investigate acts of entrepreneurship in the media landscape, and leads the student through the process of building a proposal for a new business venture. The course is theoretically driven, as it delivers the concepts related to entrepreneurship and the entrepreneurial process and explores some of the issues and discussions around entrepreneurship in the media landscape through lectures and literature. Students then use that knowledge to analyze and present a case study that they consider to be media entrepreneurship and reflect on the entrepreneurial process in an individual essay.

Course Objectives
This course is designed to enable students to identify entrepreneurship, entrepreneurship processes, and entrepreneurs in the media landscape. The students should be able to analyze the opportunities, challenges, and the proposed value of entrepreneurial projects and products in media industries by presenting a proposed media start-up project. The learner should be able to propose a media start-up plan, including the business model, ideation, and tools for market analysis and would design a presentation that will convince an audience of peers to engage in a business entrepreneurship idea, selecting the appropriate (media) from for this presentation in the process.

Course Outcomes (COs):
On completion of this course, the students will be able to

- Define media entrepreneurship and the multiple career paths that fit within it.
- Understand how the media industry is changing to give rise to these paths.
- Conceive and develop an idea for a digital media startup by clearly stating a value proposition, conducting rigorous market and competitor research, and by evaluating revenue streams and startup funding options.
- Write, review, and revise a media business plan according to the conventions of the genre.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Intro to Media Entrepreneurship • Meaning, definition and concept of Entrepreneurship • Nature and scope of media entrepreneurship • Duties and responsibilities of the entrepreneurs • Challenges and risks in media Entrepreneurship • Intrapreneur vs entrepreneur • Freelancing as Entrepreneurship and Consulting as Business Models • Famous Media entrepreneur in India and around the World	**L1, L2, L3**	18

(Semester-IV)

Course Code: SANI2401	PORTFOLIO VIA WEB DESIGN	L	T	P	FW/Proj	C
Version	**2023**	2	0	2	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

In this course, students will learn how to create a professional and visually appealing web portfolio that showcases their skills, experience, and work samples. Using popular platforms like WordPress, students will design and build a personalized portfolio website to highlight their resume, showreels, rate card, and other key elements that demonstrate their capabilities to potential clients or employers. The course covers essential web design principles, portfolio structure, and customization techniques to ensure each portfolio is unique and engaging. By the end of the course, students will have a fully functional web portfolio that effectively communicates their talent and professionalism.

Course Objectives

- Understand the fundamentals of web design and portfolio structure.
- Create a personalized portfolio website using WordPress or similar platforms.
- Upload and organize a resume, showreels, rate card, and work samples in a user-friendly manner.
- Use templates and customization tools to make the portfolio visually appealing and professional.

Course Outcomes (COs):

On completion of this course, the students will be able to

Expected Outcome	Bloom's Taxonomy level
1. **Portfolio Creation and Design:** Students will be able to design and construct a fully functional web portfolio using WordPress or similar platforms, demonstrating proficiency in layout, navigation, and visual aesthetics.	L1, L2, L3
2. **Content Management and Organization:** Students will be able to upload, organize, and categorize essential portfolio content, including resumes, showreels, rate cards, and project samples, ensuring clear and user-friendly presentation.	L2, L3, L4, L5
3. **Customization and Branding:** Students will demonstrate the ability to customize WordPress templates to reflect personal or professional branding, incorporating elements like logos, color schemes, and typography that align with their identity.	L3, L4, L5
4. **Responsiveness and Accessibility:** Students will learn to create interactive prototypes that simulate user interactions, providing a realistic representation of the final product and allowing for usability testing.	L3, L4, L5

Course Content:

Modules	Blooms level*	Number of hours
Module 1: Introduction to WordPress and Web Portfolio Basics • **Getting Started with WordPress:** Installing WordPress locally or on a web server, creating a new site, and understanding the WordPress dashboard. • **Choosing and Installing Themes**: Exploring WordPress themes, selecting an appropriate theme for a portfolio, and customizing the theme settings. • **Basic Portfolio Structure:** Understanding the key components of a web portfolio (resume, projects, showreels, rate cards, etc.), and planning the overall structure. • **Creating Pages and Posts:** Learning the difference between pages and posts, creating essential pages (e.g., About, Projects, Contact), and setting up the portfolio's navigation menu. • **Hands-on Exercises**: Creating basic pages, setting up the homepage, and establishing site navigation.	**L1, L2**	8
Module 2: Customization and Branding • **Advanced Theme Customization:** Using the WordPress Customizer to adjust site elements like colors, fonts, headers, footers, and backgrounds to reflect personal branding. • **Working with Widgets and Plugins:** Adding and customizing widgets for extra functionality (e.g., social media links, contact forms), and exploring useful plugins for portfolios (e.g., portfolio galleries, SEO tools). • **Implementing Personal Branding:** Incorporating branding elements like logos, color schemes, and typography to create a unique identity. • **Hands-on Exercises**: Customizing a theme to align with personal branding and adding useful plugins for additional functionality.	**L1, L2, L3**	10
Module 3: Visual Design and Interaction Design • **Uploading and Organizing Portfolio Content**: Managing multimedia content (images, videos, PDFs), uploading showreels, and structuring the content for a professional presentation. • **Creating Engaging Portfolio Sections:** Designing project galleries, embedding multimedia content, and organizing portfolio items for easy navigation. • **Improving Content Quality:** Tips for writing compelling copy, creating effective project descriptions, and maintaining consistent tone and style across the portfolio. • **Hands-on Exercises:** Uploading and organizing content in the portfolio, creating project galleries, and refining portfolio sections for better user experience.	**L2, L3, L4, L5**	10
Module 4: Responsiveness, Accessibility, and Finalization • **Ensuring Responsive Design:** Testing the portfolio on various devices (desktop, tablet, mobile) to ensure a seamless experience across different screen sizes. • **Accessibility Considerations**: Implementing basic accessibility features like alt text for images, keyboard navigation, and color contrast for better accessibility.	**L1, L2, L3, L4, L6**	8

Prof. (Dr.) Anil Kumar

Bachelor of Arts (Honors/ Honors with Research) in Journalism & Mass Communication (Semester-III)

Course Code: SJRN2301	GRAPHICS & BASIC ANIMATION	L	T	P	FW/ Proj	C
Version	**2023**	2	0	2	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course introduces students to the art and concept of graphics and animation. This course focusses both on the theoretical and practical aspects of design principles & fundamentals of animation and it is reinforced through many hours of hands-on lab training designed to right from the start, train the students to be industry ready.

Course Objectives

The objective of this course is to:

- Enable the students to comprehend principles of design and graphics using a blended learning approach.
- To familiarize students with all aspects of software, both at the beginner as well as at an intermediate level
- To integrate seamlessly both theoretical as well as practical aspects of graphic design and animation such that the learner is able to instantly identify as well as appreciate design principles incorporated in the physical realm, be it print, net, web, film or television.
- To attain more than a level of familiarity with popular commercial as well as open-source software so that s/he can instantly start designing the moment a project is assigned.

Course Outcomes (COs):

On completion of this course, the students will be able to

- Be able to visualize and conceptualize layouts for print, web, video, and Multimedia.
- Completely proficient with all aspects of atleast one graphic design and animation software each, notably from Adobe Photoshop, Illustrator, After Effects and Animate CC. They can also be taught fundamentals of Corel Draw or InDesign, at a beginner level.
- Be proficient at delivery of design projects, both at a conceptual level and at the execution stage.
- Be able to work in a team delegating different aspects of production to team members and also work at a peer-to-peer level, so that professional quality work can be produced and exported.

Course Content:

Modules	Blooms level*	Number of hours
MODULE1: Design Concepts – traditional and digital Differences between traditional design, primarily for print as compared to designing for the web, the internet, and for television and film will be compared and contrasted, and how these inherent differences can be optimized for a specific media will be explained and elaborated upon.	**L1, L2, L3**	12

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

A broad overview imparted to each software with its distinguishing features and also reasons will be emphasized why a particular software is more suitable for a design project than others. The importance of maintaining inter-software compatibility as well as with market employed software will also be highlighted.		
MODULE2: What is Design? This module focuses exclusively on Design Elements, Design Principles and Aesthetics. How elements and principles help InDesign. Where, how and in which situation, these elements and principles are applicable. How do different design elements combine and mesh together to create an overall 'look' and feel for the published output – be it a web page, a mobile app or graphics for a social media video.	**L1, L2, L3**	12
MODULE3: Fundamentals of Design Software Editing of images, making selections and cropping, integration of text with graphics, as well as the importance of resolution, image size, pixel depth, and the different sizes and formats for print, web, broadcast, and internet mediums such as YouTube are all covered in this module. Also, the different image file formats such as jpg, png, tiff etc. along with transparency and scaling are also explained. From technical definitions we move on to the software itself, covering all basic aspects of industry standard software like Photoshop, Illustrator, Corel Draw and Adobe InDesign. An overview of the Affinity range of products like Designer and Photo is also covered so that the student can compare and contrast the differences and know which software to use in a given workplace situation.	**L3, L4, L5**	16
Module IV: Fundamentals of Animation This Unit moves into the domain of After effects. Since this package is used heavily by the Television Industry, many examples from this medium will be used to illustrate hard-to-grasp concepts. Various components of After Effects that will be taught in this module are: • The After Effects interface: Moving about and navigation in After Effects • AE tools and panels; how to customize and optimize them. • Keyboard shortcuts - how to use and customize. • Creating your first composition • The Timeline - navigation, panels, and scope of the timeline • Project windows and assets • Moving assets from project to timeline • Use of keyframes to create simple animations. • Principles of animation • Frame rates, speeding up and slowing down of animation. • Rendering and compression concepts. • Different kinds of movie formats • Exporting your first animation. • Settings and how they can be tweaked.	**L3, L4, L5**	16

Version	**2023**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description:

Course Objectives:

Course Outcomes (COs):
On completion of this course, the students will be able to:

- To introduce students about the emergence of branch of archaeology
- To explain the the origins of specific science of archaeology
- To develop critical thinking about the variety of archaeological evidence
- To develop the understanding among students about the concepts of various techniques
- To critically examine the various evidence about the explored sites
- To develop understanding in students about the chief features of sites and facts
- To develop the understanding of sites in Africa, Europe and India.
- Explore the various open sites in India.
- To introduce students about the importance of excavated sites in India.
- To develop critical thinking about the chief features of the sites in India.
- To develop critical understanding about understanding of methods of archaeology

Course Content:

Modules	Blooms level*	Number of hours
Module I: Defining archaeology; understanding its origins and development • Definition of the term and its implications • Description of Archaeology as Science	**L1, L2, L3**	18
Module II: The variety of archaeological evidence • Early Study of the site and collection of evidence techniques • Expiations about various archaeological method and techniques • The Science of archaeology in action and its implementation • The unearthing of different sites and its implications on World history • Application of Archaeological evidences in reconstruction of history • Explorations of the sites in India and its impact	**L1, L2, L3**	18
Module III: Survey and excavation of sites and features • The idea of field archaeology and its application to actual site Survey • The applied archology and its explanation	**L3, L4, L5**	18

Course code: SPOL2301	POLITICAL LEADERSHIP AND COMMUNICATION	L	T	P	C
Version 1.1	Date of Approval:	3	0	0	3
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Catalog Description
The course seeks to discuss the various aspects of political leadership and political communication to develop skills and training to the students.

Course Objectives
The objective of this course is to:
1. To enable students to develop an understanding of political communication in its linkages with leadership in democratic politics.
2. To understand the various aspects of election campaign studies, opinion polls and exit polls survey.

Course Outcomes
On completion of this course, the students will be able to
CO1: To understand the basics of political leadership.
CO2: Analyze the various aspects of political communication process and effective communication strategies.
CO3: Explain the changing role of communication in changing media environment particularly use of social media.
CO4: Demonstrate empirical and professional implications of Political Communication and to develop skills and orientations of different related professions.

Course Content:

Modules	Blooms level*	Number of hours
Module 1: Introduction to Political Leadership Themes, theories and typologies, participation and performance	L1, L2	9
Module 2: Basics of Political Communication Meaning, nature and scope, the political communication process: various actors and challenges, effective communication strategies	L1, L2	9
Module 3: Political Communication in a Changing Media Environment Social media and political communication, role of print media and television in shaping political opinion	L1, L2	9
Module 4: Empirical and Professional implications of Political Communication Basics of psephology, career options: political analysts, survey of opinion polls and exit polls	L1, L2	9

Course Code: SPOL2401	BASICS OF DEBUNKING FAKE NEWS & DISINFORMATION	L	T	P	Credits
Pre-requisites/ Exposure	**NIL**	3	0	0	3
Co-requisites	**NIL**				

Catalog Description

The course seeks to develop critical thinking to assess the validity and credibility of news and information and to develop many tools for enabling such assessment.

Course Objectives

- By enhancing their critical thinking abilities, participants will be better equipped to evaluate the accuracy and reliability of news and information they encounter.
- By understanding the tools and techniques, students will be able to recognize patterns and characteristics that can help them identify misleading or deceptive content.
- Participants will learn how to navigate fact-checking resources, employ digital verification techniques, and communicate their findings to others in a clear and persuasive manner.

Course Outcomes

CO1: Students will be equipped with the necessary tools to critically evaluate news sources, assess credibility, and identify potential red flags, thereby enhancing their ability to make informed decisions based on accurate information.

CO2: Students will be able to employ fact-checking techniques, utilize reliable verification tools, and effectively communicate their findings.

CO3: Students will have the knowledge and skills to protect themselves and others from falling victim to fake news and disinformation, fostering a culture of critical thinking, fact-checking, and responsible sharing of information.

(Semester-III)

Course Code: SENG2301	ACADEMIC WRITING & COMPOSITION	L	T	P	Credits
Pre-requisites/ Exposure	**NIL**	2	1	0	3
Co-requisites	**NIL**				

Catalog Description
In this course Academic Writing and Composition is designed to help the students develop the skills necessary for effective academic writing and help the students understand the ways that language and communication shape experience, construct meaning and foster community.

Course Objective

- To provide strategies and processes that successful writers employ as they work to accomplish specific purposes. knowledge and praxis of Academic writing in detail to the students
- To provide students with rhetorical foundations and prepare them for the demands of the professional writings

Course Outcome
After completing this course, the students will be able to:
CO1- Define the scope of Academic Writing and Composition.
CO2- Describe and explain the various writing processes and skills.
CO3- Demonstrate their academic writing skills by composing various types of academic writings.
CO4- Differentiate between various types of academic writings.

CO5- Develop critical thinking and successfully structure an argument in their writings.

Course Content:

Module	Blooms Level*	Credit Hours
Module 1: **Introduction to the Writing Process** Developing writing skills, writing comprehension **Writing in one's own words** Summarizing, Paraphrasing, condensation	L1, L2	12
Module 2: **a) Critical Thinking:** Syntheses, Analyses, and Evaluation **b) Structuring an Argument:** Introduction, Interjection, and Conclusion	L1, L2	12
Module 3: Citing Resources Editing, Book and Media Review	L1, L2	12

***Bloom's Level:** *L1- Knowledge; L2- Comprehension; L3- Application; L4- Analysis; L5- Synthesis, L6- Evaluation*

Version	**2023**	3	0	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalogue Description
Course Description: This class aims to equip students with advanced writing capabilities essential for thriving in academic, professional, and personal spheres. Expanding on fundamental writing skills, students will participate in various writing assignments focused on enhancing their capacity to communicate clearly, convincingly, and imaginatively. With rigorous practice and constructive critique, students will refine their expertise in professional writing and their aptitude for critically evaluating and generating a range of written materials. Special attention will be given to cultivating a polished writing demeanour. Furthermore, students will delve into the cultural and situational influences on writing conventions.

Course Objectives:
- Examine and create diverse written works, such as essays, reports, stories, and professional papers.
- Utilize self-editing and revising methods to enhance clarity, cohesion, and brevity in writing.
- Recognize the impact of cultural and situational factors on writing norms .
- Critically analyse texts and cultivate abilities in thorough reading and textual interpretation.
- Implement advanced writing abilities across academic, professional, and personal settings.

Course Outcomes (COs):
On completion of this course, the students will be able to
- students will be adept at crafting persuasive essays that effectively convey their ideas and viewpoints.
- students will refine their professional writing prowess, cultivating a distinct and impactful voice in their written communication.
- students will gain comprehensive insight into the cultural and contextual factors shaping professional writing practices, facilitating nuanced and culturally sensitive communication in diverse settings.
- students will implement advanced writing abilities across academic, professional, and personal settings.

Course Code: SFRE2401	INTRODUCTION TO TRANSLATION THEORY	L	T	P	FW/ Proj	C
Version	**2023**	3	0	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

The course "Introduction to Translation Theory" provides students with a comprehensive understanding of the theoretical foundations that underpin the practice of translation and interpretation. It covers various schools of thought and approaches to translation and interpretation, including equivalence theory, functionalist approaches, and cultural translation. Students explore key concepts such as fidelity, meaning, and adaptation in translation and interpretation, and critically analyse different translation and interpretation strategies and techniques. Through readings, discussions, and practical exercises, students gain insight into the complexities of translation and interpretation and develop the analytical skills necessary to assess and apply different theoretical frameworks in their work.

Course Objectives:

- Understand the definition and scope of translation, distinguishing between different types of translation (literal, literary, technical, etc.) and their respective purposes.
- Analyse and apply basic translation and interpretation techniques and strategies, such as literal, paraphrasing, and cultural adaptation, in various translation and interpretation scenarios.
- Evaluate the role of translators and interpreters as mediators between languages and cultures, considering their ethical responsibilities and cultural sensitivities.
- Compare and contrast major theoretical approaches in translation studies, including functionalist, descriptive, and sociocultural perspectives, and analyse their implications for translation practice.

Course Outcomes (COs)

On completion of this course, the students will be able to

- Understand the foundation of the principles underlying the translation and interpretation process.
- Explore how different theoretical lenses shape our understanding of the translation and interpretation process.
- Understand different approaches to achieving equivalence in translation and interpretation.
- Identify challenges in achieving equivalence between source and target texts, including lexical gaps, cultural nuances, and register differences.

Course Content:

Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Course Description: Writing is not only a crucial competency, but also a quintessential prerequisite to succeed in life in general, and academics in particular. This course seeks to help students to hone their advanced writing skills. Therefore, the course will primarily focus on the non-fiction, academic aspect of writing. Conscious of the fact that writing is a critical, reflexive process, and hence, it requires practice and perseverance to evolve, this course aims at striking a balance between the theoretical and practical aspects of writing. In the framework of this aim, the course begins with the ***semantic aspect*** of writing, which is language specific. Here the major themes of discussion will be grammar and structure of texts belonging to various genres. Learning nitty-gritties of indexing and referencing will be other salient themes of this section. Following it, the course will then delve into the ***semiotic aspect*** of writing and touch upon topics like paraphrasing, plagiarism and punctuation etc. Finally, the concluding part of this course will deal with the ***pragmatic aspect*** of writing. The emphasis of this part will be on recognizing the purpose and the context of writing, so that the desired text can be drafted by the students. This section will be mainly practical in nature where students will be first introduced to various contexts of writing and the genres corresponding to them, like writing expose, report writing, writing to seek grants, writing motivation letters among other such needs in class, and then they will be given situations to write about. It goes without saying that a good writer shall always be a good reader, a good listener first; therefore reading exercises in group, listening to podcasts and summarizing the key ideas therein with pen and paper will be an implicit part of this course.

Course Objectives:

- Inculcate advance level proficiency of grammar, syntax, and various referencing styles in students.
- Enrichment of domain specific vocabulary along with their contextual usage.
- Awareness of the rhetorical devices and various ways of argumentation.
- Analyse and produce a variety of written texts, including essays, protocols, reports, summaries, and other such professional documents.
- Learn and master editing and revision techniques to improve clarity, coherence, and conciseness.
- Engage critically with texts and develop skills in close reading and textual analysis.
- Understand the cultural and contextual influences on writing practices and vice versa.
- Apply advanced writing skills in professional and personal contexts alike.

Course Outcomes (COs):

On completion of this course, the students will be able to

- Students will demonstrate advanced level of grammatical competence and will be able to express their views in a cogent and coherent manner.
- Students will be well versed with techniques of writing texts critically and convincingly.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Students will apply the referencing styles for their academic writing. Additionally, they will learn about the various possibilities of plagiarism as well as the ways to check and eliminate them from their writings.
- Students will gain comprehensive insight into the cultural and contextual nuances, enabling them to write in a politically correct and gender sensitive manner.

Course Content:

Modules	Blooms level*	Number of hours
Module 1: The Semantics of Writing: How do we write? The focus of this module will be to impart advanced level of grammar along with other structural nuances needed for effective writing. The students will critically engage themselves with complex sentence structures, verb tenses, mood and voice, parallelism, and punctuation through targeted lessons and exercises. The emphasis will be on identifying and correcting common grammatical errors and understanding how syntax as well as citation affects the writing process, as far as professional writing is concerned. Another highlight of this module will be to equip students with writing etiquettes, particularly valuable for day-to-day communication in a professional set-up.	**L1, L2,L3, L4**	15
Module 2: The Semiotics of writing: What do we write? As the titles suggests, this module will be primarily dedicated to in-depth discussion of what meaning is; what constitutes this meaning; how is it created and communicated; and finally what can happen if one fails to decipher vis-à-vis disseminate the meaning. Rhetoric is an important aspect of writing that compensates the gap created during the transmission of oral content into the written, and thus, also helps to get close to the meaning. Therefore, awareness of rhetorical devices along with advanced level vocabulary, like idiomatic and phrasal expressions will be the key take away of this module.	**L1, L2, L3,L4**	15
Module 3: The Pragmatics of Writing: Why do we write? In this module the emphasis will be on putting the skills gained in class thus far on test. To that end, the students will learn about the various contexts that require advanced writing skills to succeed professionally. Keeping practice of more and more writing at the center, this module will delve into the intricacies of professional writing. For example, drafting a professional CV; writing expose, research papers, motivation letters, and reports of events; commercial correspondence mainly through email in contemporary times among various other such occasions that can contextually arise time to time in students' life. Cognizant of the continuity needed to master writing skills, writing a protocol of every lecture held will be a compulsory component of this module for every student.	**L1, L2, L3, L4, L5, L6**	15

Co-requisites	Nil					

Catalog Description

Course Description: This course takes students on a reflexive journey of translation as an everyday practice as well as an academic discipline. Since translation is as old a practice as the need to share and communicate, the course will begin with offering a critical insight into the brief history of translation as a field of study. Here, various thinkers and their ideas about translation will offer a theoretical foundation for the discussions to follow in the course. The course will then shift its focus on the practical aspect of translation and discuss the various contexts that require translation; the strategies for doing an effective translation; the tools and techniques available to tackle challenges arising while doing a translation. Towards the end of this course students will critically engage themselves with the crucial concepts of translation along with their application in professional walk of life. The major themes of discussion in this section will be the role of culture in doing a translation, as in translating culture vis-à-vis the culture of translation and its impact on peoples' lives. Starting with history of translation studies, through offering an insight into the various methods of translation, to leaving students with critical, reflexive deliberations on philosophical and political implications of translation practices, the course seeks to prepare students to take a plunge into oceanic world of translation with some sense of orientation gained in this course.

Course Objectives:

- Understand the definition and scope of translation, distinguishing between different types of translation (literal, literary, technical, etc.) and their respective purposes.
- Analyse and apply basic translation and interpretation techniques and strategies, such as literal, paraphrasing, and cultural adaptation, in various translation and interpretation scenarios.
- Evaluate the role of translators and interpreters as mediators between languages and cultures, considering their ethical responsibilities and cultural sensitivities.
- Compare and contrast major theoretical approaches in translation studies, including functionalist, descriptive, and sociocultural perspectives, and analyse their implications for translation practice.

Course Outcomes (COs)

On completion of this course, the students will be able to

- Understand the foundation of the principles underlying the translation and interpretation process.
- Explore how different theoretical lenses shape our understanding of the translation and interpretation process.
- Understand different approaches to achieving equivalence in translation and interpretation.
- Identify challenges in achieving equivalence between source and target texts, including lexical gaps, cultural nuances, and register differences.

Course Content:

Modules	Blooms level*	Number of hours
Module 1: Translation theories This module examines key theoretical frameworks in translation studies. Topics covered include the historical development of translation theory, major theoretical approaches (such as functionalist, descriptive, and sociocultural approaches), and interdisciplinary perspectives on translation.	**L1, L2, L3**	15
Module 2: Initiation to Interpretation This module introduces students to the fundamental concepts of interpretation. Topics covered include the basic techniques of interpretation, and the role of interpreters in bridging linguistic and cultural divides.	**L1, L2, L3**	15
Module 3: Application of translation and interpretation theories In this module, students will translate texts from French to English and English to French. The students will also be required to do consecutive and simultaneous interpretation of discourses.	**L1, L2 L3, L5, L6**	15

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

(Semester-III)

Course Code: SSPA2301	ADVANCED WRITING SKILLS	L	T	P	FW/ Proj	C
Version	**2023**	3	0	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Course Description: This course is designed to provide students with the advanced writing skills necessary for success in academic, professional, and personal contexts. Building upon foundational writing competencies, students will engage in a variety of writing tasks aimed at refining their ability to communicate effectively, persuasively, and creatively. Through intensive practice and feedback, students will develop their mastery of grammar, syntax, vocabulary, and rhetorical strategies, as well as their ability to critically analyse and produce diverse types of written texts. Emphasis will be placed on developing a sophisticated writing style. Students will also explore the cultural and contextual factors that shape writing practices.

Course Objectives:

- Develop advanced proficiency in grammar, syntax, and punctuation.
- Expand vocabulary and employ rhetorical devices to enhance writing style.
- Analyse and produce a variety of written texts, including essays, reports, narratives, and professional documents.
- Practice self-editing and revision techniques to improve clarity, coherence, and conciseness.
- Engage critically with texts and develop skills in close reading and textual analysis.
- Understand the cultural and contextual influences on writing practices.
- Apply advanced writing skills in academic, professional, and personal contexts.

Course Outcomes (COs):

On completion of this course, the students will be able to

- students will have refined their grammatical skills and gained confidence in expressing themselves with precision and fluency.
- students will be adept at crafting persuasive essays that effectively convey their ideas and viewpoints.
- students will refine their professional writing prowess, cultivating a distinct and impactful voice in their written communication.
- students will gain comprehensive insight into the cultural and contextual factors shaping professional writing practices, facilitating nuanced and culturally sensitive communication in diverse settings.

Course Content:

Modules	Blooms level*	Number of hours
Module 1: Refining Grammar and Syntax	**L1, L2**	15

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

In this module, students will focus on advanced grammar and syntax to improve the clarity, precision, and sophistication of their writing. They will review complex sentence structures, verb tenses, mood and voice, parallelism, and punctuation through targeted lessons and exercises. The emphasis will be on identifying and correcting common grammatical errors and understanding how syntax affects writing effectiveness.		
Module 2: Crafting Compelling and Persuasive Arguments In this module, students will focus on the art of crafting compelling arguments and persuasive essays. Through the study of rhetorical strategies, logical reasoning, and persuasive techniques, students will learn how to construct well-reasoned arguments, support their claims with evidence, and engage readers effectively. Students will practice writing persuasive essays on a variety of topics, refining their ability to persuade and influence through written communication.	**L1, L2, L3,L4**	15
Module 3: Professional Writing Skills In this module, students will delve into the intricacies of professional writing, honing skills essential for job applications, CV writing and crafting commercial correspondence. Exploring various genres of professional writing such as cover letters, follow up emails and report writing.	**L3, L4, L5**	15

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Course Code: SSPA2401	INTRODUCTION TO TRANSLATION THEORY	L	T	P	FW/ Proj	C
Version	**2023**	3	0	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description
The course "Introduction to Translation Theory" provides students with a comprehensive understanding of the theoretical foundations that underpin the practice of translation. It covers various schools of thought and approaches to translation, including equivalence theory, functionalist approaches, and cultural translation. Students explore key concepts such as fidelity, meaning, and adaptation in translation, and critically analyse different translation strategies and techniques. Through readings, discussions, and practical exercises, students gain insight into the complexities of translation and develop the analytical skills necessary to assess and apply different theoretical frameworks in their translation work.

Course Objectives:
- Understand the definition and scope of translation, distinguishing between different types of translation (literal, literary, technical, etc.) and their respective purposes.
- Analyse and apply basic translation techniques and strategies, such as literal translation, paraphrasing, and cultural adaptation, in various translation scenarios.
- Evaluate the role of translators as mediators between languages and cultures, considering their ethical responsibilities and cultural sensitivities.
- Trace the historical development of translation theory, identifying key milestones and influential figures in the field.
- Compare and contrast major theoretical approaches in translation studies, including functionalist, descriptive, and sociocultural perspectives, and analyze their implications for translation practice.
- Critically assess the concept of translation equivalence, exploring its linguistic, cultural, and pragmatic dimensions.

Course Outcomes (COs)
On completion of this course, the students will be able to
- Understand the foundation of the principles underlying the translation process.
- Explore how different theoretical lenses shape our understanding of the translation process.
- Understand different approaches to achieving equivalence in translation
- Identify challenges in achieving equivalence between source and target texts, including lexical gaps, cultural nuances, and register differences.

Course Content:

Modules	Blooms level*	Number of hours
Module 1: Fundamentals of Translation	**L1, L2, L3**	15

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

This module introduces students to the fundamental concepts of translation theory. Topics covered include the definition of translation, basic translation techniques, and the role of translators in bridging linguistic and cultural divides.		
Module 2: Theoretical Perspectives on Translation This module examines key theoretical frameworks in translation studies. Topics covered include the historical development of translation theory, major theoretical approaches (such as functionalist, descriptive, and sociocultural approaches), and interdisciplinary perspectives on translation.	**L1, L2, L3**	15
Module 3: Approaches to Translation Equivalence In this module, students explore the concept of translation equivalence and its various interpretations. Topics covered include linguistic and cultural aspects of equivalence, as well as the challenges of achieving fidelity to the source text while adapting to the target language and culture.	**L3, L4, L5**	15

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Bachelor of Science (Honors/ Honors with Research) in Dietetics & Applied Nutrition (Semester-III)

HEALTHY AND SUSTAINABLE FOOD CHOICES

Course Code- SDAN2301 **Credit Units: 03**

Course Contents:

Module I: Healthy food choices

Identification of healthy and unhealthy foods and understanding the immediate food environment

- Food labels and basics of nutrient profiling models to classify foods as HFSS
- Nutrient profiling of commonly consumed food items
- Exploring the food environment by mapping the food outlets and food available near home and college

Module II: Food portion sizes and related factors

Understanding food portion sizes and its relation to nutrient density

- The concept of portion/serving sizes and portion control
- Estimation of energy and nutrient density of selected food products using nutrient composition database

Module III: Basics of food preparation

Planning and preparation of healthy and nutritious dishes

Planning and preparation of the following:

- Snacks
- Soups and Salads
- Desserts
- Meal combinations

Module IV: Sustainability and healthy food

Linking the concept of healthy eating with sustainability

- Identification of nutritious food sources which have minimal impact on the environment
- Case study on understanding the food supply chain and carbon footprints of any commonly consumed foods.

UTILIZATION OF FOOD WASTE MANAGEMENT

Course Code: SDAN2401 **Credit Units: 03**

Course Contents:

- Identification of waste from agriculture and food processing (Dairy/ Meat/ Fruits Vegetables / Alcoholic beverages/ cereals)
- Study and layout of wastewater treatment system (ETP)
- Identification of co-products from the F&V industry, estimation and utilization to develop value-added products (pectin, banana fibre, lycopene from tomato waste, watermelon/ pumpkin rind).
- Identification of waste from the animal industry and utilisation to develop value-added products (gelatin, eggshell).
- Identification of various co-products from the dairy industry, estimation and utilization to develop value-added products (utilisation of ghee residue, buttermilk beverage, whey).
- Identification of co-products from cereal industry, estimation and utilization to develop value-added products (cereal husk, wheat fibre).
- Determination of physicochemical properties of wastewater.
- Production of alcohol/ acetic acid from waste material.

Bachelor of Science (Honors) in Medical Laboratory Technology
(Semester-III)

Course Code: SMLT2301	LABORATORY MANAGEMENT	L	T	P	FW/ Proj	C
Version	**2024**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description:
This syllabus aims to prepare students for effective management and ethical practices in clinical laboratory settings through a comprehensive curriculum. It covers fundamental management principles, decision-making strategies, and leadership development tailored to laboratory environments. Emphasis is placed on ethical conduct, safety protocols, and adherence to good laboratory procedures to ensure the integrity of results and patient safety. Additionally, students are introduced to laboratory information systems, financial management principles, and quality assurance methods essential for efficient laboratory operations. Through this program, students will develop the skills necessary to lead teams, manage resources, and uphold ethical standards in clinical laboratory practice.

Course Objectives:
This course is designed to enable students to the basics of management, decision-making, and leadership. Emphasize ethical practices, safety, and good laboratory procedures. Introduce laboratory information systems, financial management, and quality assurance. Promote ethical behavior in laboratory procedures, record-keeping, procurement, and audits. Foster leadership skills and teamwork in a clinical laboratory setting.

Course Outcomes (COs):
CO1: Understand foundational management principles relevant to clinical laboratory settings.
CO2: Apply strategic management concepts to address challenges in clinical laboratories
CO3: Utilize planning tools and techniques for efficient laboratory management
CO4: Evaluate decision-making strategies and employ conflict resolution techniques in clinical laboratory contexts.

Course Content:

Modules	Blooms level*	Number of hours
Module 1: Management Principles and Ethical Practices • Introduction to management principles • Strategic management • Foundations of planning • Planning tools and techniques • Decision making, conflict, and stress management • Managing change and innovation • Understanding groups and teams • Leadership • Time management • Cost and efficiency	**L1, L2, L3,L4**	12

Bachelor of Science (Honors/ Honors with Research) in Molecular Medicine & Stem Cell Technology
(Semester-III)

Course Code: SSCT2301	BIOINSTRUMENTATION IN MOLECULAR MEDICINE & STEM CELL BIOLOGY	L	T	P	FW/ Project	C
Version	**2023**	3	0	0	0	3
Pre-requisites/Exposure	Pre exposure of mathematics at least at high-school level is preferred. Students are requested to go through the textbooks and reference books mentioned, before attending the class.					
Co-requisites	Student will be asked to prepare assignments/presentations on recent publication in concerned subject/ topic selected by instructor to provide a platform of discussion on what is been discovered and where field needs advancement.					

Catalog Description

1. Students will acquire knowledge about safe laboratory practices.
2. Students will also learn about bio-analytical instruments, principles of their proper functioning, and analysis methods applied to biological data obtained in experimental techniques.

Course Objective:

The course is deigned to develop the understanding of electromagnetic radiation, absorption spectrum, Beer's law and Lambert's law, principle, working and applications of spectrophotometer, concepts of chromatography and concept of partition coefficient and application of various chromatographic techniques, Centrifugation and Electrophoresis-Principles and applications, Importance of radioactivity in biological studies, GM counters and Scintillation counting.

Course outcome

Upon successfully completing this course the students could be able to:

- Understand and explain the use of basic biomedical instrumentation, principles and techniques of preparative analytical centrifugation, include ultra centrifugation, sedimentation analysis and gradient centrifugation.
- Understand the theory and application of Chromatography techniques, Gel filtration, ion exchange, affinity, HPLC and electrophoresis.
- Know the theory and application of UV and visible spectroscopy. Fluorescence spectroscopy, NMR, X-ray diffraction, MS, MALDI-TOF, and application radioisotopes in different techniques.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Sampling and sample preparation Sample fixing for various analytical applications and sample processing. Principles of microscopy, Light, dark field, fluorescence microscope, confocal microscope, transmission and Scanning electron microscopy, microtomy and analysis and measurement of image. Fluorescence activated cell sorter (FACS) basic principles and applications.	L1, L2, L3, L4	9

Module II: Biotechniques for DNA, RNA, and Proteins Electrophoresis of DNA, RNA and proteins. Capillary electrophoresis, Two-dimensional electrophoresis, Southern blotting, Northern blotting, Immunoprecipitation, Western blotting. Sequencing, Next Generation Sequencing, RNA-Seq. etc.	L1, L2, L3, L4	9
Module III: Centrifugation techniques Introduction, Basic principle of sedimentation, centrifuges and their uses, Density gradient and analytical centrifugation. Spectroscopy techniques: UV and visible spectroscopy, infrared and atomic absorption spectroscopy, fluorescence spectroscopy, mass spectrometry, MALDI-TOF, nuclear magnetic resonance and electron spin resonance spectroscopy.	L1, L2, L3, L4	9
Module IV: Chromatography Chromatography: Theoretical basis of chromatographic separations. Column, Thin layer, Paper, Normal phase and reverse phase chromatography, Ion-exchange, Affinity and Gas Chromatography, High performance liquid chromatography (HPLC) and GLC.	L1, L2, L3, L4	9
Module V: Introduction to mass spectroscopy radioisotopic techniques Principles of X-ray diffraction and X-ray Crystallography, Theory and application of UV-VIS, IR, NMR, Fluorescence, Atomic absorption spectroscopy, X-ray diffraction, Introduction to radioisotopes, detection, measurement and uses of radioisotopes, counting efficiency and autoradiography, Biotechnological applications	L1, L2, L3, L4	9

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Catalog Description

The basic principles and practices of biosafety are examined. This course teaches the identification, handling, and containment of potentially hazardous biological materials, including microorganism and recombinant DNA.

Course Objective:

The objective of the course is to teach the students safety handling and regulation laboratory facility, how to keep the record, analyze laboratory data with accuracy. Also, to educate them about the ways to minimize the errors related with handling of laboratory accessories and equipment's, and to learn the standard operating procedures (SOPs).

Course Outcomes

- To be aware of rules and regulations setup at the university level for working in the lab specially related to biosafety
- To know the social and legal state of the society with respect to genetically engineered products or other outcomes of biotechnology
- Work according to the safety precautions set up by international bodies while handling bio-hazardous material

Course Contents:

Modules	**Blooms level***	**Number of hours**
Module-I: Introduction to GLP Introduction to GLP, History, Scope, Fundamental points of GLP (Resources Characterization, Rules, Results, Quality assurance)	L1, L2, L3	12
Module-II: Laboratory rules and Protocols General Rules/Protocols for Lab Safety measures, Precaution and Safety in handling of chemicals, Laboratory tools, Glassware and instruments. Internal and External Audit	L1, L2, L3	12
Module-III: Laboratory hierarchy and SOP Levels of Laboratories	L3, L4, L5	12

OPERATIONS RESEARCH

Course Code: MGT2551 **Credit Units: 03**

Course Objective:
The objective of this paper is to make students familiar with basic concepts and tools in Operations Research. These techniques assist in solving complex problems and help in decision making.

Course Contents:

Module I: Introduction
Introduction to Operations Research, Definition, scope and limitations of Operations Research

Module II: Linear Programming
Linear Programming – Basic Concepts, Model formulation; Solution methods – Graphical Solution method, Simplex method (problems involving only upto 3 constraints and of inequality <), Application of LPP in business decision making.

Module III: Transportation Problem
Transportation problem- Initial Basic feasible solution (North - West corner rule, Vogels approximation method), Test for optimality (Modified Distribution (MODI) method)

Module IV: Assignment Problem
Assignment Problem – Introduction, Approach of the Assignment model, Solution Methods (Hungarian method)

Module V: Game Theory
Game Theory - Concept and definition; Solution methods of Pure Strategy games (with saddle point), Significance of Game Theory.

Module VI: Queuing & Simulation
Introduction, Elementary queuing system, Introduction to Single – channel queuing model (with Poisson arrivals and Exponential service times), (no numerical); Introduction to Simulation, applications, advantages and drawbacks of simulation, Introduction to Monte – Carlo Simulation, Role of computers in Simulation.

Examination Scheme:

Syllabus - Semester Second

EXPLORING BUSINESS OPPORTUNITY

Course Code: MGT2252 **Credit Units: 03**

Course Overview

The goal of this programme is to provide a space and platform for discovery, both self discovery and opportunity discovery. Students will discover their strengths in terms of an entrepreneurial founding team and learn basics such as opportunity discovery, prototyping, competition analysis, and early customer insights and participate in on-line and campus activities and events such as idea competitions, business plan challenges, etc.

Course Contents:

Module-I: Self-Discovery

Natural born entrepreneur, the reluctant entrepreneur, the hidden traits, discovers your own strength.

Module-II: Idea Generation

Sources of business ideas, how to find & assess ideas? Where to find data for ideation? What is a good problem? Opportunity recognition.

Module-III: Idea Evaluation

Design thinking for finding solutions, prototyping, idea evaluation, entrepreneurial Outlook, value proposition design, customer insight, ideas development , capstone project presentation.

Module-IV: Feasibility Analysis

Product/Service Feasibility Analysis, Industry & competition analysis, environment analysis, financial feasibility analysis.

Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; **HA -** Home Assignment; **V** - Viva; **CT**- Class Test; **A** - Attendance; **EE** - End Semester Examination)

Learning Outcomes

At the end of the course, the students will be able to:

- Further discover their strengths and weaknesses in terms of qualities and traits required to be a successful entrepreneur in the context of a founding team.
- Identify gaps in terms of qualities and traits required to be an entrepreneur, if any, and make a personal action plan to close those gaps.
- Develop the entrepreneurial mind-set further in terms of acquiring a business focus, creative thinking, risk-taking ability, and more.
- Learn about opportunity discovery and evaluation of viable business ideas for new venture creation.

Syllabus - Semester Third

DEVELOPING A BUSINESS MODEL

Course Code: MGT2352 **Credit Units: 03**

Course Overview

The goal of this program is to take the students from the MVP (Minimum Viable Product) stage to the Business Model stage, i.e. the students will acquire the skills required to transform their MVP into a business model. In this course, they will start building their teams by finding co-founders and perhaps even hiring. They will transform their business idea into the Business Model Canvas and will use it to further refine their MVP. They will also set up a digital presence and learn to use promotional channels and distribution channels to engage and serve their customers. Additionally, they will get started with various legal and operational aspects as well as initial funding concepts such as bootstrapping.

Course Contents:

Module-I: Team

Finding your team, art of team formation, teamwork planning, chief mentor/ founder & Co founders, team formation, and delegation of work.

Module-II: Preparation of Business model/Plan

Meaning and significance of a business plan, components of a business plan, and feasibility study, Iterating the MVP, Digital Presence for Ventures, Clarifying the value proposition, Guidelines for writing BP, pre- requisites from the perspective of investor.

Module-III: Business Model

The importance and diversity of business model, how business model emerge, potential fatal flaws of business models, components of an effective business model, core strategy, strategic resources, partnership network, customer interface.

Module-IV: Product/ Market Fit

Understanding basics of unit economics, cost and profitability, Refining the product/service, Establish the success and operational matrix, Starting Operations.

Customer Validation: Evaluate the efficiency with which customers can be captured and kept, Early insights on cost of customer acquisition, Other Stakeholder Validation, Customer Development and Experience.

Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; **HA -** Home Assignment; **V** - Viva; **CT**- Class Test; **A** - Attendance; **EE** - End Semester Examination)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Learning Outcomes

At the end of this course, the students will be able to:

- Acquire the skills and knowledge related to the various phases in venture creation process such as creating a business model and building a prototype.
- Practice entrepreneurship by forming and running a Campus Venture as part of a team.

Learning Methods

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects; and Practical Experiences including challenges, internships and apprenticeships.

Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Learning Outcomes

At the end of the course, the students will be able to:

- Launch a sustainable venture with a valid business model, with co-founder(s) on or off campus, and real paying customers.
- Create and validate a business model and business plan for their idea.
- Develop the Minimum Viable Product (MVP).
- Implement an inexpensive and optimum Go-to-Market plan for their business.
- Craft and present an effective business pitch for investors, partners and other stakeholders.
- Gain in-depth knowledge and relevant skills about a specific vertical.
- Students build a prototype or service, generate jobs and revenue.

Learning Methods

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects including Student Venture; and Practical Experiences including challenges, internships and apprenticeships.

Syllabus - Semester Fifth

ADVANCED PROGRAMME IN ENTREPRENEURSHIP: GROWTH

Course Code: MGT2552 **Credit Units: 03**

Course Overview

The students who already have their own venture will take this course to focus on a growth agenda. They will learn advanced concepts and build sustainability in their venture in various ways such as Growth Financing, process refinement, and scalability.

Course Contents:

Module-I: Growth Opportunities

Characteristics of high growth new ventures, strategies for growth, and building the new venture capital, discovering and assessing opportunities for growth, developing a growth mind-set and visioning for growth, review the robustness and relevance of business model vis-à-vis current market situation, map financing decisions to business models and reiterating business models

Module-II: Retention & Expansion Strategies

Dealing with stagnation of customer base and developing customer base: expansion to new markets – options and strategies, product Life Cycle – Product Road Map; Getting to Plan B, p*roject to Process:* Build, adapt, test, and establish key processes and systems that enable efficiency, continuous and sustained innovation

Module-III: Developing the organizational capabilities for growth

Develop strong leadership capabilities, ability to delegate and manage key leadership tasks. o Streamline operations and organizational design to accommodate growth, Implement new and effective approaches to marketing and communication for customers, suppliers, and employees, Acquire new resources for strategic growth: executive hires.

Module-IV: Planning and streamlining financial/ Legal processes:

Managing cash for growth, Balance between profitability and growth costs, Role of business services – accountant, lawyer, Understanding legal requirements, and compliance issues, Exit options :Evaluating opportunities for acquisition; Growth financing, Scalability & efficiency improvements, IPR.

Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; **HA -** Home Assignment; **V** - Viva; **CT**- Class Test; **A** - Attendance; **EE** - End Semester Examination)

Learning Outcomes

At the end of the course, the students will be able to:

- Manage and grow their business in terms of jobs and revenue.
- Make a Growth Plan and pitch it to all stakeholders (investors, partners, key employees etc.).
- Sign up for advanced support for entrepreneurs – Mentor Platform.
- Identify key drivers of growth in a venture.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Develop a growth mind-set.
- Understand the basics of organization and team building; and establishing policies to hire and retain staff.
- Understanding legal and compliance issues related to their business.
- Present a pitch for funding their growth plan.

Learning Methods

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects; and Practical Experiences including challenges, internships and apprenticeships.

Syllabus - Semester Sixth

ADVANCED PROGRAMME IN ENTREPRENEURSHIP: EXPANSION

Course Code: MGT2652 **Credit Units: 03**

Course Overview

The students who have a sustainable venture will get ready for the expansion phase. They will focus on expansion and go on the path of creating a high-performance company. They will learn advanced concepts such as franchising, renewal, and profit maximization.

Audience

This course will be offered to all the students who have gone through Advanced Programme in Entrepreneurship. It is suitable for students, keen to continue to grow their ventures. deally, they will have a reasonable understanding of growth challenges and how to tackle them and would seek to expand further through inputs from this course.

Course Contents:

Module-I: Expansion model – Geographical/Franchising/Licensing routes to new market expansion

Module-II: Maximizing Profits- Testing price elasticity, Cost reduction through scaling up, Expanding offerings, other revenue streams (partnerships)

Module-III: Renewal - Similar to Take-off and Resource Maturity of SMEs

Module-IV: Harvesting Rewards- Exit strategies for entrepreneurs, bankruptcy, and succession and harvesting strategy

Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; **HA** - Home Assignment; **V** - Viva; **CT**- Class Test; **A** - Attendance; **EE** - End Semester Examination)

Learning Outcomes

At the end of the course, the students will be able to:

- Effectively tackle growth challenges of their venture.
- Nurture and apply a growth mind-set.
- Continue refining their business model.
- Draw an expansion plan for their venture.
- Scale up their business.
- HR policies, How to attract and retain key management team.
- Focus on revenue maximization.
- Build key aspects of adaptation and sustainability.
- Manage and grow their business in terms of expansion and look for partnerships.

Learning Methods

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects; and Practical Experiences including challenges, internships and apprenticeships.

PRACTICUM PROGRAMMES

- Practicum programmes enable real-world experiences that empower students to explore and strengthen their entrepreneurial abilities. Students join E-cells in the first year, build their skills through a series of activities, and practice by starting campus companies as they move forward.
- The Practicum Approach motivates and nurtures entrepreneurial development through hands-on work at the E-Cells. By managing operations of E-cells, interacting with entrepreneurs, organizing workshops, enabling start-up internships, and running campus companies, students apply learnings to real world situations and challenges. Additionally, all E-Cells participate in entrepreneurship events through the year.
- The Practicum Programme is designed to cater the learning needs of new (basic) students and advanced students in the entrepreneurship learning curve.
- A bouquet of 16 activities, 8 per category will be offered both for the Basic and Advanced students. In addition to two hands-on Programs.
- Additionally, a select number of students from each institute will be trained as leaders. These E-leaders manage the E-cells and run the Practicum activities along with the designated faculty.
- The structure of the Programme is provided in the below table.

ECONOMICS

Syllabus - Semester First

MICRO ECONOMICS-I

Course Code: ECO2151 **Credit Units: 03**

Course Objective:
This course is designed to expose first –year students, who may be new to economics, the basic principles of microeconomic theory. The emphasis would be on thinking like an economists & the course will illustrate how microeconomic concepts can be applied to analyze real life situations.

Course Contents:
Module I: Exploring the Subject Matter of Economics
Why study economics? The scope and method of economics; scarcity and choice; questions of what, how and for whom to produce and how to distribute output

Module II: Supply and Demand: How Markets Work, Markets and Welfare
Individual demand and supply schedules and the derivation of market demand and supply; shifts in demand and supply curves; the role prices in resource allocation; Elasticity of Demand — price, income and cross; Consumer's surplus

Module III: Consumer's Behavior
Utility-cardinal and ordinal approaches, Indifference curves; budget constraints;. Consumer's equilibrium (Hicks and Slutsky); Giffin goods; Compensated demand; Revealed preference theory; Engel curve.

Module IV: Theory of Production and Costs:
Technology, Isoquants, production with one and more variable inputs, Returns to scale, short run and long run costs, cost curves in the short run and long run, total, average, and marginal product, cost minimization and expansion path, elasticity of substitution.

Examination Scheme:

Syllabus - Semester Second

INDIAN ECONOMY

Course Code: ECO2251 **Credit Units: 03**

Course Objective:
This subject covers the major features of Indian Economy at Independence in the field of agriculture industry and other infrastructure of the economy. It also deals with growth of development of different phases on the current issues in Indian economy policy.

Course Contents:

Module I: Economic Development at the time of Independence
Major features of the economy at independence: Colonial economy; Semi-feudal economy; Backward economy; Stagnant economy

Module II: Planning in India
Objectives; Strategy; Broad achievements and failures; Current Five Year Plan — objectives, allocation and targets; New economic reforms — Liberalization, privatization and globalization; Rationale behind economic reforms; Progress of privatization and globalization

Module III: Major Economic Issues
Demographic trends and issues; education; poverty and inequality; unemployment, inflation

Module IV: External Sector
Role of foreign trade; Trends in exports and imports; Composition and direction of India's foreign trade; Balance of payments crisis; Export promotion measures and the new trade policies

Module V: Agriculture
Nature and importance; Trends in agricultural production and productivity; Factors determining productivity; Land Reforms; New agricultural strategy and green revolution

Module VI: Industry
Industrial development during the planning period; Industrial policy of 1991 and the latest Industrial policy; Growth and problems of small scale industries; Role of public sector enterprises in India's industrialization

Examination Scheme:

Components	A	P	HA	CT	EE

Syllabus - Semester Third

MACRO ECONOMICS-I

Course Code: ECO2351 **Credit Units: 03**

Course Objective:
This course aims at introducing the fundamentals of Macroeconomic theories, policies and models in a historical perspective. It will enable the students to develop a critical insight on Classical and Keynesian macroeconomic models, to understand the relationship between inflation and employment by providing exposure to the constructions of Friedman, Phelps & Phillips.

Course Contents:

Module I: Introduction to Macroeconomics
The roots of macroeconomics, macroeconomic concerns, the role of government in the macro economy, the components of the macro economy, the methodology of macroeconomics

Module II: Introduction to National Income Accounting
Concepts of GDP and national income, approaches to calculating GDP, GDP and personal income, Nominal and real GDP, Limitations of the GDP concept.

Module III: Schools of Macroeconomic Thoughts
Classical, Neo Classical and Keynesian Models.; Say's Law of Markets and Classical Theory of Employment

Module IV: Keynesian Model
Keynes theory of income and employment; Consumption function; theory of investment-marginal efficiency of capital; saving and investment; The Investment Multiplier and its application to LDC's

Module V: Money in the Modern Economy
Theories of Demand for Money: Quantity Theory and Keynes approach; Characteristics of a monetary economy; the supply of money and overall liquidity position; credit creation

Module VI: Inflation
Inflation: types, causes, consequences and impact on the Indian economy; remedial measures.

Examination Scheme:

Syllabus - Semester Fourth

PUBLIC FINANCE

Course Code: ECO2451 **Credit Units: 03**

Course Objective:
This subject is primarily aimed at introducing principles of public finance, role of different governments, public expenditure, taxation, budget and fiscal policy in India. The government plays different roles and performs varied functions which are different from earlier societies. In this context the public financial functions of the government need to be understood by a student, by studying the relevant theory and empirical analysis.

Course Contents:

Module I: Introduction
Nature, Scope and Importance, Theory of Maximum Social Advantage, Private goods, Public goods and Merit goods; Role of government in managing the economy under different economic systems – Social Welfare Function; Theory of Public goods - Market failure - Externalities - problems in allocation of resources - theoretical developments in Demand revelation for social goods -Public choice.

Module II: Public Expenditure
Theories of Public Expenditure -Structure and growth of public expenditure - Criteria for public investment - Income Redistribution – Expenditure Programmes for the poor - Social Insurance: Unemployment Insurance, Health Care, and Education - Social cost-benefit analysis - benefit estimation and evaluation.

Module III: Taxation
Theory of Taxation - Benefit and ability-to-pay approaches - Indian Direct and Indirect Taxes - Effects of taxation - Requirements of a sound tax system - Canons of taxation - Tax reforms since 1975 - Chelliah Committee Report - Evaluation of Tax Reforms -Taxation Incidence and alternative concepts of Incidence.

Module IV Budgeting and Debt
Budget - Concept of PPB - Zero-based Budgeting - Cash budgeting : Cash management and Treasury functions in Government - Deficit Budgeting - Types of Deficits - Public Debt: Trends and composition of Indian Public Debt: Instruments - Treasury bills, bonds and other securities, Role of RBI - Debt management - Methods of debt redemption.

Module V: Fiscal Policy
Role of Fiscal Policy in India - Principles of Fiscal federalism in India; Finance Commissions and Planning Commission

STATISTICAL METHODS IN ECONOMICS

Course Code: ECO2552 **Credit Units: 03**

Course Objective:
This subject will deal with all fundamental statistical methods of tools which the students have to use in economic analysis and decision making problems.

Course Contents:

Module I: Introduction:
Basic concepts: Population, Sample, Parameter, Statistic, Frequency distribution, Cumulative frequency distribution; Graphic and diagrammatic representation of data; Techniques of data collection. Sampling vs. Population, primary and secondary data.

Module II: Central Tendency and Dispersion:
Measures of Central Tendency: Mean, Median, Mode, Geometric mean, Harmonic mean; Measures of Dispersion; Range, Quartile deviation Mean deviation, Standard deviation; Skewness and Kurtosis, Moments.

Module III: Correlation and Regression:
Correlation: Simple; Coefficient of correlation; Karl Pearson and Rank correlation; Partial and Multiple Correlation analysis; Regression analysis – Estimation of a regression line in a bivariate distribution, Least squares method; Interpretation of correlation and regression coefficients; Coefficient of determination.

Module IV: Time Series:
Time Series Analysis - concept and components, determination of trend (Linear, Quadratic and Exponential) and seasonal indices

Module V: Index Numbers
Concept of an index number; Laspeyer's, Paasche's and Fisher's Index Numbers; Time Reversal, Factor reversal and circular tests; Chain base index; Problems in the Construction of an index number; splicing; base shifting and use of index number for deflating other series.

Examination Scheme:

MONEY, BANKING AND FINANCIAL MARKETS

Course Code: ECO2651 **Credit Units: 03**

Course Objective:

The main objective of the course is to impart knowledge about the concept of money, financial markets, financial instruments &banking industry; The concepts like estimation of demand for & Supply of money, financial deepening etc. will also be introduced.

Course Contents:

Module I: Money in the Financial System
Role of money in the economy - various schools of economic thought. Functions of money, financial markets, financial instruments and financial deepening;

Module II :Financial Markets
Structure of Money and Capital market in India. Monetary and Financial sector reforms in India. Concept of risk and return ; management of risk and return, Optimal Portfolio, Financial Innovations.

Module III: Interest Rates
Theories of Interest, Determination and Interstates differentials, Structure of interest rates in India. Theories of term structure of interest rates.

Module IV: Banking System
Introduction to the Banking system, Role and functions of commercial banks, Balance sheet and Portfolio Management, Indian Banking system –Changing role and structure, Banking Regulations, Banking sector reforms in India.

Module V: Central Banking and Monetary Policy
Functions of Central Banking, Various measures of money supply, Reserve Money .Goals, Targets, Instruments of Monetary Control, Monetary Policy Transmission mechanism, Monetary- management in an open economy, current monetary policy of India.

SINGLE SEMESTER COURSE

Introduction

In accordance with the National Youth Policy which envisages that youth of the country should spend at least one fifth of their total time spent in an educational institution on outdoor activities. In furtherance of our National Youth Policy compulsory military training is being conducted for UG students at Amity University Gurgaon. A tented camp has been established at the sprawling campus at Amity University Gurgaon, surrounded by forest land and orchards within the campus, the camp gives a feeling of living in field conditions, in the wild.

Proposal

It is proposed to introduce military training (MTC) for under graduate students as an open elective, as part and parcel of the flexi credit system, wherein a student can design his own degree from a basket of courses.

Aim& Objectives

The aim of Military Training for UG students is :-

- To inculcate an essence of camaraderie and brotherhood amongst the students.
- To bring energy and team spirit amongst participants.
- To expose the students to the essentials of physical well-being and fitness.
- To give exposure to students regarding adventure training.
- To inculcate leadership qualities in students.
- To expose students to subjects of general awareness such as role of armed forces in nation building, map reading and fire fighting.

Methodology

MTC is organized as a combined camp for both boys and girls,however, separate infrastructure for boys and girls have been created at AUG.

Assessment

Assessment of a student is based on the following :-

(a) Participating in all activities and successfully completing the course.
(b) Performance in the assimilation exercise held at the end of the course.
(c) Participation in debate and class participation.
(d) Exhibiting leadership qualities i.e. leading drill contingents.

Maximum of three credit will be given to participants.

Three modules have been designed to fulfill the aim and objectives of this Military Training Foundation Course as under :-

(a) Module I - Military Training.
(b) Module II - Leadership and Motivation.
(c) Module III - Adventure training.

MODULES: MILITARY TRAINING CAMAPS (MTC)

Module-I: Military Training

Part-A

1.1 Introduction of Basic principles of Camping.
1.2 Drill aspect of discipline.
1.3 Camp Layout.
1.4 Hygiene and sanitation of camp.
1.5 Introduction to Armed Forces.
1.6 Role of Armed force in Nation building.

Part-B

I. Conducting drill.
II. Camp setting.
III. General fitness exercises.
IV. Obstacle crossing.
V. Weapon firing.

Module-II: Leadership and Motivation

Part-A

2.1 National character and values
2.2 Role and importance of Leadership
2.3 Law of Armed Conflict
2.4 Team play and group cohesion

Part-B

I. Tug of war
II. Task assignment and conduct
III. Group Discussion
IV. Games
V. Fire safety drills
VI. March past

Module-III: Adventure Training

Part-B

I. Trekking
II. Rappelling
III. Rope Climbing

MICROECONOMICS THEORY AND APPLICATIONS

Course Code: DCOM2101 **Credit Units: 04**

Course Objective

The objective of this paper is to make the student to understand how the business organizations work by applying economic principles in their business management. The course will attempt to relate theory to practice and try to instill in students the ability to apply basic microeconomic concepts to the understanding of everyday phenomena.

Course Contents

Module I: Introduction

Problem of scarcity and choice: scarcity, choice and opportunity cost; production possibility frontier; economic systems. Demand and supply: law of demand, determinants of demand, shifts of demand versus movements along a demand curve, market demand, law of supply, determinants of supply, shifts of supply versus movements along a supply curve, market supply, market equilibrium. Applications of Demand and Supply: Price rationing, Price floors, Consumer surplus, Producer surplus. Demand Forecasting. Elasticity: Elasticity of demand, calculating Elasticity, Price, Income and Cross elasticity.

Module II: Consumer Behaviour

Consumer sovereignty-limitations. Approaches to the study of consumer behaviour. Cardinal approach: Law of equi-marginal utility, Ordinal approach: Indifference curve analysis, Properties. Consumer surplus: Meaning, Significance and Limitations. Price, income and substitution effects. Giffen goods. Engel curve.

Module III: Production and Costs

Production: Behaviour of profit-maximizing firms, production process, production functions, law of variable proportions, choice of technology, isoquant and iso-cost lines, cost-minimizing equilibrium condition.

Module IV: Market Structures

Market structures & Business decisions; Objectives of Business firm. Perfect competition: Profit Maximization, and equilibrium of firm & industry; Short-run and long-run supply curves; price and output determination, practical applications. Monopoly: Determination of price under monopoly; Equilibrium of a firm; Comparison between perfect competition and monopoly; Multi plant monopoly, Price discrimination; Practical applications. Monopolistic Competition: Meaning & Characteristics; Price and Output determination under monopolistic Competition; Excess capacity under monopolistic competition. Oligopoly: Characteristics, indeterminate pricing and output; classical models of oligopoly; price leadership; Collusive oligopoly, kinked demand curve.

Module V: Income Distribution & Factor Pricing

Demand for factors, Supply of factors, backward bending supply curve for labour, Concepts of economic rent; Functional distribution of income.

Examination Scheme:

INCOME TAX LAW AND PRACTICE

Course Code: DCOM2401 **Credit Units: 04**

Course Objective:
To prepare the students with the concepts and theory of income tax accounting and to give a practical exposure to them

Course Contents:

Module-I: Introduction
Brief History of Income Tax, Legal Frame work, Cannons of Taxation – Finance Bill – Scheme of Income Tax. Definition: Assessee, Person, assessment year, previous year, income, Gross Total Income, Total Income, Agricultural Income (including integration of Agricultural Income with Non- Agriculture Income), Revenue and Capital (a) Receipts (b) Expenditure (c) Loss. Residential Status and Incidence of Tax.

Module II : Income from Salary
Income from Salary – Features of Salary Income – Basic Salary – Allowance, Perquisites section 89(1) – Tax Rebate U/S 88 – Problems.

Module III : Income from House Property
Income from House Property – Introduction – Annual value under different situations – deductions– problems.

Module IV : Profits from Business & Profession
Profits & Gains of Business & Profession – Introduction, Basic Principles, Basic Principles, Computation of Taxable profits of Business & Profession, deductions, problems.

Module V : Income from Capital Gains
Income from Capital Gains:- Introduction, Meaning & types of capital assets, Computation of Capital Gains, Problems.

Module VI : Income from Other Sources
Income from Other Sources:- Meaning, examples of income, Computation of income, Problems.

Module VII: Computation of Individual Tax Liability
Deductions from GTI: Rebates and reliefs, Clubbing provisions; set off and carry forward of losses. Assessment of an Individual

Examination Scheme:

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

SEMESTER-V
COST ACCOUNTING

Course Code: DCOM2551 **Credit Units: 04**

Course Objective:
To get an expert knowledge in the area of cost management and cost control to enable effective management decisions.

Course Contents:
Module I: Cost Accounting
Introduction – Meaning of Cost, costing and Cost Accounting – Comparison between Financial Accounts and Cost Accounts –Cost concepts and Classification of Costs – Cost Module – Cost Center, cost object – Preparation of cost sheet

Module II: **Material and Labour Costing**
Methods of pricing of material issues- LIFO, FIFO- Weighed Average Method, Simple Average Method; Inventory Control- Concept & techniques like fixing of stock levels, EOQ, ABC analysis.

Control of labour cost – Labour Turn Turnover – Causes and effects of labour turnover – Meaning of Time and Motion Study, Merit Rating, Job Analysis, Time keeping and Time booking – Idle time, Overtime – Methods of Wage Payment, Time rate and Piece Rate – Incentive Schemes – Halsey Premium Plan – Rowan Bonus Plan – Taylor's and Merrick's differential piece rate systems – Problems.

Module IV: Overhead Costing
Definition, Classification, allocation, apportionment & absorption of overhead, treatment of over & under absorption, Capacity Levels and Costs, Treatments of certain items in costing like interest and financing charges, packing expenses, bad debts, research, and development costs.

Module V: Costing Methods
Job costing, Contract costing, Process costing, Activity based costing, Service costing.

Module VI: Cost Management System and Decision making:
Total Quality Management, Just in Time (JIT), Benchmark, Back-flush costing, Reengineering, Cost reduction and value Analysis: Concept and Techniques, Decision Making, Make or buy, Add or Drop, Operate/Shutdown, Sell/Process

Examination Scheme:

SEMESTER-VI
MANAGEMENT ACCOUNTING

Course Code: DCOM2651 **Credit Units: 04**

Course Objective: To provide the students' knowledge about the use of costing data for planning, control and decision making.

Course Contents:

Module I: Management Accounting

Introduction to different types of Accounting: Financial Accounting, Cost Accounting and Management Accounting, Management Accounting –evolution, meaning, objectives, nature, scope, functions, techniques, and limitations. Financial Accounting vs. Cost Accounting vs. Management Accounting.

Module II: Budgetary Control and Ratio Analysis

Budgets- meaning, objectives, classification, and preparation of budgets: Fixed and Flexible budget, Cash Budget, Importance of budgets. Ratio Analysis - meaning, objectives, significance, limitations, classification and computation of ratios: Liquidity Ratio, Activity ratio, Profitability ratio and Capital structure ratios.

Module III: Cost Volume Profit Analysis

Cost Volume Profit Analysis – meaning, objectives, advantages, methods of cost volume profit analysis. Concept of Angle of Incidence.

Module IV: Cash Flow Analysis & Fund Flow Analysis

Funds Flow Statement: meaning, objectives, limitations, concept of funds from business operations, introduction to schedule of changes in working capital and preparation of Funds Flow Statement. Cash Flow Statement: meaning, objectives, limitations, preparation of cash flow statement (indirect method), difference between cash flow statement and fund flow statement.

Module V: Standard Costing

Standard costing: meaning, concept, objectives, advantages, and limitations. Variance analysis: concept, types of variances: material and labour variances and their accounting treatment.

Examination Scheme:

Components	A	P	HA	CT	EE

MACRO ECONOMICS

Course Code: DCOM2602 **Credit Units: 04**

Course Objective:
This course aims at introducing the fundamentals of Macroeconomic theories, policies and models in a historical perspective. It will enable the students to develop a critical insight on Classical and Keynesian macroeconomic models, to understand the relationship between inflation and employment by providing exposure to the constructions of Friedman, Phelps & Phillips.

Course Contents:

Module I: Introduction to Macroeconomics
The roots of macroeconomics, macroeconomic concerns, the role of government in the macro economy, the components of the macro economy, the methodology of macroeconomics Static macroeconomics analysis short run and the long run.

Module II: Introduction to National Income Accounting
Concepts of GDP and national income, approaches to calculating GDP, GDP and personal income, Nominal and real GDP, Limitations of the GDP concept, GDP and the black economy.

Module III: Schools of Macroeconomic Thoughts
Classical, Neo Classical and Keynesian Models.; Say's Law of Markets and Classical Theory of Employment

Module IV: Keynesian Model
Aggregate expenditure and equilibrium output; Behavioural foundation:- Consumption function; investment ; determinants of business Fixed investment ; theory of investment-marginal efficiency of capital; saving and investment; The Investment Multiplier and its application to LDC's

Module V: Money in the Modern Economy
Theories of Demand for Money: Quantity Theory and Keynes approach. Baumol and Tobin Contributions and Friedman's restatement of quantity theory Characteristics of a monetary economy; the supply of money and overall liquidity position; credit creation

Module VI: Inflation
The causes of inflation, measures to control inflation; level of prices and the value of money, The Fisher effect, the cost of inflation.

Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; **P** -Project/Seminar/Quiz/Viva; **HA**-Home Assignment; **CT**-Class Test; **EE**-End Semester Examination

INTERNATIONAL BUSINESS

Course Code: DCOM2603 **Credit Units: 04**

Course Objective:
The purpose of this course is to acquaint the students with nature, scope, structure and operations of international business and familiarize them with trends and developments in India's foreign trade and investments and policy framework.

Course Contents:
Module-I: Introduction
International Business: Its Importance, Nature and Scope; Driving Forces of Globalisation, Modes of Entry into International Business; Entry Barriers, Management of International Business Operations – Complexities and Issues; IT and International Business, India's involvement in International Business.
Cross Cultural Management: Hofstede Study, Edward T Hall Study.

Module-II: Fundamentals of International Trade
Theoretical Foundations of International Trade: Reasons for International Trade; Theories of International Trade; Gains from Trade; Foreign Trade Multiplier; Terms of rade.

Module-III: Instruments of Commercial Policy
Instruments of Commercial Policy: Tariffs, quotas and other measures and their effects; World trade and protectionism. Balance of Payment Account: Current and Capital Account components and accounting system; Balance of payment deficits and adjustment policies.

Module-IV: International Business Environment
International Business Environment: Framework for analyzing international business environment; Domestic and foreign environments and their impact on international business decisions; World trading environment – Pattern and structure of world trade in goods and services; Counter trade. International Financial Environment: Exchange rate mechanism and arrangement; International money and capital markets; Foreign investment flows – Pattern, structure and effects. Movements in foreign exchange and interest rates and their impact on trade and investment flows.

Module-V: International Economic Institutions and Agreements
International Economic Institutions and Agreements: WTO, IMF, World bank, UNCTAD, Agreement on Textiles and Clothing, GSP, GSTP and other international agreements and treaties; International commodity trading and agreements- India's involvement and consequences ,Anti Dumping Duties:Concept.

Module-VI: Regional Economic Integration
Types of Regional Economic Integration - Free Trade Area, Custom Union, Common Market, Economic Union, Monitory Union and Political Union etc., Theory of customs union; Trade creation and diversion effects; Regionalism vs. multilateralism; Theory - Mercantilism, absolute advantage and comparative advantage, Trends in Global Trade ,Trends in India's Trade, Trading Blocks: ASEAN, SAFTA,SAARC,NAFTA,EU.

Module-VII: Multinational Companies
Multinationals (MNCs) in International Business: Issue in investment, technology transfer, pricing and regulations; International collaborations and strategic alliances. Contemporary Developments and Issues in International Business.

Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; **P** -Project/Seminar/Quiz/Viva; **HA**-Home Assignment; **CT**-Class Test;

SEMESTER-VII

BUSINESS MATHEMATICS

Course Code: DCOM2701 **Credit Units: 04**

Course Objective: To familiarize the students with basic mathematical tools and the application of the same to business and economic situations.

Course Contents:

Module I

Formulation and basics of linear programming problem (LPP), graphical method to solve the linear programming problem, solution by Simplex Method- Minimization and maximization cases, feasible solution, optimal solution and degeneracy.

Module II

Arithmetic Progressions and Geometric progressions basic concepts and practical examples based on business related fields.

Module III

Matrices and determinants Definition of a matrix; Types of matrices; Algebra of matrices; properties of determinants; calculation of values of Determinants upto third order; Adjoint of a matrix, Finding inverse of a matrix; Rank of a matrix, Solution of system of linear equations by Cramer's Rule and Matrix Inverse Method (including not more than three variables).

Module IV

Differentiation Definition; Derivative using first Principle; Method of Differentiation of sum, difference, product and Quotient of two functions; Derivative if compositive, inverse, exponential, Logarithmic, second order derivative, Application of Differentiation.

Module V

Maxima and minima Case of one variable involving Second Order derivative; Average Cost, Average revenue functions, marginal cost, marginal revenue, Elasticity of demand, Application of Maxima or Minima.

Module VI:

Integration as anti-derivative process; Standard forms; Method of Integration by substitution, by parts and by use of partial fractions. Definite integral and their properties; Determination of Cost, revenue and demand function; Consumer's surplus and Producer's surplus.

Examination Scheme:

STRATEGIC MANAGEMENT

Course Code: DCOM2702 **Credit Units: 04**

Module 1 Introduction to Strategic Management:
Meaning, Evolution, Conceptual Framework of Strategic Management, Strategic Management Process, Schools of Strategy Formulation, Participants in Strategic Management: Role of Board of Directors, Role of Chief Executive, Role of Corporate Planning Staff, Role of Other Management, Role of Consultants.

Module 2 Strategic Intent and Strategy Formulation:
Strategic Intent: Meaning, Vision, Mission, Business Definition, Goals and Objectives, Relevance of Strategic Intent, Environmental Analysis: Concept, Environmental Factors, Industry Analysis, Competition Analysis, Organizational Analysis: Concept, Strategic Factors and Analysis, Strategic Audit, SWOT Analysis, Corporate Strategies, Business Strategies, Choice of Strategy.

Module 3 Strategy Implementation and Control:
Issues in Strategy Implementation, Structural Implementation: Forms of Organization Structure, Strategy Structure Relationship, Relating Structure to Strategy, Behavioral Implementation: Leadership, Organizational Culture, Values, Ideologies and Ethics, Social Responsibility and Corporate Governance, Functional Implementation, Strategic Control.

Module 4 Strategic Issues in Specified Areas:
Performance Management - Concept, components; Performance, Productivity and Efficiency, Financial Performance Analysis, Supply Chain Management (SCM), Customer Relationship Management (CRM) & Customer Profitability analysis.

Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

MERGER AND ACQUISITIONS

Course Code: DCOM2703 **Credit Units: 04**

Course Description
In this course the concepts of Corporate Restructuring, categories of corporate restricting, types of merger and acquisition, various methods of merger and acquisition are discussed. The concept of various techniques used for merger and acquisition, procedure of disinvestment in public and private sector used by the organizations. The aim of this course is to make the students familiar with the fundamentals of merger and acquisition.

Course Objective:
The main objective of this course is to familiarize the students with the basic aspects of mergers and acquisitions.

Module 1: Mergers and Acquisitions – Overview:
Introduction – Forms of Corporate Restructuring – Expansion – Mergers and Acquisitions – Tender Offers – Joint Ventures – Sell Offs – Spin Offs – Split Offs – Split Ups – Divestitures – Equity Carve outs - Corporate Control – Premium Buy Backs – Standstill Agreements – Anti- Takeover Amendments – Proxy Contests - Changes in Ownership Structures - Share Repurchases – Exchange Offers – Leveraged Buy – out – Going Private – Issue Raised by Restructuring – History of Merger Movements.

Module 2: Mergers and Acquisitions:
Economic Rationale for Major Types of Mergers - Horizontal Mergers – Vertical Mergers – Conglomerate Mergers - Concentric Mergers.

Module 3: Theories of Mergers:
Efficiency Theories – Differential Efficiency - Inefficient Management – Operating Synergy – Pure Diversification - Financial Synergy – Strategic Realignment to Changing Environments – Undervaluation – Information and Signalling – Agency Problems and Managerialism - Takeovers as a Solution to Agency Problems.

Module 4: Methods of Valuation:
CashFlow Basis, Earning Potential basis, Growth Rate, Market Price etc., Computation of Impact on EPS and market Price ,Determination of Exchange Ratio, MBO,LBO, Bootstrapping, Criteria for Negotiating Friendly takeovers, Financing of mergers.

Module 5: Legal Aspects of Mergers/Amalgamations and Acquisitions:
Provision of Companies Act, Regulation by SEBI, Takeover Code: Scheme of Amalgamation, Approval from Court.
Recent Case studies on Mergers and Acquisitions.

Examination Scheme:

ADVANCE ACCOUNTING

Course Code: DCOM2704 **Credit Units: 04**

Course Objectives: The objective of the course is to acquaint students about emerging accounting trends.

Course Contents:
Module I – Valuation of Assets: Inventories, Goodwill, Shares.

Module II- Accounting for Investments, Accounting for Financial instruments.

Module III- Agricultural Farm Accounting, Hotel Accounting, Inflation Accounting, Human Resource Accounting.

Module IV- Accounts of Government Companies and Statutory Corporations, Corporate Social Accounting, Environmental Accounting, Lean Accounting, Forensic Accounting, International Accounting.

Module V- Value Added Statement, Economic Value Added (EVA), Social Accounting.

Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

Attendance; **P-** Project/Seminar/Quiz/Viva; **HA**-Home Assignment; **CT**-Class Test; **EE**-End Semester Examination

BUSINESS TAXATION

Course Code: DCOM2705 **Credit Units: 04**

Course Objectives

The objective of this course is to Enable the students to acquire working knowledge of principles and provisions of GST and Customs Law. Enable the students to acquire working knowledge of principles and provisions of Customs Law.

Course Content :

MODULE 1:

Taxation powers of the Union and State Governments, Introduction Constitutional framework of Indirect Taxes before GST (Taxation Powers of Union& State Government); Concept of VAT: Meaning, Variants and Methods; Major Defects in the structure of Indirect Taxes prior to GST; Rationale for GST; Structure of GST (SGST,CGST, UTGST & IGST); GST Council, Decision-making process and its impact on GST policies. GST Network, State Compensation Mechanism, Registration., Legal foundation for GST and its significance in India's tax reform.

MODULE 2:

Procedures and compliance requirements for the movement of goods., Levy and collection of GST Taxable event- "Supply" of Goods and Services; Place of Supply: Within state, Interstate, Import and Export; Time of supply; Valuation for GST Valuation rules, taxability of reimbursement of expenses; Exemption from GST: Small supplies, Refund Mechanisms under GST and Composition Scheme; Classification of Goods and Services: Composite and Mixed Supplies.

MODULE 3:

Input Tax Credit-ITC Reconciliation and Matching , ITC on Supplies Received under Reverse Charge Mechanism (RCM) Eligible and Ineligible Input Tax Credit; Apportionments of Credit and Blocked Credits; Tax Credit in respect of Capital Goods; Recovery of Excess Tax Credit; Availability of Tax Credit in special circumstances; Input Service Distribution; Payment of Taxes; Doctrine of unjust enrichment; TDS, TCS. Provisions, Reverse Charge Mechanism

MODULE 4:

Filing of Annual Returns and GST Reconciliation, Procedures Tax Invoice, Credit and Debit Notes, Returns, Audit in GST, Assessment: Self-Assessment, Summary and Scrutiny. Provisional Assessment under GST.

MODULE 5:

GST on Export and Import of Services ,Special Provisions Taxability of E-Commerce, Anti-Profiteering, Avoidance of dual control, E-way bills, zero-rated supply, Offences and Penalties, Appeals and Revisions , Advance Ruling Mechanism under GST.

MODULE 6:

Customs Duty Drawback Scheme, Prohibited and Restricted Goods, Customs Law Basic Concepts, Territorial Waters, High Seas, Classification of Custom Duties, Valuation, Baggage Rules & Exemptions. Penalties and Confiscation under Customs Act

Examination Scheme:

Components	A	P	HA	CT	EE

CORPORATE TAX LAW & PRACTICE

Course Code: DCOM2706 **Credit Units: 04**

Course Objectives: To prepare the students with the concepts and theory of corporate tax law and practices and to give a practical exposure to them.

Course Contents:

Module I

Computation of total income in case of companies including non-residents, Co-operative Society

Module II

Procedure for assessment: Section 139 to 148 (Return of Income)PAN, Assessments, Methods of Accounting, Accounting standards, Time limit for completion of Assessment, Rectification of mistake etc. Special procedure for assessment of search cases.

Module III

Liability in Special Cases: Legal representatives, Representative assesses: provisions applicable to firms, AOP & BOI, executors succession, shipping companies. Recovery of tax in respect of non- resident, persons leaving India, person trying to alienate their property, discontinuation of business & profession

Module IV

Collection and Recovery of tax, TDS, Advance payment of income tax, Interest u/s 234, Refunds and settlement of cases

Module V

Appeals & Revision, Acquisition of Immovable properties, provisions to counter evasion of tax, Penalties, Offences and Prosecutions, Authorized representation and miscellaneous provisions.

Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

BASICS OF RESEARCH METHODOLOGY, ETHICS AND RESEARCH COMMUNICATION

Course Code: DCOM2739 **Credit Units: 04**

Course Objectives:

Module1: Basics of Research Methodology
Business Research: Meaning, Need, Types, Approaches, Research methods vs Research Methodology, Research Process, Role of research in important areas, Identification and Formulation of Research Problem, Variables and Variable type, Hypothesis, Types and Formulation of Hypothesis.

Module 2: Research Design
Research Design: Meaning, Need, Types of Research Design: Exploratory, Descriptive. Experimental and Diagnostic and Survey Research, Features of a good research design.

Module 3: Sampling Design
Sampling design: Meaning, Need, and Advantages of sampling over census, Probability and Non - probability Sampling Methods, Criteria of Selecting a sampling procedure, Factors influencing sample size.

Module 4: Data Collection
Data Collection Methods: Primary and Secondary Data collection methods, Questionnaire/Schedule; Questionnaire designing, Interview and Observational methods, Measurement Scales, Techniques of Developing Scales, Reliability and Validity of scales

Module 5: Data Analysis and Ethics
Data Analysis: Descriptive and Univariate Statistics; Bivariate Analysis: Test of Difference, Measures of Association; Introduction to Multivariate Analysis, Report Writing: Need, Types and Characteristics of a research report, Publication ethics: definition, introduction and importance, Predatory publishers and journals, Plagiarism: Use of plagiarism software like Turnitin, Urkund and other open- source software tools.

Examination Scheme:

Components	A	P	HA	CT	EE

SEMESTER-VIII

STATISTICAL METHODS IN RESEARCH

Course Code: DCOM2801 **Credit Units: 04**

Course Objectives:
To provide basic understanding of quantitative tools and their elementary application to business problems. The formulation of hypothesis and application of statistical methods.

Course Contents:
Module I- Descriptive Statistics
Processing Data - Editing, Coding and Tabulating Presentation of Data; Diagrammatic and Graphic Representation of Data. Analysis of Data; Mean, Median, Mode Weighted Average and its Merits and Demerits – Dispersion; Range, Standard Deviation, Co-efficient of Variation, Lorenz Curve

Module II-Analytical Statistics
Correlation; Simple, Partial and Multiple – Pearson's Coefficient of Correlation and Rank Correlation – Regression; Simple, Linear and Non-linear Regression

Module III- Statistical Methods
Random Variable- Continuous & discrete; Discrete distribution- Binomial & Poisson, Bernoulli's trials; Continuous Distribution- Normal distribution, Properties of normal curve, importance & application

Module IV- Tests of Hypothesis
Significance test: concepts and applications, acceptance and critical regions, null and alternative hypothesis, judgemental errors, level of significance. Power of a test, z test for testing of mean, proportion and equality of means, t- test, Chi square Test.

Module V- Decision Theory
Decision making, under certainity, uncertainity & risk, Bayersian Analysis, Decision tree.

Examination Scheme: **Components**	**A**	**P**	**HA**	**CT**	**EE**
Weightage (%)	5	5	5	15	70

ENTREPRENEURSHIP DEVELOPMENT

Course Code: DCOM2802 **Credit Units: 04**

Module 1: Introduction to Entrepreneurship; Entrepreneurship Meaning- Characteristics- Functions- Traits- Types of Entrepreneurs- Women Entrepreneurship- Rural Entrepreneurship- Role of Entrepreneurship in Economic Development – Factors affecting entrepreneurial growth.

Module 2: **Institutional Support to Entrepreneurs Entrepreneurship** Development Programme- Need- Objectives- Course Contents Phases-Evaluation - DIC, NSIC, SIDO, KVIC, SIDC, Industrial Estates, NIESBUD, SIDBI, EDII- - Angel Investors- Incubators- STEP- Venture Capital

Module 3: MOTIVATION: Major Motives Influencing an entrepreneur–Achievement, Motivation Training, self-Rating, Business Game, Thematic Apperception Test– Stress management, Entrepreneurship Development Programs– Need, Objectives

Module 4: BUSINESS: Small Enterprises – Definition, Classification– Characteristics, Ownership Structures–Project Formulation– Steps involved in setting up a Business–identifying, selecting a Good Business opportunity, Market Survey and Research, Techno Economic Feasibility Assessment– Preparation of Preliminary Project Reports– Project Appraisal–Sources of Information– Classification of Needs and Agencies

Module 5: Business Plan and Legal Aspects: Development of Business Plan and starting venture- Registration Formalities- IPR Incentives and Subsidies- Need for Incentives and Subsidies- Tax benefits for SSI Units- Sickness in Small Industries- Causes and Remedies and Revival.

ADVANCED COST ACCOUNTING

Course Code: DCOM2803 **Credit Units: 04**

Course Contents:

Module I: Cost Book-Keeping
Non-integrated Accounting system, Accounting Ledgers And Control Accounts, Integrated Accounting, Reconciliation of Cost & Financial Accounts.

Module II: Process Costing
Basic Concept, Joint products and By-products, work-in-progress, (Equivalent production), inter- Process profits, Uniform Costing and inter firm comparisons.

Module III: Activity Based Costing
Problems of Traditional Costing, Cost analysis under ABC, Institution of ABC, Benefits and Weaknesses, Life Cycle Costing; Target Costing.

Module IV: Cost Management System
Total Quality Management, Benchmark, Back-flush Costing, Reengineering, Cost Reduction and value Analysis: Concept and Techniques.

Module V:
Service Costing, Marginal Costing, Standard Costing, Decision Making, Make or buy, Add or Drop, Operate/Shutdown, Sell/Process.

Examination Scheme:

RECENT TRENDS IN ACCOUNTING

Course Code: DCOM2804 **Credit Units: 04**

Course Contents:

Module I: Forensic Accounting

Meaning, Functioning, Types of Forensic Accounting, Forensic Accountant Duties, Audit procedures in Forensic Accounting, Advantages and Disadvantages of working in Forensic Accounting, Emerging Trends in Forensic Accounting: Data Analytics, Cyber Forensic Accounting, Cryptocurrencies, and Blockchain Technology for Fraud Investigation and Prevention.

Module II: Behavioral Accounting

Introduction to Behavioral Accounting and Auditing, Types of Behavioral Accounting, Behavioral Biases in Financial Decision-Making, The Influence of Cognitive Factors on Accounting Practices, Emotional Aspects in Auditing and Reporting, Heuristics and their impact on Financial Statements, Ethical Considerations in Behavioral Accounting, Behavioral Auditing Techniques and Tools, Future Trends in Behavioral Accounting.

Module III: ESG

Meaning, ESG Reporting Frameworks, ESG Metrics in Financial Statement, Role of Accountants in ESG Strategy, ESG Impact on Valuation and Investment, Stakeholder engagement in ESG Reporting. ESG Performance – Definition, Process and measurement. Models/Approaches to measure business sustainability: Altman Z-score Model, Risk Adjusted Return on Capital, Economic Value Added (EVA), Market Value Added (MVA), Sustainable Value-Added Approach.

Module IV: AI and Accounting

The Role of AI in Modern Accounting, Key Benefits of AI in Accounting, AI use cases in Accounting, AI tools for accountants, Ways to Implement AI in Accounting system, Challenges in Implementation and Ways to overcome challenges of AI Implementation in Accounting, Compliance and Ethical consideration, Future trends in AI-Driven Accounting.

INDIRECT TAXES WITH GST

Course Code: DCOM2805 **Credit Units: 04**

Course Objectives: To provide students with adequate theoretical and working knowledge about GST and its practical application in unification of indirect tax system in India. The course intends to make students aware of the latest developments and changes being incorporated in GST at the systemic level and its implications in the process of economic and financial integration.

Course Contents:

Module 1:

Concept of Indirect Taxes -Advantages and disadvantages, difference between direct and indirect tax, Principles of Indirect Taxes, Evolution of GST concept, ,GST Laws, Constitutional Perspectives – Cooperative Federalism in economic system Adjudication and offenses, Application of GST in tax sharing – CGST/SGST/IGST, Classification of goods and services in GST assessment, Exemption from Tax, Composition levy. , Valuation of Taxable Services

Module 2:

Basic Framework of GST – Unification of indirect tax system, GST Council – composition, objectives, functions and significance, Tax sharing and disbursement mechanism between the Centre and states, Responsibilities of various stakeholders – government, firms, traders, consumers,. Registration, Tax invoice, Returns. Input Tax Credit, Calculation of VAT, Concept of CENVAT.

Module 3:

Concept and General Principles of VAT, Practical Problems on VAT, Administration of GST – GST Network, Registration, Tax Invoice, , Electronic way bill for interstate movement of goods, Computation of GST Liability, , Concept of times value of supply, Filing of Returns, Payment of Tax, Search, Seizure & arrest, e-filing of service returns, Offences & Penalties

Module 4:

Goods and excisable goods, Refunds and appeals, General Procedures, Safeguard Measures – Anti-profiteering clause, Reverse charge mechanism, Assessment & Audit, Inspection – Concept of HSN and SAC, Appeals & Revision, Implications on Tax terrorism, corruption

Module 5:

Basic Countervailing and anti-dumping Duty, Protective duty, Safeguard Duty, Comparative analysis between GST in India and other countries such as Canada, France, Australia and China, Advantages and Disadvantages, Custom Laws, Import and Export Procedures,

Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; **P** -Project/Seminar/Quiz/Viva; **HA**-Home Assignment; **CT**-Class Test; **EE**-End Semester Examination

PUBLIC FINANCE & TAX PRACTICES

Course Code: DCOM2806 **Credit Units: 04**

Course Objective:
To provide students with a foundational understanding of public finance, its principles, and its role in economic development. To explore the relationship between government revenue, expenditure, and economic policies.

Course Contents:

Module 1: Origin and Development of Public Finance, Meaning, public finance and federal finance, Meaning, Importance, Scope and categories, Role of Finance Commissions, public finance and private finance, Principles of Taxation and Government Expenditure, Benefit approach, allocation of public goods, Ability to pay approach, excess burden of taxes

Module 2: Tax Policy and administration in India, Raising of Public Funds
Sources and classification of public revenues, incidences and shifting of taxes
Distribution of Public Funds, categories, Effect on production, employment, distribution and stability, public debt and fiscal deficit

Module 3: Public Debt – Meaning and Types, Public Debt Management and Taxation Development of Federal Finance in India, The constitutional arrangements, Role of Finance Commissions Role of Fiscal Policy Towards Public Goods and Externalities

Module 4 : Effects of Fiscal Policy, Central and State Finances, Sources and uses of funds, Types of Funds , relation between planning and central budgeting State Finances- Sources and uses of funds, Fiscal Federalism-issues of federalism

Module 5: Constitutional Provisions, Financing of Five-year Plans Changing scenario of Indian tax Structure, new economic policy since 1991 Indian Fiscal Policy and Deficit Financing,

Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	15	5	5	70

A-Attendance; **P**-Project/Seminar/Quiz/Viva; **HA**-Home Assignment; **CT**-Class Test; **EE**-EndSemester Examination

DATA ANALYSIS & VISUALISATION USING SOFTWARE

Course Code: DCOM2839 **Credit Units: 04**

Prerequisite: Basic knowledge of business statistics and computer applications

Course Objectives:

- To introduce students to the principles of data analysis.
- To develop skills in using software tools for analyzing and visualizing business data.
- To make students proficient in interpreting data-driven insights.
- To foster decision-making abilities using data analysis.

Course Content:

Module 1: Introduction to Data Analysis

Types of data (qualitative vs. quantitative, continuous vs. discrete), Importance of data analysis in business decision-making, Basic concepts of statistics: Mean, Median, Mode, Range, Variance, Standard Deviation

Module 2: Data Collection and Cleaning

Sources of business data (Surveys, Transactions, Web Data), Introduction to data cleaning techniques (handling missing values, outliers, and errors)

Module 3: Basics of Excel for Data Analysis

Data Manipulation and Analysis in Excel: Data validation, conditional formatting, PivotTables and Pivot-Charts, Descriptive statistics functions in Excel, Creating and using named ranges

Module 4: Advanced Excel Techniques

Data Visualization in Excel: Creating and formatting various charts: Bar, Line, Pie, Scatter, etc. Introduction to Dashboards, calculating mean, median, variance, standard deviation and standard error.

Module 5: Introduction to Statistical Software

Introduction to Statistical Software: Overview of popular software for data analysis: SPSS and R, Choosing the right tool for different data analysis tasks

Basic Analysis Using SPSS/R: Setting up data in SPSS/R, Descriptive statistics and data visualization in SPSS/R, Introduction to hypothesis testing (t-tests, chi-square tests)

Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

Suggested Textbooks & References:

QUANTITATIVE TECHNIQUES FOR BUSINESS DECISIONS

Course Code: COM4102 **Credit Units: 03**

Course Objective:
The objective of the course is to acquaint the students with the use of quantitative models in decision making.

Course Contents:
Module-I : Introduction
Introduction: Quantitative approach to management decision making. Linear Programming: Mathematical formulation of linear programming problems and their solution using graphic approach and simplex algorithm. Duality Sensitivity analysis. Big M Method

Module-II : Transportation
Transportation: Solving the problem, testing optimality MODI method. Cases of unbalanced problems, degeneracy, maximization objective, multiple solutions and prohibited routes.

Module-III
Assignment: Solving the problem. Cases of unbalanced problems, multiple optimum solutions, maximization objective and unacceptable assignments. Integer Programming: problem Formulation and solution.

Module-IV
Game Theory: Games of pure strategy. Games of mixed strategy. Dominance. Queuing Theory: Elements of a queuing system. Models with Poisson arrival and services rates, single server and infinite and finite population.

Module-V: Sequencing
Sequencing: n-jobs to be processed on two machines in the same order of machines. N-jobs to be processed on m machines in the same order of machines – by converting it into a two – n machine case. Two jobs to be processed on machines in the different orders of machines.

(The emphasis should be on concepts and application of concepts)
Examination Scheme:

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; **P**-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion **CT**-Class Test; **EE**-End Semester Examination

Suggested Readings:

AUDITING

Course Code: COM4105 **Credit Units: 03**

Course Objective:
To provide knowledge of auditing principles, procedures and techniques in accordance with the professional standards and requirements.

Course Contents:
Module-I: Introduction
Introduction to auditing Introduction – meaning- definition – difference between accountancy and auditing – types of audit—advantages of auditing – preparation before commencement of new audit

Module-II: Internal Check & Control
Internal check - Meaning and objects of internal check – internal control-meaning definition-fundamental Principles-internal check as regards wages, cash sales, cash purchases - internal check in a departmental stores-internal audit – meaning-importance – advantage and disadvantages. Duties and Responsibilities of an auditor.

Module-III: Valuation & Verification of Assets & Liabilities
Verification and valuation of assets and liabilities: Meaning and objectives – position of an auditor as regards to the valuation of assets – verification and valuation of different items – assets –fixed assets - goodwill – stock in trade – investments – liabilities – capital – debentures – bills payable sundry creditors – contingent liabilities –

Module-IV
Audit of different organizations drafting of audit program or trading and non-trading organization in a tabular form. Preparation of clean and qualified audit report with special reference to manufacturing and other Companies Audit Report 1975

Module-V
Visit an audit firm, write about the procedure followed by them in Auditing the books of accounts of a firm. Record the verification procedure with respect to any one fixed asset.
Prepare a qualified or clean audit report for a given situation.
Audit Program, Draft an audit program.

Examination Scheme:

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; **P**-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion **CT**-Class Test; **EE**-End Semester Examination

COMPUTER APPLICATIONS IN BUSINESS

Course Code: COM4106 **Credit Units: 03**

Course Objective:
The purpose of this course is to equip the students with fundamental aspects of computers and communication and their application in Commerce.

Course Contents:
Module-I: Introduction
Introduction to Data Information, and knowledge and IT. Changing decision making scenario; Quality of information role of IT in information generation and value addition.

Module-II: Computer Hardware & Software
Computer Hardware and Software: Types of computer systems – micro, mini, mainframe, super. Personal Database Management System: Concept of Database Management System, database Design - Physical and Logical. Data computers –its main component and configuration. Operating system, Application Software. Programming Language.

Module-III : Introduction to Internet
Internet and World Wide Web: History and future of Internet. Web client and Web-Server. Web page and Website. Domain Name System. WWW as a marketplace. Client side programming and server - side programming.

Module-IV
Desktop Application: Important features of Word processing, Presentation, Graphics and Spreadsheet Application Software. Statistical Packages: for Analysis of Variance Multi-variate analysis, Factor, Cluster Discriminant and Regression Analysis.

Module-V : Database Management system
Databases Management System: Concept of Database Management System. Database Design – Physical and Logical. Data bases and tables Forms, Queries and Reports. SQL. Client server Architecture, Distributed Databases.

Module-VI : Networking
Fundamentals of Networking and Communication: LAN, MAN, WAN, Networking Topologies Data communication. Broad Band Communication, Wireless Mobile Communication.

Module-VII: Management Information System
Management information system: Transaction processing system (TPS) Traditional v/s contemporary TPS. Decision support system (DSS). Expert system. Recent developments in Computer Application.

Examination Scheme:

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; **P**-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion **CT**-Class Test; **EE**-End Semester Examination

Suggested Readings:

MANAGERIAL ACCOUNTING

Course Code: COM4201 **Credit Units: 03**

Course Objective:
The objective of the course is to enable students to acquire sound Knowledge of concepts, methods and techniques of management accounting and to make the students develop competence with their usage in managerial decision making and control.

Course Contents:
Module-I: Introduction
Management Accounting – Nature and Functions; Financial vs. Management Accounting; Cost vs. Management Accounting; Role of Management Accountant, Cost Concepts and Classifications.

Module-II: Cost-Volume-Profit Analysis
Cost-Volume-Profit (CVP) Analysis – Contribution Margin; Break – Even Analysis; Profit Volume (P/V) Analysis; Multiple -Product Analysis; Optimal use of Limited Resources, Relevant Information and Short -Run Managerial Decisions – Managerial Decision Making; Decision Making Process; Differential Analysis; Types of Managerial Decisions – Make/Buy, Add/Drop, Sell/ Process Further, Operate/Shutdown, Special Order, Product-Mix, Pricing Decisions.

Module-III: Budgeting
Budgeting – Nature and functions; Preparation of Different Types of Budgets, Fixed Versus Flexible Budgeting.

Module-IV: Marginal and Standard Costing
Variable and Absorption Costing – Concept, Comparison, Applications of Variable Costing, Preparation of Income Statements. Standard Costing – Concept, Advantages; Types of Standards; Variance Analysis; Materials, Labour, Overhead; Managerial Uses of Variances.

Module-V: Responsibility Accounting
Responsibility Accounting and Divisional Performance Measurement – Advantages and Disadvantages of Divisionalisation; Concept of Responsibility Accounting; Responsibility Centres – Cost Centre, Revenue Centre, Profit Centre, Investment Centre, Responsibility Performance Reporting, Divisional Performance Measurement – Measures of Performance; Return on Investment (ROI) Versus Residual Income (RI); Non- Financial Performance Measures; Transfer Pricing Methods.

Examination Scheme:

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; **P**-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion **CT**-Class Test; **EE**-End Semester Examination

CORPORATE ACCOUNTING

Course Code: COM4203 **Credit Units: 03**

Course Objective:
This course enables the students to develop awareness about Corporate Accounting in conformity with the Provision of Companies' Act and latest amendments thereto with adoption of Accounting Standards that are likely to be introduced from time to time.

Course Contents:

Module-I: Accounting for Shares and Debentures
Accounting for share capital transactions - issue of shares at par, at premium and at discount; forfeiture and re-issue of shares; buy-back of shares; redemption of preference shares - statutory requirements, disclosure in balance sheet; rights issue, with advanced problems. Issue of debentures - accounting treatment and procedures; redemption of debentures; conversion of debentures into shares, different methods for redemption of debentures.

Module-II: Final Accounts of Company
Preparation and presentation of final accounts of joint stock companies as per company law requirements; provisions and reserves; determination of managerial remuneration; appropriation out of profits; transfer of profits to reserves; payment of dividend, transfer of unpaid dividend to Investor Education and Protection Fund; bonus shares and payment of interest out of capital.

Module-III
Accounting treatment for amalgamation, absorption and reconstruction of companies; internal and external reconstruction, Advanced Problems.

Module-IV: Holding & Subsidiary Company
Holding and subsidiary companies - accounting treatment and disclosures; consolidation of accounts.

Module-V: Valuation of Goodwill & Shares
Valuation of Goodwill and Shares
Goodwill - Meaning – Definition – Elements of goodwill – Types of Goodwill – Purchased Goodwill – Nonpurchased or inherent Goodwill – Valuation of Non-purchased Goodwill – Average Profit Method – Super Profit Method – Capitalization of Average Profit Method – Capitalization of Super Profit Method – annuity method Shares - Meaning – need for valuation – factors affecting valuation – methods of valuation – Asset Backing or Intrinsic Value Method –Yield Valuation Method – Dividend Yield –Fair Value method – value of right shares – valuation of preference shares.

Module-VI: Liquidation Accounts
Voluntary Liquidation – Preparation of Liquidator's Statement of affairs – order of payment - Calculation of commission on Assets Realized – payment to unsecured creditors – payment to Unsecured creditors other than preferential creditors – calculation of pro rata- treatment of uncalled Capital – liability of contributors.

Examination Scheme:

E-COMMERCE

Course Code: COM4205 **Credit Units: 03**

Course Objective:
The purpose of this course is to develop understanding of Web - based Commerce and equip them to assess e-commerce requirements of a business and develop e –business plans and to interact with various IT professionals who m ay be developing e-commerce applications.

Course Contents:
Module-I: Introduction
Introduction to Electronic Commerce: Meaning, nature and scope; Business application of e-commerce; Global trading environment and adopting of e -commerce, evolution of World Wide Web, future of Web.

Module–II
Web-site Design: Web sites as market place; Role of web site in B2C e -commerce; Web site strategies; Web site design principles; push and pull approaches; Alternative methods of customer communication such as e -mail, BBA; E-mail etiquette and e-mail security.

Module–III
Business Models of E-Commerce; B2B, B2C, B2G and other models of e - commerce; Applications of e-commerce to supply chain management; Product and service digitisation; Remote servicing, procurement and online marketing and advertising; Applications to Customer Relationship Management. Business to Consumer E-Commerce Applications: Cataloging, Order planning and order generation; Cost estimation ad pricing; Order receipt and accounting; Order selection and prioritization; Order scheduling , fulfilling and delivery, Order billing, Post sales services.

Module–IV
Business to Business E-Commerce: Need and alternative models of B2B e - commerce; Using public and private computer networks for B2B trading; EDI and paperless trading; characteristic featur es of EDI service arrangement; Internet based EDI; EDI architecture and standards; Vans; Costs of EDI infrastructure; Reasons for slow acceptability of EDI for trading; E -marketing-Traditional web promotion; Web counters; Web advertisements. XML, XML -EDI and its application.

Module–V: E-Payment System
Electronic Payment System: Types of payment systems –e-cash and currency servers, e-cheques, credit cards, smart cards; electronic purses and debit cards; Operational, credit and legal risk of e - payment, Risk management options for epayment systems, Set standards.

Module–VI
Security Issues in E-Commerce: Risks of e-commerce –Types and sources of threats, Protecting electronic commerce assets and intellectual property; Firewalls; Client server network security; Data and message security; S ecurity tools; Digital identity and electronic signature; Encryption and concepts of public and private key infrastructure; Risk management approach to e -commerce security.

Module–VII : Environment of E-commerce
Environment of E-Commerce: Issues regarding language, culture and infrastructure, Legal environment-borders and jurisdiction, contracting and contract enforcement;58 International cyber laws – cyber laws – Aims and salient Provisions; Cyber laws in India and their limitations; Taxation and e-commerce, Ethical Issues in e - commerce.

CORPORATE LAW

Course Code: COM4301 **Credit Units: 03**

Course Objectives:
The objective of the course is to familiarize the students with the nature of legal regulatory environment of corporate enterprises in India.

Course Contents:
Module–I
Provisions of the Companies Act, 2013 and case law relating to Managerial remuneration, Accounts and audit. The Companies Amendment Act, 2015 (Their Main Provisions).

Module–II
Prevention & Money Laundry Act, 2002 – Definition, Punishment for the offence of Money Laundry, Obligation of Banking Companies, Appellate Tribunal, Special Court, Fines & Penalties.

Module–III
SEBI Act, 1992 – Functions of SEBI. Powers of SEBI in relation to securities markets. Guidelines for Securities issues.

Module–IV
Consumer Protection Act, 1986 – Objectives. Rights of consumers. Mechanism of Redressal of Consumer grievances.

Module–V
Environment Protection Act, 1986 – Objectives. Powers of the Central Government, Major Provisions.

Module–VI
Foreign Exchange Management Act (FEMA). Emerging issues in Corporate Laws and Governance. Introduction, Definition, Regulation & Management of Foreign Exchange, Contravention & Penalties, Miscellaneous Provision in Brief.

Examination Scheme:

Components	A	P	C	CT	EE

COST ACCOUNTING

Course Code: COM4302 **Credit Units: 03**

Course Objective:
To get an expert knowledge in the area of cost management and cost control to enable effective management decisions.

Course Contents:

Module I: Cost Accounting
Introduction – Meaning of Cost, costing and Cost Accounting – Comparison between Financial Accounts and Cost Accounts – Application of Cost Accounting – Designing and installing a Cost Accounting system – Cost concepts and Classification of Costs – Cost Module – Cost Center – Elements of Cost – Preparation of cost sheet – Tenders and Quotations – Problems.

Module II: Labour Costing
Control of labour cost – Labour Turn Turnover – Causes and effects of labour turnover – Meaning of Time and Motion Study, Merit Rating, Job Analysis, Time keeping and Time booking – Idle time, causes and treatment – Overtime – Methods of Wage Payment, Time rate and Piece Rate – Incentive Schemes – Halsey Premium Plan – Rowan Bonus Plan – Taylor's and Merrick's differential piece rate systems – Problems.

Module III: Overhead Costing
Definition – Classification of overheads – Procedure for accounting and control of overheads – Allocation of overheads – Appointment of overheads – Apportionment of Service department costs to production departments – Repeated Distribution method – Simultaneous equation method – absorption of OH's – Methods of Absorption – Percentage of direct material cost – Direct Labour Cost – Prime Cost, Direct Labour hour rate and Machine Hour Rate – Problems.

Module IV: Costing Methods
Costing Methods Introduction - Job Costing – Batch Costing – Contract Costing-
Process Costing – principles – distinction between Process and Job – Preparation of process accounts – treatment of normal loss – abnormal loss – abnormal gain – Joint and By-products. Service costing. Unit, Output and Operating Costing,

Module V:
Reconciliation of Cost and Financial Accounts - Need for reconciliation – Reasons for difference in profits – Problems on preparation of Reconciliation statements including Memorandum Reconciliation account,

Examination Scheme:

ADVANCE BUSINESS STATISTICS AND RESEARCH METHODOLOGY

Course Code: COM4303 **Credit Units: 03**

Course Objective:
The objective of the course is to acquaint students with some of the important statistical techniques for managerial decision making .The emphasis will be on their applications to business and economic situations.

Course Contents:
Module-I: Probability and Expectation
Probability and Expectation: Approaches to probability. Addition, multiplication and Bayes Theorem, Mathematical Expectation. Probability Distribution: Binomial, Poisson, Exponential, Beta and Normal Distributions.

Module-II: Statistical Decision Theory
Statistical Decision Theory: Risk and uncertainty, Expected value approach, Marginal analysis, Decision tree.

Module-III: Sampling and Sampling Distributions
Sampling and Sampling Distributions: Methods of sampling, Sampling distribution of a statistic and its standard error. Point Estimation and interval estimation, Properties of an estimator.

Module-IV: Hypothesis Testing
Hypothesis Testing; Power of a test, Large sample tests for proportions, means and standard deviations. Small sample tests –t and F tests. Design of Experiments and analysis of variance. Non-Parametric Tests: Chi-square test, Sign test, Median test and Rank correlation test.

Module-V: Inventory Control
Inventory Control: Techniques of selective control, Economic order quantity (EOQ) models- classical, gradual replenishment without shortages, price breaks and planned stock outs, Deciding optimum safety stock and reorder level. PERT/CPM: Networking with one estimate of time. Networks with three estimates of time. Time-cost trade-off. PERT/cost. Resource allocation and resource leveling.

Module-VI: Regression Analysis
Regression Analysis: Simple and linear regression analysis up to three variables. Statistical Quality Control: Control charts for variables and attributes, Acceptance sampling.

Case Studies: Application of statistics to some cases of business enterprise are required to be discussed.

Examination Scheme:

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; **P**-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion **CT**-Class Test; **EE**-End Semester Examination

SUMMER INTERNSHIP EVALUATION

Course Code: COM4335 **Credit Units: 06**

GUIDELINES FOR INTERNSHIP FILE

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalise efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal class room situations. These attributes are intellectual ability, professional judgment and decision making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (Internship File). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The layout guidelines for the Internship File

- A4 size Paper
  - font: Arial (10 points) or Times New Roman (12 points)
  - line spacing: 1.5
  - top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

The File will include *five sections* in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. The Title Page--Title - An Internship Experience Report for (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. Table of Content--an outline of the contents by topics and subtopics with the page number and location of each section.
3. Introduction--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.
4. Main Body--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.
5. Appendices--include pamphlets, forms, charts, brochures, technical and descriptive literature, graphs and other information related to your Internship experience.

The Main Body will have three sections and will include the following items which will be evaluated for the final assessment:-

Manesar Gurgaon-122413

An analysis of the company/organization in which the student is working

A personal review of the student's management skills and how they have been developed through the programme.

The research report that the student has prepared on the project assigned to him by the organization. (Incase a student is not assigned a specific research project in the organization, he has to select any one aspect of the organization and prepare a research report on it).

ASSESSMENT OF THE INTERNSHIP FILE

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

STUDENT ASSESSMENT RECORD (SAR)

Management File Item	Criteria for successful completion of the item
1. Analysis of organization (1500- 2000 words)	• Clear presentation of ideas and analysis • Provides an organizational diagram, following organization presentation conventions • Analysis covers the organization's: ➢ Business strategy and mission ➢ Structure ➢ Resources and assets ➢ Current financial performance ➢ Leadership/decision-making style ➢ Staffing and skill base ➢ Products/services and customers
2. Personal review of Management skills development (1000-1500 words)	• Clear presentation of ideas and analysis • Demonstrate awareness of own management skills • Presents critical analysis of own management effectiveness, supported with examples • Provides evidence of development of specific management skills e.g. strategic, financial, leadership • Explains how new skills and learning have benefited the organization and self
3. Design of Research Project (1500- 2000 words)	• Clear presentation of ideas and analysis • Justifies the choice of subject for the research project and why this might be beneficial to the organization • Selects and justifies appropriate research methods for the project • Demonstrate understanding of the key stages in undertaking a research project • Indicates which analytical/statistical tools would be most appropriate and why • The design plan takes account of the resourcing implications of carrying out the research e.g. staffing and other costs

MARKETING RESEARCH

Course Code: COM4409 **Credit Units: 03**

Course Objective:
The course aims at exposing the students to the concept, tools and techniques of marketing research and developing their skills to be able to apply research techniques to aid marketing decision making.

Course Contents:
Module I
Introduction : Meaning, nature and importance of marketing research; Marketing research and scientific method; Research reliability and validity; Problems in conducting marketing research; Marketing information system (MIS); Ways of conducting marketing research; Syndicated research.

Module II
Marketing Research Process : Steps involved in conducting marketing research; Problem identification; Determining information needs; Developing marketing research proposal.

Module III
Research Design : Meaning and importance; Types of research designs – explorative, descriptive and conclusive researches; Secondary data – sources, uses and limitations; Primary data collection methods – questioning techniques and observation methods; Online data sources and research; Questionnaire preparation.

Module IV
Sample Design and Field Work : Defining universe and sampling unit; Determining sampling frame; Probability and non-probability sampling methods; Sample size determination; Field work and data collection – sampling and non-sampling errors.
Data Analysis and Report Preparation: Data editing, coding tabulation and graphical presentation; Univariate and multivariate data analyses techniques and their applications in marketing research; Report preparation, presentation and follow-up.

Module V
Marketing Research Applications : Consumer research – behaviour and motivation research, attitude measurement and scaling techniques; Product research; Advertising research; Marketing and sales forecasting; Sales analysis. Marketing Research in India : Status, organization and developments; Ethical issues in marketing research.

DISSERTATION

Course Code: COM4437 **Credit Units: 06**

The Aims of the Dissertation

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree

The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

The Dissertation Topic

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialisation.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning your dissertation

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The dissertation plan or outline

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

Dissertation format

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary**
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.
  Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.
  For books, the following details are required:
  Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

Guidelines for the assessment of the dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

9. Has the student been regular in his work?
10. Layout of the written report.

FOOD PRODUCTION FOUNDATION-I

Course Code: HMC2101 **Credit Units: 02**

Course Objective:
The curriculum is based on to familiarize the students with the basic concepts of food such as –
- To make the students learn about the professionalism and basic etiquette of culinary art
- To make them learnt about raw material, uses, composition, benefits and methods
- To sharpen the culinary skills in the field of food production
- To impart knowledge of history of culinary art and changes along with the times
- To give the basic idea about physical and chemical composition of different food products.

Course Contents:

Cookery
Module – I :Food Service industry
1.1 Culinary History

Module – II :Standards of Professionalism
2.1 Levels of Skills
2.2 Attitude and Professionalism in Kitchen
2.3 Attires of chefs

Module – III :Kitchen Organization
3.1 Kitchen Brigade & Work Flow
3.2 Duties & responsibilities of various chefs
3.3 Interdepartmental Relationship

Module – IV :Kitchen Equipment
4.1 Introduction to Different Equipments
4.2 Safety procedure in handling equipment

Module – V :Basic Cookery Principles
5.1 Transfer of heat
5.2 Aims & Objective of Cooking
5.3 Effect of Heat on Cooking
5.4 Characteristic of Raw Materials
5.5 Preparation of ingredients
5.6 Cooking Times
5.7 Different fuels used in commercial kitchen
5.8 Methods of Cooking with advantages & disadvantages
5.9 Pre-Preparation
5.10 Culinary Terms Indian & Western

Module – VI : Commodities

6.1 Cereals – Types & Forms in Which The Products Are Available in The Market, Their Vernacular & English Names & Uses- Wheat, Rice, Maize, Oats, Barley, Ragi, Bajra & Other Millets
6.2 Pulses – Identification of The Wide Range of Pulses Available in The Market, The Vernacular & English Names and Uses.
6.3 Herbs, Spices & Condiments – Classification, Identification, Vernacular & English Names.
6.4 Fats & Oils – Types & Forms, Sources, Processing and Uses of Vanaspati, Margarine, Refined, Double Refined, Unrefined. Butter etc.

Bakery &Confectionery

Module – VII : Introduction to Bakery and Patisserie

7.1 History of Baking
7.2 Baking As An Art and Science

Module – VIII : Basic Principles of Bakery

8.1 Formulas and Measurements
8.2 Baking Process

Module – IX : Equipment Used in Bakery

9.1 Use, Care, Cleaning, Storage

Module – X : Ingredients Used in Bakery - Types and Use

10.1 Flour
10.2 Fat
10.3 Cream
10.4 Sugar
10.5 Milk
10.6 Egg

Module – XI : Definition and Terms Used in Bakery

Module – XII : Yeast Products

12.1 Importance of Yeast in Baking –
12.2 Types, Storage and Use

Module – XIII : Bread Making

13.1 Functions of ingredients Used
13.2 Steps in Bread Making
13.3 Bread Diseases –Origin and Remedies
13.4 Different Recipes of Breads - Rye Bread, Corn Bread, French bread, international Breads
13.5 Types of Rolls - Soft Rolls; Hard Rolls
13.6 Quick Breads.- Ingredients, Types of Batter and Dough, Examples

Examination Scheme:

Components	**V**	**H**	**CT**	**A**	**EE**

FOOD & BEVERAGE SERVICE FOUNDATION-I

Course Code: HMC2102 **Credit Units: 02**

Course Objective:

At the end of the semester the students will be able to –

Explain the growth and role of hotel industry and catering establishment
Understand the various types of hotels and their features
List and explain various catering establishment with their features
Explain staff organization structure of food and beverage department
Describe and understand job description of each personnel working in each F&B service outlet
List various F&B service equipments with its use and care.

Course Contents:

Module –I : Introduction to the World of Hospitality, Food & Beverage

1.1 Sectors of Hospitality industry
- 1.1.1 Railway
- 1.1.2 Airline
- 1.1.3 Cruise Liners
- 1.1.4 Industrial Catering
- 1.1.5 Institutional Catering

1.2 Major Hospitality Organisations - international & National
- 1.2.1 Oberoi, Taj Groups & Others

Module –II : Introduction to The Hotel industry

2.1 Classification of Catering Establishments
2.2 Types of F&B Outlets
2.3 Food & Beverage Departmental Organization
2.4 Duties & Responsibilities of F&B Staff at Various Levels
2.5 Attributes of a Hotelier

Module -III : Ancillary Departments

3.1 Still Room / Pantry
3.2 Wash Up (Kitchen Stewarding)
3.3 Plate Room

Module – IV : Restaurant Equipment

4.1 Glassware
4.2 Crockery
4.3 Silverware
4.4 Furniture
4.5 Linen

Module – V : Meals & Menu

5.1 Types of Meals
- 5.1.1 EMT
- 5.1.2 Breakfast
- 5.1.3 Lunch
- 5.1.4 Dinner

Prof. (Dr.) Anil Kumar

FRONT OFFICE FOUNDATION

Course Code: HMC2103 **Credit Units: 02**

Course Objective:
At the end of the semester the students will be able to explain & understand-
The growth, role of tourism in hospitality and hotel industry
The classification and main features of hotels
The Front Office staff and organization structure, duties/responsibilities of each personnel
Appraisal of Front Office equipment and furniture, welcoming of guest and telephone handling

Course Contents:

Module – I : Introduction to the Hospitality Industry

Module – II : Classification of Hotels
- 2.1 Size and Types of Hotel
- 2.2 Levels of Service
- 2.3 Ownership and Affiliation

Module – III :Basic Criteria of Star Categorization of Hotels

Module – IV :Hotel Organisation
- 4.1 Organization Chart

Module – V :Types of Rooms

Module – VI :Functional Organisation of Front office
- 6.1 Different Sections of Front office Department & Their Brief Functions

Module – VII : Staff Organisation of Front office Department
- 7.1 Duties & Responsibilities of Front office Department

Module – VIII :Front Desk Layout and Equipment
- 8.1 Layout
- 8.2 Equipment and Its Utility

Module – IX :Rate Categories
- 9.1 Food Plans
- 9.2 Basis of Charging Room Rates
- 9.3 Tariff Card

Module – X :Front office Systems
- 10.1 Non-Automated
- 10.2 Semi- Automated
- 10.3 Fully- Automated

HOUSEKEEPING FOUNDATION

Course Code: HMC2104 **Credit Units: 02**

Course Objective:
At the end of the semester the students would have a through knowledge of:
Organization of Housekeeping department and its basic functioning
All agents and equipment used for cleaning of all possible surfaces
Room layouts and what are constitutes in a guest room
Pests found in the hotel and their control.

Course Contents:

Module – I : The Role of Housekeeping in Hospitality Operation
- 1.1 Role of Housekeeping in Guest satisfaction and repeat Business

Module – II : Introduction to Housekeeping Department
- 2.1 Identifying Housekeeping Responsibilities
- 2.2 Organizational Structure of Housekeeping Department for: Small Hotel, Medium Hotel, Large Hotel
- 2.3 Duties & Responsibilities of Housekeeping Staff
- 2.4 Personality Attributes of Housekeeping Staff
- 2.5 Layout of the Housekeeping Department

Module – III : Cleaning Equipments
- 3.1 General Consideration for Selection
- 3.2 Classification & Types of Equipments
- 3.3 Method of Use and Mechanism for Each Type
- 3.4 Care and Maintenance

Module – IV : Cleaning Agents
- 4.1 Classification
- 4.2 General Criteria for Selection
- 4.3 Use, Care & Storage
- 4.4 Distribution & Control

Module – V :Use of Computers in Housekeeping Department

Module – VI : Care and Cleaning of Different Surface
- 6.1 Metals, Glass, Ceramics, Wood, Wall finishes, Floor finishes

Module – VII : Inter-Departmental Coordination with
- 7.1 Front office
- 7.2 Maintenance
- 7.3 Food Production & Service Areas
- 7.4 Personnel
- 7.5 Purchase, Receiving & Stores
- 7.6 Laundry
- 7.7 Computer Centre
- 7.8 Security

APPLICATION OF COMPUTERS

Course Code: HMC2105 **Credit Units: 01**

Course Objective:
The basic objective of the course is to introduce the students to the world of computers and computer technology. The students will be introduced to the basic concept of operating system, word processing, database, presentation.

Course Contents:
Module I: Computer Fundamentals
Elements of a Computer system
Characteristic of Computers
Classification of Computers
Limitations
Hardware features and uses
Generations of Computer
Primary and Secondary Storage Concepts
Data Entry Devices
Data Output Devices
Software Concepts
System Software
Application Software
Language Classification
Compilers and Interpreters

Module II: Operating Systems/Environment
Introduction to Windows
GUI/Features
What are Window & Window 95 and above
Part of a Typical Window and their functions

Examination Scheme:

Components	V	H	A	CT	EE
Weightage (%)	05	05	05	15	70

FOOD PRODUCTION FOUNDATION LAB-I

Course Code: HMC2106 **Credit Units: 03**

Course Objective:
At the end of the semester the students will be able-
- To learn about the basics of food production in continental and Indian cuisine
- To make a menu and would be able to explain the meaning of the dishes
- To prepare the basic stock, sauce and soup
- To use the knife and other equipments confidently
- To cut all kind of vegetable cutting.

Course Contents:
Practical
Module – I : Cookery
- Identification of Kitchen Equipments
- Identification of raw materials
- Preparing & Cooking Vegetables
- Different cuts of vegetables
- Demonstration of various Cooking Methods
- Compiled 3 course menu

Module – II : Bakery & Confectionery
- Preparation of Breads using different Methods
- Identification & Understanding of Bread Ingredients
- Preparation of different types of bread rolls
- Preparation of Various Quick Breads – Muffins, Pancakes

Examination Scheme:

Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	5	5

End-Term: 70 Marks

Components	JE	VV	INDENT	LE
Weightage (%)	05	05	10	50

FOOD & BEVERAGE SERVICE FOUNDATION LAB-I

Course Code: HMC2107 **Credit Units: 01**

Course Objective:

At the end of the semester the students will be able-

- To use and maintain all items of crockery, cutlery, glassware, flatware and hollowware used in a restaurant
- To arrange the restaurant and connected service area
- To serve water & food as per the standard rules

Course Contents:

Module – I : Basics of Service

- Service Grooming and Restaurant Etiquettes.
- Identification of equipments
- Mis-en-Place and Mis-en-Scene

Module – II : Essentials of Service

- Writing a Menu in French
- Food and Beverage service sequence
- Water pouring and seating a guest.
- Laying and relaying of Tablecloth
- Napkin folds
- Carrying a Salver or Tray
- Sideboard setup

Module – III :Service at Table

- Rules for laying table - Laying covers as per menus
- TDH and A la carte cover Layout
- Handling service gear
- Carrying plates, Glasses and other Equipment
- Clearing an ashtray
- Crumbing, Clearance and presentation of bill
- Sequence of Service of a Meal
- Breakfast table lay-up
- Silver service
- American service

Module – IV : Basics of Service

- Situation handling
- Restaurant reservation system
- Hostess desk functions
- Order taking – writing a food KOT, writing a BOT

FRONT OFFICE FOUNDATION LAB

Course Code: HMC2108 **Credit Units: 01**

Course Objective:

At the end of the semester the students will be able-

- Understand the growth, role of tourism in hospitality and hotel industry
- Explain the classification and main features of hotels
- Describe Front Office staff and organization structure, duties/responsibilities of each personnel
- Do the Appraisal of Front Office equipment and furniture, welcoming of guest and telephone handling.

Course Contents:

- Basic Manners & Attributes for Front Office Operations.
- Communication Skills – Verbal & Non Verbal
- Telephone Handling
- Forms & Formats related to 1st Semester

Examination Scheme:

Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	05	05

HOUSEKEEPING FOUNDATION LAB

Course Code: HMC2109 **Credit Units: 01**

Course Objective:
At the end of the semester the students would have a thorough knowledge of-
- Use of cleaning agents
- Use of cleaning equipment (manual as well as mechanical)
- Cleaning of all kinds of surfaces in a hotel.

Course Contents:
- Identifying Cleaning Equipment & Agents
- Cleaning of Guest Room & Bathroom – Occupied / Vacant
- Cleaning of Various Surfaces
- Composition, Care and Cleaning of Various Surfaces
  - Metals - Brass, Copper, Silver, EPNS, Bronze, Chromium, Aluminum, Stainless Steel & Protective Finishes of Various Kinds
  - Glass-Various Type
  - Leather, Rexine
  - Plastic
  - Ceramic - Various Types
  - Wood- Various Types & Their Protective Finishes

Examination Scheme:

Internal: 30 Marks

APPLICATION OF COMPUTERS LAB

Course Code: HMC2110 **Credit Units: 01**

Course Objective:
At the end of the semester the students would be able to-
- Create folders
- Shortcuts copy files & folders
- Deleting files and exploring windows etc.

Course Contents:

Module I: Window Operations
Creating Folders, Creating Shortcuts, C
opying Files/Folders, Renaming Files/Folders, Deleting Files
Exploring Windows
Quick Menu

Module II: MS Word
Creating a Document, Formatting Documents, Special Effects
Cut, Copy, Paste.
Table, Graphics.
Print Options.

Examination Scheme:

FIELD WORK PROJECT-I

Course Code: HMC2111 **Credit Units: 02**

Course Objective:
Students of hospitality need to go through the basics of practical service exposure in different hospitality outlets. To maximize this exposure students will be send for different hospitality services in all the major & minor areas of operation & management within & outside the campus.

Methodology:
Students should be send for various learning opportunity outside the class room. They should submit the journal after the event is over to assigned faculty from the committee in following format.

- Name of the event
- Location
- Time
- Faculty Responsible
- Task Assigned
- Learning Outcome
- Suggestions

All the assignments should be duly authorized by the faculty responsible for the event.

Student services will be monitored & evaluated by the committee comprising of Program leader & faculty (as approved by HOI) and the marks will be allotted based on the performance, attitude, learning and utilization of knowledge in practical field.

Examination Scheme:

Components	C	S	V	P	JE

FOOD PRODUCTION FOUNDATION–II

Course Code: HMC2201 **Credit Units: 02**

Course Objective:

The curriculum is based on to familiarize the students with the basic concepts of food such as –

- To make the students learn about the professionalism and basic etiquette of culinary art
- To make them learnt about raw material, uses, composition, benefits and methods
- To sharpen the culinary skills in the field of food production
- To impart knowledge of history of culinary art and changes along with the times
- To give the basic idea about physical and chemical composition of different food products.

Course Contents:

Cookery

Module – I :Breakfast Cookery

1.1 Types of breakfast
1.2 International & Indian menu for breakfast
1.3 Various breakfast rolls

Module – II :Commodities

2.1 Elementary Pastas - Method of Manufacture, Ranges Available in The Market e.g. : Macaroni, Spaghetti, Noodle Etc. & Their Uses.
2.2 Milk & Milk Product - Forms in Which Available, Processing e.g. : Full Cream, Fresh Milk, Toned Milk, Skimmed Milk, Buffalo & Cow's Milk; Pasteurized, Sterilised, Dehydrated etc. Khoa, Paneer, Cream, Etc.
2.3 Cream - Process of Making Cream, Types of Cream
2.4 Cheese- Introduction, Types, Processing of Cheese, Serving of Cheese

Module – III :Stocks

2.5 Definition, Elements of Stock
2.6 Classification & uses
2.7 Special care during stock making

Module – IV :Sauces

2.8 Definition
2.9 Classification of Mother Sauces
2.10 Derivatives

Module – V :Soups

2.11 Definition
2.12 Classification With example

Module – VI :Vegetable Cookery

2.13 Basic Knowledge, Identification, Various Cuts.
2.14 Preparation, Storage, Nutritional Aspects

Module – VII :Fruits

2.15 Types, Classification

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

2.16 Preparation, Handling, Storage
2.17 Nutritional Aspects

Bakery & Patisserie
Module – VIII :Cookies

2.18 Definition, ingredients Used & Their Functions, Different Methods Used and Examples

Module – IX :Pastries

2.19 Definition of Pastries
2.20 Classification
2.21 Ingredients Used, Methods
2.22 Usage, Faults

Examination Scheme:

Components	V	H	CT	A	EE

FOOD & BEVERAGE SERVICE FOUNDATION-II

Course Code: HMC2202 **Credit Units: 02**

Module – I :Beverages

1.1 Classification
- 1.1.1 Non-Alcoholic Beverages
  - 1.1.1.1 Types of Waters
  - 1.1.1.2 Soft Drinks
  - 1.1.1.3 Juices / Syrups / Crushes
  - 1.1.1.4 Tea Coffee
- 1.1.2 Alcoholic Beverages
  - 1.1.2.1 Introduction
  - 1.1.2.2 Types

Module – II :Beer

Module – III :Wines

2.1 Introduction to Wines
2.2 Classification of Wines
2.3 Grapes & Factors Affecting Wine Quality
2.4 Vinification
2.5 Production of Red / White / Rosé Wines
2.6 Production of Fortified & Aromatised Wines
2.7 Production of Sparkling Wine
2.8 Wine Producing Regions of the World
2.9 France, Germany, Italy, Spain, Portugal
2.10 USA
2.11 Australia & India
2.12 Food & Wine Harmony

Examination Scheme:

Components	V	H	CT1	A	EE1
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

FRONT OFFICE OPERATION-I

Course Code: HMC2203 **Credit Units: 02**

Module – I :Reservation Activities

- 1.1 Importance of Reservations
- 1.2 Sources of Reservation
- 1.3 Modes of Reservation
- 1.4 Telephone Etiquette
- 1.5 Reservation Activities
- 1.6 Tools of Reservation
  - 1.6.1 Room Status Board
  - 1.6.2 Advance Letting Chart
  - 1.6.3 Density Control Chart
  - 1.6.4 Movement List / Expected Arrival List
- 1.7 Systems of Reservation
  - 1.7.1 Diary System
  - 1.7.2 Whitney System
- 1.8 Processing Group Reservation
- 1.9 Product Knowledge of Receptionists
- 1.10 Up-selling : Techniques
- 1.11 Over-booking : Why & How
- 1.12 Cancellation Procedure
- 1.13 Amendment Procedure

Module – II : Registration

- 2.1 Room Position

Module – III : Pre Arrival

- 3.1 Pre Registration Procedure

Module – IV : On Arrival Procedures

- 4.1 Receiving, Greeting, Welcoming A Guest
- 4.2 Assessing The Guest Requirements
- 4.3 Registration & Rooming Procedure

Module – V : Post Arrival Procedure

Module – VI : Chapter 2 to Chapter 5 for :

- 6.1 FIT
- 6.2 VIP
- 6.3 Group
- 6.4 Foreigner

Module – VII : Room Change Procedure

Module – VIII : Handling of Special Situations Like

- 8.1 DNS
- 8.2 DNA
- 8.3 RNA

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

HOUSE KEEPING OPERATION-I

Course Code: HMC2204 **Credit Units: 02**

Course Objective:

At the end of the semester the students will have a thorough knowledge of-

- Key Control & its importance
- All types of beds and mattresses
- Cleaning Procedures & schedule
- All routine and records maintained of H.K. department
- Pest Control

Module – I :Keys

1.1 Types of keys,
1.2 Key control

Module – II :Types of Beds and Mattresses

Module – III :Introduction to Cleaning

3.1 Principles of cleaning
3.2 Methods of organizing cleaning
3.3 Frequency of cleaning daily, periodic, special

Module – IV :Cleaning Organization

4.1 Guestroom Cleaning
4.1.1 Stacking of Chambers Maid Trolley
4.1.2 Pre – Preparation
4.1.3 Entering the guestroom
4.1.4 Bed Making
4.1.5 Bathroom Cleaning
4.1.6 Second Service
4.1.7 Turndown Service
4.2 Public Area CleaningHotel Entrance, Lobby, Front Office, Restaurants, Elevators, etc

4.3 Guest Room inspection

Module – V :Routine Systems and Records of Housekeeping Department

5.1 Room Occupancy Report,
5.2 Guest Room Inspection Checklists,
5.3 Work Orders, Log Sheet,
5.4 Lost and Found Register and Enquiry File,
5.5 Housekeeper's Report,
5.6 Guest's Special Requests Register,
5.7 Record of Special Cleaning,
5.8 Call Register,
5.9 VIP Lists.

Module – VI :Pest Control

6.1 Definitions of Pests & Control
6.2 Areas of infestations

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

FOOD SCIENCE & NUTRITION

Course Code: HMC2205 **Credit Units: 01**

Course Objective:

At the end of the semester students will be able to-

- Understand functions of Foods which supply our nutritional needs
- Explain how to meet human need nutrients in terms of available foods
- Acquire techniques of preparation which help us meet our needs in an enjoyable manner
- Understand role of nutrients in menu planning

Course Contents:

Module I:Food Science

Definition and scope of Food Science

Module II:Nutrition & Nutrients

Introduction, Type of Nutrients (Macro & Micro Nutrients), Classification of various nutrients, Dietary Sources of various nutrients, Effect of cooking on Nutrients, Uses of various nutrients in food preparation

Module III: Nutrient specific chemical Processes

Dextrinization, Autoxidation (factors and prevention measures), Flavour reversion, Refining, Hydrogenation & winterization, **Gelation, Emulsification, Foamability, Viscosity,** Browning

Module IV:Food Processing

Definition, Objectives, Types of treatment, Effect of factors like heat, acid, alkali on food constituents

Module V: Evaluation of Food

Objectives, Sensory assessment of food quality, Methods
Introduction to proximate analysis of Food constituents, Rheological aspects of food

Module VI: Emulsions & Colloids

Theory of emulsification & Colloids, Types of emulsions, Emulsifying agents, Role of emulsifying agents & Colloids in food preparation

Module VII: Flavour

Definition, Description of food flavours (tea, coffee, wine, meat, fish spices)

Module VIII: Energy

Definition of Energy and Units of its measurement (Kcal), Energy contribution from macronutrients (Carbohydrates, Proteins and Fat), Factors affecting energy requirements, Concept of BMR, SDA, Thermodynamic action of food, Dietary sources of energy, Concept of energy balance and the health hazards associated with Underweight, Overweight

Module IX: Balanced Diet

Definition, Importance of balanced diet, RDA for various nutrients – age, gender, physiological state

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module X: Menu Planning

Planning of nutritionally balanced meals based upon the three food group system, Factors affecting meal planning, Critical evaluation of few meals served at the Institutes/Hotels based on the principle of meal planning, Calculation of nutritive value of dishes/meals

Examination Scheme:

Components	V	A	CT	EE
Weightage (%)	10	05	15	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

FUNDAMENTALS OF ACCOUNTING-I

Course Code: HMC2206 **Credit Units: 02**

Course Objective:

At the end of the semester the students will be able to-

- Understand basic concept of hospitality accounting system
- The meaning and need for accounting
- Distinguish between book keeping and accounting
- Record the transactions using rules of debit and credit
- Ascertain the correct bank balances
- To check the accuracy of accounting records.

Course Contents:

Module I: Introduction to Accounting

Meaning & Definition, Types and Classification, Principles of Accounting, Systems of Accounting, Generally Accepted Accounting, Principles

Module II: Primary Books (Journal)

Meaning and Definition, Format of Journal, Rules of Debit and Credit, Opening entry, simple and compound entries, Practical

Module III: Subsidiary Books (Ledger)

Meaning and Uses, Formats, Posting, Practical

Module IV: Subsidiary Books

Need and Use

Classification

- Purchase book
- Sales book
- Purchase returns
- Sales return
- Journal proper
- Practical

Module V: Trial Balance

Meaning, Methods, Advantages, Limitations, Practical

Examination Scheme:

FIELD WORK PROJECT-II

Course Code: HMC2211 **Credit Units: 03**

Course Objective:
Students of hospitality need to go through the basics of practical service exposure in different hospitality outlets. To maximize this exposure students will be send for different hospitality services in all the major & minor areas of operation & management within & outside the campus.

Methodology:
Students should be send for various learning opportunity outside the class room. They should submit the journal after the event is over to assigned faculty from the committee in following format.

- Name of the event
- Location
- Time
- Faculty Responsible
- Task Assigned
- Learning Outcome
- Suggestions

All the assignments should be duly authorized by the faculty responsible for the event.

Student services will be monitored & evaluated by the committee comprising of Program leader & faculty (as approved by HOI) and the marks will be allotted based on the performance, attitude, learning and utilization of knowledge in practical field.

FOOD PRODUCTION OPERATIONS-I

Course Code: HMC2301 **Credit Units: 02**

Course Objective:
After completion of this course the students will have the basic concepts of –
- Standard Recipe, Menu planning
- Classification & cooking of Egg, Meat, Poultry / Game, Fish
- Indian Gravies & Masalas
- Accompaniments & Garnish
- Production of Cakes, role of different ingredients used

Module I:Standard Recipe
- Introduction & Types of standard Recipes
- Method of writing & Uses

Module II :Menu planning
- Introduction
- Types of menus
- Factor effecting menu planning

Module III:Egg Cookery
- Structure, Composition, Varieties, Storage
- Nutritional Aspects
- Preparation

Module IV :Meat Cookery
- Composition, Selection, Grading of Mutton, Lamb, Pork, Beef, Veal
- Cuts of Different Meats, Cooking Times, & Handling
- Nutritional and Storage Points

Module V :Poultry / Game Cookery
- Types/Classification
- Food Value, Storage & Nutritional Value

Module VI:Fish Cookery
- Classification, Source
- Storage, Food Value Preservation

Module VII:Basic Gravies
- Basic ingredients used in gravies
- Types of gravies
- Uses with examples

Module VIII:Masalas
- Blending of spices
- Different Masalas used in Indian cookery
- Wet Masala
    - Dry Masala

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Composition of different Masalas
- Verities of Masalasavailable in regional areas
- Special Masala blends

Module IX : Accompaniments&Garnish

Module X :Cakes (Bakery & Patisserie)

- Ingredients Used in Cake-Making & Their Functions
- Type of Methods
- Cake Balancing Formulas, Faults & Remedies
- High Ratio Cakes, Pound Cakes - Definitions, Formulas
- Cake Decorations , Icings, Types of Icing, Other Decorative Items

Examination Scheme:

FOOD & BEVERAGE SERVICE OPERATIONS-I

Course Code: HMC2302 **Credit Units: 02**

Course Objective:
After completion of this course the students will have the clear concepts of –
- Spirits & their production methods
- Calculation of strength of Spirit
- Types of Spirits
- Liqueurs & Bitters
- Cigars & Cigarettes

Module I :Spirits
- 1.1 Introduction & Types
- 1.2 Measuring Strength of Spirit
- 1.3 Styles of Production
- 1.4 Whisky
- 1.5 Brandy
- 1.6 Rum
- 1.7 Gin
- 1.8 Vodka
- 1.9 Tequila
- 1.10 Other Spirits (Pernod, Marc, Grappa Etc.)

Module II :Liqueurs & Bitters
- 2.1 Types
- 2.2 Production
- 2.3 Bases & Brands

Module III :Cigars & Cigarettes
- 3.1 Manufacturing
- 3.2 Care & Storing
- 3.3 Types, Brands

FRONT OFFICE OPERATION-II

Course Code: HMC2303 **Credit Units: 02**

Course Objective:

After completion of this course the students will have clear concept on –

- Front office Communication
- Bell Desk Service
- Guest Services

Module I : Bell Desk Service

1.1 Bell Desk Layout, Equipment
1.2 Staff Organisation, Duty Rotas & Work Schedule
1.3 Luggage Handling Procedures
1.4 Left Luggage Procedures
1.5 Other Functions of Bell Desk

Module II :Front office Communication

2.1 Importance of inter-Departmental Communication
2.2 Types & Methods of Communication

Module III :Guest Services

3.1 Handling Guest Requests
3.2 Handling Guest Complaints
3.3 Mail Handling Procedures
  3.3.1 Importance of Handling Mail without Delay, Sorting of Mail
  3.3.2 Categories of Guest Mail :- Resident Guest, Departed Guest & Guest Still to Arrive
  3.3.3 Special Handling of Registered Mail and Parcels
3.4 Message Handling Procedure
  3.4.1 Importance, Procedure, Method of Receiving and Transmitting Messages for Guest, Location Form, Paging Procedure

HOUSE KEEPING OPERATION-II

Course Code: HMC2304 **Credit Units: 02**

Course Objective:

At the end of the semester the students will have a thorough knowledge of-

- Fibres & Fabrics, Methods of Weaving, Linen
- Linen Room
- Uniforms & Uniform Room
- Sewing Room.

Module I : Fibres & Fabrics

Definition of Fibre

Classification of Fibre - The Origin, Characteristics & Usage in the Hotel

Module II :Weaving

Stages

Terms Used - Weft, Warp, Selvedge, Thread Count

Classification of Weaves - Plain -Basket, Twill, Damask, Satin, Figured, Bird Eye, Herring Bone, Dobby, Jacquard, Pile (Cut & Uncut)

Fabric Commonly Used - Flannel, Parcale, Calico, Cambrioc, Candlewick, Denim, Rayon, Velvet,

Finishes -Sizing, Degumming, Weighting, Boiling off, Scouring, Singeing, Calendering, Decatizing, Shearing, Brushing, Floacking, Sanforisation, Mercerization, Pleating / Fluting, Napping, Bleaching, Dyeing, Printing (Roller & Screen)

Module III :Linen

Classification of Linen

Items Classified As Bed and Bath Linen, Their Sizes

Items Classified As Table Linen, Their Sizes

Materials Used For Making Fabric & Their Classification

Selection Criteria for the Linen Items (Bed Sheets Pillowcases, Towels and Bath Mats, Table Cloths, Serviettes)

Selection Criteria & Calculating Material Required for Soft Furnishings (Curtains, Bedspreads, Upholstery & Cushions)

Module IV :Linen Room

Activities of Linen Room

Location, Equipment & Layout of a Linen Room (Basic Rules)

Purchase of Linen / Linen Hire / Quality & Quantity

Storage & inspection

Issuing of Linen to Floors & Departments (Procedure & Records)

Dispatch & Delivery from Laundry (Procedure & Records)

Stock Taking - Procedure & Records

Condemned Linen & Cut-Down-Procedure and Records

Marking & Monogramming

Module V :Uniforms & Uniform Room

Purpose of Uniforms

Number of Sets, Issuing Procedure & Exchange of Uniforms

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Designing A Uniform - Functional Aesthetic Considerations
Layout & Planning of the Uniform Room (Basic Considerations)

Module VI :Sewing Room

Equipments in a sewing room
Functions carried out in a sewing room

FOOD PRODUCTION OPERATIONS-II

Course Code: HMC2401 **Credit Units: 02**

Course Objective:

At the end of the semester the students will develop a clear concept on –

- Quantity Food Production
- Menu Planning
- Regional Indian Cuisine
- Frozen Desserts
- Sugar Cookery
- Chocolate Confectionary

Module I: Quantity Food Production- Equipment

Equipment required for mass/volume feeding
Heat and cold generating equipment
Care and maintenance of these equipments
Modern development in equipment manufacture

Module II: Menu Planning

Basic principles of menu planning – recapitulation
Points to consider in menu planning for various volume feeding outlets such as Industrial, Institutional, Mobile Catering Units
Planning menus for;

1. School/college students
2. Industrial workers
3. Hospitals
4. Outdoor parties
5. Theme dinners
6. Transport facilities, cruise lines, airlines, railway

Nutrition factors for the above

Module III: Indenting

Principles of indenting for volume feeding
Portion sizes of various items for different types of volume feeding
Modifying recipes for indenting for large scale catering
Practical difficulties while indenting for volume feeding

Module IV: Planning

Principles of planning for quantity food production with regard to

- Space allocation
- Equipment selection
- Staffing

Module V: Volume Feeding

Institutional and Industrial Catering

- Types of Institutional & Industrial Catering
- Problems associated with this type of catering
- Scope of development and growth

Hospital Catering

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Highlights of hospital catering for patients, staff, visitors
- Diet menus and nutritional requirements

Off Premises Catering

- Reasons for growth and development
- Menu planning and theme parties
- Concept of a Central Production Unit
- Problems associated with off-premises catering

Mobile Catering

- Characteristics of Rail, Airline (Flight Kitchen) and Sea Catering.
- Branches of Mobile Catering

Quantity Purchase & Storage

- Introduction of purchasing
- Purchasing system
- Purchasing specifications
- Purchasing techniques
- Storage

Module VI: Regional Indian Cuisine

Introduction to Regional Indian Cuisine
Heritage of Indian Cuisine
Cuisine and its highlights of different states/region/ communities to be discussed under:

- Geographic location
- Seasonal availability
- Special equipment
- Staple diets
- Specialty cuisine for festivals and special occasions

States - Andhra Pradesh, Bengal, Goa, Gujarat, Karnataka, Kashmir, Kerala, Madhya Pradesh, Maharashtra, North-Eastern States, Punjab, Rajasthan, Tamil Nadu and Uttar Pradesh/Uttranchal

Communities- Parsee, Chettinad, Hyderabadi, Lucknowi (Avadhi), Malabari / Syrian, Christian and Bohri

Discussions- Indian Breads, Indian Sweets, Indian Snacks.

Patisserie

Module VII : Frozen Desserts : ingredients; Types

Sherbets,
Ice-creams

Module VIII :Sugar Cookery

Manufacturing, Syrups, Types, Stages of Cooking With Temperatures

Module IX :Chocolate Confectionary

Origin of Chocolate, Manufacturing, Tempering, Types, Usage

FRONT OFFICE MANAGEMENT-I

Course Code: HMC2403 **Credit Units: 02**

Course Objective:
At the end of the semester the students will develop a clear concept on –
- Checkout & Settlement
- Front office Accounting Systems
- Night Audit
- Hotel / Front office Security System
- Property Management Systems

Module I :Checkout & Settlement
- Procedures at Reception, Cash Section, Bell Desk
- Express Check-Out & Self Check-Out
- Reduction of Late Charges
- Effective Billing & Collection

Module II: Front office Accounting Systems
- Accounting Fundamentals
- Creation & Maintenance of Accounts
- Audits & internal Control
- Settlement of Accounts
- Cash Control
- Credit Control

Module III: Night Audit
- Night Audit Process
- Function of Night Auditor
- Night Audit Reports

Module IV: Hotel / Front office Security System
- Methods
- Equipment Used
- Card Key Control
- Emergency Procedures
- Management's Role in Security

Module V:Property Management Systems
- Reservation Management Software
- Room Management Software
- Guest Account Management Software
- General Management Software

HOUSEKEEPING MANAGEMENT-I

Course Code: HMC2404 **Credit Units: 02**

Course Objective:
At the end of the semester the students will develop a clear concept on –
- Laundry Operation
- Contract Cleaning
- Flower Arrangement

Module I : Laundry Operation
- Duties & Responsibilities of Laundry Staff (Laundry Manager and Shift-In-Leader, Dry Cleaning, Supervisor, Spotter cum Presser, Laundry Clerk, Attendants Valet Runner, Laundry)
- Importance and Principles of Laundry Operations
- Flow Process of industrial Laundering [Collection, Transportation Arrivals, Sorting, Weighing, Loading, Washing, Rinsing, Starching, Hydro-Extraction, Drying, Unloading, Tumbling, Finishing (Calender / Steam Press) Folding, & Storing Transfer & Use]
- Stages in Wash Cycle (Flush-Suds-Bleach Rinse-Sour & Soft-Extract, Break & Soaking)
- Equipment, Layout & Planning & Laundry (Basic Rules)
- Role of Laundry Agents
- Classification of Laundry Agents (Synthetic, Detergent, Built Soap Detergents, Enzyme Action-Detergents, Explain Briefly)
- Stain Removal

Module II :Contract Cleaning
- Types of Contract Cleaning
- Methods of Pricing of Contract Cleaning
- Advantages and Disadvantages of Contract Cleaning
- Eco-Friendly Process

Module III :Flower Arrangement
- Purpose of Flower Arrangement, Placement & Level of Placement
- With Relevant Examples
- Equipment & Materials Required
- Conditioning of Plant Material
- Styles of Flower Arrangement (Western, Japanese, Free-Style & Abstract)
- Principle of Flower Arrangement (Design, Scale, Balance, Focal Point, Rhythm, Texture, Repetition, Unity & Harmony)

Examination Scheme:

FOOD PRODUCTION OPERATIONS LAB-II

Course Code: HMC2408 **Credit Units: 04**

Cookery

- To formulate different sets of menus from the following regions and to include more dishes from the respective regions. The practical class will be conducted preferably by demonstrative method.
  - Awadh
  - Bengal
  - Goa
  - Gujarat
  - Hyderabad
  - Kashmiri
  - Maharashtra
  - Punjabi
  - Rajasthan
  - South India (Tamil Nadu, Karnataka, Kerala).

Patisserie

- Preparation & Application of Cream, Filling & Custards & Their uses
- Sugar Products
- Chocolate Confectionery

Examination Scheme:

Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	5	5

End-Term: 70 Marks

Components	JE	VV	INDENT	LE
Weightage (%)	05	05	10	50

FOOD PRODUCTION TRAINING REPORT

Course Code: HMC2501 **Credit Units: 05**

Course Objective:

At the end of the industrial training the student would be able to;
(i) Explain the organizational structure of the department
(ii) Describe job description of various job titles, work schedules, opening & closing duties.
(iii) Explain various sections and their functions
(iv) Observe personal hygiene, kitchen hygiene and sanitation
(v) Identify forms/formats, records and registers maintained
(vi) Help in preparation of various dishes, garnish and service
(vii) Observe food production standards of finished products

On completion of the project the student will be required to submit the following:

Project File or Industrial workflow log book - The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include:
- A short account of the activities that were undertaken as part of the training;
- A statement about the extent to which the training has achieved its stated goals.
- A statement about the outcomes of the learning, evaluation and dissemination processes engaged in as part of the training;
- Any activities planned but not yet completed as part of the training, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Training Report
The report should be submitted in duplicate (2 copies) spiral bound and a CD and should contain the following components:

- **Title or Cover Page**

The title page should contain the following information: Department Name; Student's Name; Course; Year; Supervisor's Name.

- **Acknowledgements**

Acknowledgment to any advisory received in the course of work may be given.

- **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

- **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

- **Materials and Methods**

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

- **Suggestions**

In writing these section, emphasis should be given on what has been performed and achieved in the course of the work and any ideas/suggestions they feel will can be implemented, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis.

- **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

- **Appendices**

The Appendix contains material which is of interest to the reader ,and may include any forms, formats and any problem that have arisen that may be useful to document for future reference.

- **Performance Appraisal & Completion Certificate** duly signed and stamped

Examination Scheme:

Project Report:	50
Log book + Attendance + Appraisal	20
Presentation & Viva Voce:	30
Total:	**100**

ADVANCED FOOD PRODUCTION OPERATIONS-I

Course Code: HMC2601 **Credit Units: 02**

Course Objective:

At the end of the semester the students will develop a clear concept on –

- Larder and its activities
- Chaud Froid, Aspic & Jelly
- Charcuterie, Ham, Bacon & Gammon, Forcemeats, Galantines, Pates, Terrine, Mouse & Mousseline, Quenelles, Parfaits, Roulades, Brines, Cures & Marinades
- Non edible Displays

Module I: Larder

Layout & Equipment

- Introduction of Larder Work
- Definition
- Equipment found in the larder
- Layout of typical larder with equipment and various sections

Terms & Larder Control

- Common terms used in the Larder and Larder Control
- Essentials of Larder Control
- Importance of larder Control
- Devising Larder Control Systems
- Liasoning with Other Departments
- Yield Testing

Duties & Responsibilities of the Larder Chef

- Functions of the Larder
- Hierarchy of larder Staff
- Sections of the Larder
- Duties and responsibilities of larder Chef.

Module II: Charcuterie

- Introduction to charcuterie
- Sausage – Types & Varieties
- Casings – Types & Varieties
- Fillings – Types & Varieties
- Additives & Preservatives

Module III :Forcemeats

- Types of forcemeats
- Preparation of forcemeats
- Uses of forcemeats

Module IV :Brines, Cures & Marinades

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Types of Brines
- Preparation of Brines
- Methods of Curing
- Types of marinades
- Uses of Marinades
- Difference between Brines, Cures & Marinades

Module V :Ham, Bacon & Gammon

- Cuts of Ham, Bacon & Gammon
- Differences between Ham, Bacon & Gammon
- Processing of Ham & Bacon
- Green Bacon
- Uses of the different cuts

Module VI :Galantines

- Making of Galantines
- Types of Galantine
- Ballotines

Module VII: Pate& Terrine

- Types of Pate
- Pate de foie gras
- Making of Pate
- Commercial pate and Pate Maison
- Truffle – sources, cultivation and uses of types of truffle

Module VIII: Mouse & Mousseline

- Types of mousse
- Preparation of mousse
- Preparation of mousseline
- Difference between mousse and mousseline

Module IX : Chaud Froid

- Meaning of chaud froid
- Making of chaud froid & precautions
- Types of chaud froid
- Uses of chaud froid

Module X :Aspic & Jelly

- Definition of aspic and jelly
- Difference between the two
- Making of aspic and Jelly
- Uses of aspic and Jelly

Module XI:Quenelles, Parfaits, Roulades

- Preparation of Quenelles, Parfaits and roulades

Module XII :Non edible Displays

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Ice carvings
- Tallow sculpture
- Fruit & vegetable displays
- Salt dough
- Pastillage
- Jelly Logo
- Thermocol work.

FRONT OFFICE MANAGEMENT-II

Course Code: HMC2603 **Credit Units: 02**

Course Objective:
At the end of the semester the students will develop a clear concept on –
- Establishing Room Rates
- Forecasting Room Availability
- Budgeting for Operations
- Evaluating Front office Operations

Module I :Establishing Room Rates
- Market Condition Approach
- Rule-of-Thumb Approach
- Hubbart Formula

Module II :Forecasting Room Availability
- Forecasting Data
- Percentage of No-Shows
- Percentage of Walk-Ins
- Percentage of Over-stays
- Percentage of Under-stays
- ARR (Average Room Rate)
- RevPAR (Revenue Per Available Room)
- Forecast Formula
- Room Count Considerations

Module III :Budgeting for Operations
- Forecasting Rooms Revenue
- Estimating Expenses

Module IV :Evaluating Front office Operations
- Daily Operations Report
- Occupancy Ratios
- Rooms Revenue Analysis
- Operating Ratios
- Rooms Division income Statement & Budget Reports

ADVANCED FOOD PRODUCTION OPERATIONS LAB-I

Course Code: HMC2608 **Credit Units: 04**

Course Objective:
At the end of the semester students would be able to-
- learn about the technique of advance skill in food production
- develop concept of International cuisine

Course Contents:

Module I: Three course menus to be formulated featuring International Cuisines
- French.
- Oriental (Chinese and Thai)
- Italian
- Scandinavian
- British
- Spanish
- Demonstration
  - German Greece, Mexican, Mediterranean and Lebanese.

Module II: Demonstration of- Charcuterie
- Galantines
- Pate
- Terrines
- Mousselines

Module III: Bakery & Patisserie Practical-
- Decorated Cakes
- Gateaux
- International Breads
- Sorbets, Parfaits
- Hot / Cold Desserts

Examination Scheme:

Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	5	5

End-Term: 70 Marks

Components	JE	VV	INDENT	LE
Weightage (%)	05	05	10	50

Abbreviation: JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce

ADVANCED FOOD & BEVERAGE SERVICE OPERATIONS LAB-I

Course Code: HMC2609 **Credit Units: 02**

Course Objective:
At the end of the semester students will be able to-
- Prepare and give presentation on case studies on planning of F&B outlets
- Plan and supervise service of banquet, buffet, cocktails, gueridon service and setup bar for parties.

Course Contents:
Module I: Case Study on planning of
- Special Restaurant
- Room Service
- Coffee Shop
- Presentation.

Module II
- Case Study on Planning of Manpower of F&B department:-
- Presentation.

Module III
- Supervision of F&B Service in Training Restaurant.

Module IV
- Case Study of Planning Formal & Informal Banquet function including space requirement, Menu Planning.

Module V
- Setting up of various types of Buffet (Design, Layout).

Module VI
- Demonstration and Practice of Guerdon Service.

Module VII
- Case Study on setting up of Bar for parties.

Module VIII
- Demonstration and Practice of Making Cocktails.

ADVANCED FOOD PRODUCTION-II

Course Code: HMC2701 **Credit Units: 02**

Course Objective:
At the end of the semester the students will develop clear concept on -

- Modern Trend in Food Production
- Rechauffé Cookery
- Kitchen Planning, Layout and Design
- Quality Control & Standardization of Recipes
- Freezing Techniques
- Food Cost

Module – I :Modern Trend in Food Production Concept

- Frozen Foods
- Types
- Advantages & Disadvantages
- Handling Frozen Foods
- Defrosting Techniques

Module – II : Rechauffé Cookery

- Changes in Food Items
- Optimum Utilization

Module – III :Kitchen Planning, Layout and Design

- Principles of kitchen layout and design,
- Areas of various kitchens with recommended dimension,
- Factors that affect kitchen design,
- Placement of equipments,Flow of work,
- Space allocation,
- Layout of commercial kitchen (types, drawing a layout of a Commercial kitchen),
- Central Kitchen, Satellite Kitchen
- Planning of various supporting services (pot wash, wet grinding, chef room, larder, store and other staff facilities)

Module – IV :Quality Control & Standardization of Recipes

- Raw Materials
- Finished Goods
- Structure of Recipe

Module – V :Indenting

- Concept of indenting\
- Problems Related to indenting
- Storage System

Module – VI :Purchasing

- Receiving
    - Ordering

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

ADVANCED FOOD & BEVERAGE SERVICE-II

Course Code: HMC2702 **Credit Units: 02**

Course Objective:

At the end of the semester the students will develop clear concept on -

- Cycles of Control
- Food Cost Control
- Budgets & Budgetary Control
- Liquor Control

Module – I :Cycles of Control

3.1 Purchasing
3.2 Receiving
3.3 Storing
3.4 Issuing
3.5 Preparation
3.6 Costing & Selling
3.7 Control

Module – II :Food Cost Control

4.1 Food Costing
4.2 Checks & Checking System
4.3 Standard Costing
4.4 Variance Analysis

Module – III :Budgets & Budgetary Control

5.1 Definition, Different Types of Budgeting
5.2 Different Steps of Preparing Different Budgets
5.3 Budgetary Control
5.4 Formats for Budgeting

Module – IV :Liquor Control

6.1 Purchase Procedures
6.2 Assessment of Quality
6.3 Stock Control
6.4 Beverage Sales Control

ADVANCED FRONT OFFICE MANAGEMENT

Course Code: HMC2703 **Credit Units: 02**

Course Objective:
At the end of the semester the students will develop clear concept on -

- Yield Management
- Human Relations Management

Module – I :Yield Management

- Concept of Yield Management
- Capacity Management
- Discount Allocation

Module – II :Measuring Yield

- Potential Average SGL / DBL Rate
- Multiple Occupancy Percentage
- Rate Spread
- Potential Average Rate
- Room Rate Achievement Factor
- Yield Statistic
- Equivalent Occupancy
- Required Non-Room Revenue Per Guest

Module – III :Elements of Yield Management

- Group Room Sales
- Transient Room Sales
- Food & Beverage Activity
- Special Events
- Using Yield Management

Module – IV :Human Relations Management

ACCOMMODATION MANAGEMENT

Course Code: HMC2704 **Credit Units: 02**

Course Objective:
At the end of the semester the students will develop clear concept on -

- Budgeting, Purchasing, Controls in Housekeeping Department
- Recruitment of Staff, Induction & Training of Hotel Housekeeping Staff
- Working Methods

Module – I :Budgeting

- Definition
- Capital & Operational Budget
- Advantages
- Preparation of a Budget
- Budgetary Control

Module – II :Purchasing

- Department Requirements
- Methods of Purchasing

Module – III :Controls in Housekeeping Department

- Purpose
- Expenses
- Functioning
- Forms

Module – IV :Recruitment of Staff

- Job Specifications & Job Descriptions
- Duty Rotas,
- Manual for Standard Housekeeping Procedures of Commercial Establishments

Module – V :Induction & Training of Hotel Housekeeping Staff

Module – VI :Working Methods

- Optimum Time Requirement
- Planning of Work Methods

FACILITY MANAGEMENT, PLANNING & DESIGN

Course Code: HMC2705 **Credit Units: 01**

Course Objective:

At the end of the semester the students will be able to-

- Explain & understand hotel design,project management, architectural aspects aspects of facility planning,kitchen stewarding layout &design and methods of energy conservation.,.

Course Contents:

Module I: Hotel Design

Design Consideration, Attractive Appearance, Efficient Plan, Good Location, Suitable Material, Good Workmanship, Sound financing, Competent Management

Module II : Project Management

Introduction of Network analysis, Basic rules and procedures for Network analysis, C.P.M. and PERT, Comparison of CPM and PERT, Classroom exercises, Network crashing determining crash cost, normal cost.

Module III : Facilities Planning

The Systematic Layout Planning Pattern (SLP) for hotel,Planning Consideration,Flow Process and Flow Diagram Procedure for determining space considering ,the guiding factors for the guest room / public facilities, support facilities and services, hotel administration,

Module IV : Architectural Consideration

Difference between carpet area, plinth area and super built area, their relationships, reading of blueprint (plumbing, electrical, AC, ventilation, FSI, FAR, public areas),Approximate cost of construction estimation Approximate operating areas in budget type / 5 star type hotel / guest room,Approximate requirement and estimation of water / electrical load gas, ventilation.

Module V : Kitchen Stewarding Layout and Design

Importance of kitchen stewarding, Kitchen stewarding department layout and design, Equipment found in kitchen stewarding department

Module VI: Stores – Layout and Design

Stores layout and planning (dry, cold and bar), Various equipment of the stores work flow in stores

Module VII : Car Parking

Calculation of car park area for different types of hotels

Module VIII : Energy Conservation

Necessity for energy conservation, Methods of conserving energy in different area of operation of a hotel, Developing and implementing energy conservation program for a hotel

ENTREPRENEURSHIP DEVELOPMENT

Course Code: HMC2708 **Credit Units: 01**

Course Objective:

At the end of semester students will be able to-

- Acquire be self-employed and inculcate a habit of self-earning and maintain a dignified life
- Plan a path for hospitality students to make them successful entrepreneurs in their life and contribute to society
- To understand basic knowledge in the field of entrepreneurship development and give them basic exposure of Govt. policies and assistance
- Describes the roles that new venture creation plays in the economy, defines entrepreneurship and show how three factors – individuals, environments and organizations comes through to create the entrepreneurship event
- Impart the knowledge of the resource based framework i.e. Financial, physical, technological, human and organizational
- Exposed get with franchising opportunity and discuss what elements make a business concepts a legitimate franchise opportunity
- Acquire an effective leadership, quality and effective decision-making.

Course Contents:

Module I: Entrepreneurship Skills

Personality attribute of an entrepreneurs

- Self control-value attitude, Socio-culture factors

Unique characters of the hospitality industry

- Human psychology, Inter-personal relationship, Team building, Customer orientation

Positive entrepreneurship behaviour

- Overcoming external constrains, Solving internal problems

Module II: Identification of business opportunities in the hospitality industry

Demand / Market Analysis, Present and future competition, Government policy regarding small Enterprises

Module III: Organization of small enterprises - Form of organization

Sole ownership, Partnership, Private Ltd. Company, Public Ltd. Company, Manpower requirement

Module IV: Incentives and Assistance-

From central government, From State Government, From Financial Institutions

Module V: Small Enterprises Risk Analysis

Motivational factors, Developing Achievement Orientation, Strength and weakness of Independent Business, Feasibility and viability

Module VI: Establishment of an Enterprise

Registration of business, Licenses and Permits, Financial resources ,Organizing material, human and technical resource, Launching the enterprises, Formulating and implanting business strategies

EVENT MANAGEMENT

Course Code: HMC2709 **Credit Units: 01**

Course Objective:
At the end of the semester the students will be able to Explain & understand the concept of Event Management, its Design & Feasibility, Marketing of Event, Financial Management, Risk Management, Planning, Operations & Logistics, Control& Evaluation

Module I :Introduction to Event Management
- Size of Events
- Types of Events
- The Event Team
- Code of Ethics

Module II :Concept and Design
- Developing The Concept
- Analysing The Concept
- Designing The Event
- Logistics of The Concept

Module III :Feasibility
- Keys to Success
- The SWOT Analysis

Module IV :Legal Compliance
- Relevant Legislation
- Official Bodies Involved
- Contracts

Module V :Marketing of Event
- Nature of Event Marketing
- Process of Event Marketing
- The Marketing Mix
- Sponsorship

Module VI :Promotion
- Image / Branding
- Advertising
- Publicity
- Public Relations

Module VII :Financial Management
- The Budget
- Break-Even Point & Cash Flow Analysis
- Profit & Loss Statement
- Balance Sheet
- Financial Control Systems

Prof. (Dr.) Anil Kumar

Module VIII :Risk Management

- Process of Risk Management
- Incident Reporting
- Emergency Response Plans
- Standards for Risk Management

Module IX :Planning

- Establish The Aims of The Event & Objectives
- Prepare an Event Proposal
- Planning Tools

Module X :Protocol

- Order of Precedence; Titles; Styles of Address; Dress Codes
- Protocol for Speakers
- Seating Plans
- Religious & Cultural Protocol
- Rules of Flag Flying

Module XI :Staging The Event

- Choosing The Event Site
- Developing The Theme
- Providing Services
- Managing The Environment

Module XII :Staffing

- Recruitment & Selection; Rosters
- Training; Briefing Staff
- Managing Volunteers

Module XIII :Operations & Logistics

- Logistics
- Policies
- Procedures
- Performance Standards
- Functional Areas

Module XIV :Crowd Management & Evacuation

- The Crowd Management Plan
- Emergency Planning
- Implementing Emergency Procedures

Module XV :Control & Evaluation

- Monitoring & Control Systems
- Operational Monitoring & Control
- Evaluation

RESEARCH METHODOLOGY

Course Code: HMC2803 **Credit Units: 02**

Course Objective:
Research methodology will be taught in the theory class to prepare students how to approach the subject of research project in the semester. To deal with surging information data regarding the various aspects of tourism industry, one should have a working efficiency with research and statistical techniques. The techniques may be applied in collecting, organizing, analyzing and interpreting data for decision-making. These may also be applied for formulating and testing research hypothesis. The course has been designed to equip the students with latest and necessary field techniques and to build a necessary statistical acumen among them. Students will master the skill for-

- Writing different types of research proposals
- Constructing the relevant tools of research
- Conduct a research project using appropriate qualitative and quantitative techniques
- Write a research report
- Evaluate a research report
- Give presentation of report supported by latest aids.

Course Contents:

Module I: Research Methodology
Meaning of research,Need and importance of research,Types of research,Criteria of good research

Module III: Data collection, analysis and interpretation (Sample designing)
Types & Sources of Data,Techniques of data collection; Correlation and regression analysis of two variables only.Hypothesis testingTest of significance,Chi-square analysis,Reports

Module IV: Preparation of research proposals-
Selection and formulation of research problem,Operationalization of concepts and constructs,Review of related literature,Aims and objectives,Hypothesis, method, sample and tools.

Module V: Evaluation of research report
Research Report Format,Presentation of Report

Examination Scheme:

Components	V	A	S	CT	EE
Weightage (%)	05	05	05	15	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination; S-seminar

SPECIALIZATION COURSE (LAB)

Course Code: HMC2804 **Credit Units: 04**

Course Objective:

At the end of the semester the students will be develop competency in specialized area selected by him/her.

FOOD PRODUCTION

- **Module I**
  Theme Cuisine

- **Module II**
  Planning and implementing strategies for Quantity Food Production

- **Module III**
  Fusion Cooking

- **Module IV**
  Display Cuisine

- **Module V**
  Designing & setting up Commercial Kitchen Area

F&B SERVICE

- **Module I: Case Study on planning of**
  Special Restaurant
  Room Service
  Coffee Shop
  Presentation.

- **Module II**
  Case Study on Planning of Manpower of F&B department:-
  Presentation.

- **Module III**
  Supervision of F&B Service in Training Restaurant.

- **Module IV**
  Case Study of Planning Formal & Informal Banquet function including space requirement, Menu Planning.

- **Module V**
  Setting up of various types of Buffet (Design, Layout).

- **Module VI**
  Demonstration and Practice of Guerdon Service.

- **Module VII**

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Case Study on setting up of Bar for parties.

- **Module VIII**
  Demonstration and Practice of Making Cocktails.

FRONT OFFICE

- **Module I**
  Role Play

- **Module II**
  Situation Handling

- **Module III**
  Work – Time Management

- **Module IV**
  Work Schedule Designing

HOUSEKEEPING

- **Module I:**
  First Aid
  First aid kit
  Dealing with emergency situation

- **Module II**
  Special Decorations

- **Module III**
  Layout of a guest room (Refurbishing & Redecoration)

- **Module IV**
  Team cleaning Management

- **Module V**
  Devising Training modules/standard operating procedure/Inspection check lists

GDPI SESSIONS

Course Code: HMC2805 **Credit Units: 03**

Course Objective:

These sessions would help the students to perform well in the campus interview at the final year stage.

1. **Pre-Preparation before GD/PI**
   - 1.1 Previous day
   - 1.2 Previous night
   - 1.3 Type of food
   - 1.4 Rest & sleep
   - 1.5 On GD/PI day
   - 1.6 Personal Hygiene
   - 1.7 Grooming
   - 1.8 Curriculum Vitae &Testimonials
   - 1.9 Sense of Time

2. Process of Evaluation during Group Discussion
   - 2.1 Skills assessed in a Group Discussion Session
     - 2.1.1 Leadership skills
     - 2.1.2 Communication skills
     - 2.1.3 Interpersonal skills
     - 2.1.4 Persuasive skills
     - 2.1.5 Problem solving skills
     - 2.1.6 Conceptualizing skills
   - 2.2 Rules to follow during the Group Discussion
   - 2.3 Points to remember during Group Discussion
   - 2.4 What to avoid during Group Discussion - Common Mistakes
   - 2.5 Preparations to be taken before appearing in a Group Discussion
     - 2.5.1 Get noticed - But for the right reasons
     - 2.5.2 Egotism Showing off
     - 2.5.3 Quality Vs Quantity

3. Types of Group Discussion GD topics
   - 3.1 Factual
   - 3.2 Abstract
   - 3.3 Argumentative/ Controversial topics
   - 3.4 Opinion based
   - 3.5 Current topics
   - 3.6 Case based topics

4. Steps on how to prepare for an interview?

5. What is an interview?

6. What's the purpose of an interview

7. What to do Before an Interview

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

RESEARCH PROJECT

Course Code: HMC2837 **Credit Units: 12**

Course Objective:

The purpose of research (Hospitality and Tourism based) is to seek answers to problems through the application of scientific methodology, which guarantees that the information is reliable and unbiased. This information is utilized to make conclusions and recommend solution. Some elementary factors need to be kept in mind while preparing a research and deciding the topic, these could be based on its relevance, feasibility, coverage, accuracy and research, objectivity and ethics.

To deal with surging information data regarding the various aspects of tourism industry, one should have a working efficiency with research and statistical techniques. The techniques may be applied in collecting, organizing, analyzing and interpreting data for decision-making. These may also be applied for formulating and testing research hypothesis. The course has been designed to equip the students with latest and necessary field techniques and to build a necessary statistical acumen among them. Students will master the skill for-

- Writing different types of research proposals and reports
- Constructing the relevant tools of research
- Conduct a research project using appropriate qualitative and quantitative techniques
- Do presentation with the help of tutorial aid
- Evaluate a research report.

The research topic should be assigned by the deputed subject faculty in the beginning of semester & should be approved by PL & HOI. Continuous monitoring and guidance should be provided to student at all the steps.

At the term end, the research project will be presented before a panel and evaluated by examiners (As nominated by HOI). The evaluation should be based on presentation, viva, report content & format & conclusion.

Examination Scheme:

Internal Assessment:

Abstract:	10
Draft:	15
Research Orientation:	10
Reading:	05

External Evaluation:

Objective:	05
Issue Profile:	10
Comprehensiveness	10
Relevance:	10
Presentation:	15
Viva:	10

INDIAN GEOGRAPHY OF TOURISM

Course Code: TRM2102 **Credit Units : 03**

Course Objective: Geography of Tourism includes the phenomena of tourism over the global space with 'spatial' attention on the place of origin, place of destination & routes through which the travel & tourism takes place. This course has been simplified with very few case studies & broad information about the continents, so the students can have knowledge of India.

Course Contents:

Module – I : India

- General Introduction, States & Capitals
- Physiographic Units
- Seasons and Climatic Regions & their Impacts on Tourism.
- Natural Vegetation & Wild Animals of India
- India: A Destination for all Reasons & Seasons.

Module – II : The Northern Mountains

- General Introduction of the Himalayas & other Ranges
- Importance of the Himalayas & other Ranges for Religious Tourism
- Importance of the Himalayas & other Ranges for Hill Station & Adventure Tourism.

➢ **Case studies**

- Sri Nagar, Shimla, Nainital, Darjeeling & Gangtok.

Module – III : The Deserts & Central Plains

- General Introduction of Deserts & Central Plains.
- Their Importance for Cultural, Religious & Adventure Tourism.

➢ **Case studies**

- Amritsar, Jaipur, Delhi, Lucknow, Kolkata.

Module – IV : The Peninsula

- General Features of Indian Peninsula with their Tourism Significance.

➢ **Case studies**

- Bhopal, Khajuraho, Hyderabad, Banglore, Ooty

Module – V : The Coastal Plains and Islands

- General Features of Coastal Regions, their Importance for Religious, Cultural & Beach Tourism.

➢ **Case Studies**

- Mumbai, Goa, Cochin, Chennai, Andaman & Nicobar Islands.

APPLICATION OF COMPUTERS

Course Code: TRM2106 **Credit Units: 01**

Course Objective:
The basic objective of the course is to introduce the students to the world of computers and computer technology. The students will be introducedto the basic concept of operating system, word processing, database, presentation.

Course Contents:
Module - I: Computer Fundamentals
Elements of a Computer system
Characteristic of Computers
Classification of Computers
Limitations
Hardware features and uses
Generations of Computer
Primary and Secondary Storage Concepts
Data Entry Devices
Data Output Devices
Software Concepts
System Software
Application Software
Language Classification
Compilers and Interpreters

Module - II: Operating Systems/Environment
Introduction to Windows
GUI/Features
What are Window & Window 95 and above
Part of a Typical Window and their functions

Examination Scheme:

APPLICATION OF COMPUTERS LAB

Course Code: TRM2107 **Credit Units: 01**

Course Objective:
At the end of the semester the students would be able to-
- Create folders
- Shortcuts copy files & folders
- Deleting files and exploring windows etc.

Course Contents:

Module - I: Window Operations
Creating Folders, Creating Shortcuts, C
opying Files/Folders, Renaming Files/Folders, Deleting Files
Exploring Windows
Quick Menu

Module - II: MS Word
Creating a Document, Formatting Documents, Special Effects
Cut, Copy, Paste.
Table, Graphics.
Print Options.

FIELD WORK PROJECT-I

Course Code: TRM2108 **Credit Units: 03**

Course Objective: Students of Tourism need to go through the basics of practical service exposure in different Tourism & Hospitality outlets. To maximize this exposure students will be send for different Tourism services in all the major & minor areas of operation & management within & outside the campus.

Methodology:
Students should be sending for various learning opportunity outside the class room. They should submit the journal after the event is over to assigned faculty from the committee in following format.

- Name of the Event
- Location
- Time
- Faculty Responsible
- Task Assigned
- Learning Outcome
- Suggestions

All the assignments should be duly authorized by the faculty responsible for the event.

Student services will be monitored & evaluated by the committee comprising of Program leader & faculty (as approved by HOI) and the marks will be allotted based on the performance, attitude, learning and utilization of knowledge in practical field.

FUNDAMENTALS OF ACCOUNTING-I

Course Code: TRM2207 **Credit Units : 02**

Course Objective:

At the end of the semester the students will be able to-

- Understand basic concept of hospitality accounting system
- The meaning and need for accounting
- Distinguish between book keeping and accounting
- Record the transactions using rules of debit and credit
- Ascertain the correct bank balances
- To check the accuracy of accounting records.

Course Contents:

Module – I : Introduction to Accounting

Meaning & Definition, Types and Classification, Principles of Accounting, Systems of Accounting, Generally Accepted Accounting, Principles

Module – II : Primary Books (Journal)

Meaning and Definition, Format of Journal, Rules of Debit and Credit, Opening entry, simple and compound entries, Practical

Module – III : Subsidiary Books (Ledger)

Meaning and Uses, Formats, Posting, Practical

Module - IV: Subsidiary Books

Need and Use

Classification

- Purchase book
- Sales book
- Purchase returns
- Sales return
- Journal proper
- Practical

Module – V : Trial Balance

Meaning, Methods, Advantages, Limitations, Practical

Examination Scheme:

Components	V	H	CT	A	EE

FUNDAMENTALS OF ACCOUNTING-II

Course Code: TRM2307 **Credit Units : 02**

Course Objective:
At the end of the semester students will be able to
- The concept of double entry book keeping system
- Reconcile the bank statement
- Check the accuracy of accounts
- Prepare trial balance / P&L A/c and balance sheet concept
- The hospitality revenue and non revenue producing departmental accounting system
- The for casting of expense and revenue
- The concept of budgeting
- The hotel departmental accounting system.

Course Contents:

Module - I
Cash Book, Meaning, Advantages, Simple, Double and Three Column Petty Cash book with imprest system (simple and tabular forms), Practical

Module - II: Final Accounts
Meaning, Procedure for preparation of final accounts , Difference between Trading Accounts, Profit & Loss Accounts & Balance Sheet

Module - III: Adjustments
Closing Stock, Prepaid expenses, Outstanding expenses, Depreciation

Module - IV: Capital and Revenue Expenditure
Meaning, Definition of Capital and Revenue Expenditure,

Module V: Depreciation
Meaning of Depreciation, Need and Causes, Straight line method, Diminishing Balance method, Practical

Module VI: Ratio Analysis
Importance of Ratios
- Liquidity Ratios, Current ratio, Quick ratio, **Solvency Ratios,** Debt equity ratio, Interest coverage ratio

Activity Ratio, Capital turnover ratio, Stock turnover ratio, Debtors turnover ratio, **Profitability Ratios**
- Gross profit ratio, Net profit ratio.

CARGO MANAGEMENT

Course Code: TRM2402 **Credit Units : 03**

Course Objective: The objective of this subject is to provide the participants with a good knowledge of airfreight operations, services and management that can support them in various business functions and roles such as operations, customer service, account management and sales

Course Contents:

Module – I : Introduction to Air Cargo

- Aviation and Airline Terminology, IATA Areas, Country Currency, Airlines /Aircraft Layout , Different Types of Aircraft

Module – II : Aircraft Manufacturers

- Aircraft Manufacturers, ULD, International Air Routes, Airports Codes, Consortium, Hub & Spoke Process Flow

Module – III : General Process

- Advices, Booking , SLI, Labeling , Volume/ Weight Ratio, Shipment Planning , TACT, Air Cargo Rates and Charges, Cargo Operations, Cargo Operations Process, Customs Clearance

Module – IV : Air Freight

- Air Freight Forwarding: Air freight Exports and Imports, Special Cargoes , Consolidation

Module – V : Documentation

- Air Way Bill (AWB), Communication, Handling COD Shipments, POD, Conditions of Contract, Dangerous (DGR) or Hazardous Goods

Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

Suggested Readings:

- Air transport logistics by Simon Taylor (Hampton)
- Air cargo distributions: a management analysis of its economic and marketing benefits / [by] Paul ackson and William Brackenridge (Gower Press)
- Air freight: operations, marketing and economics / (by) Peter S. Smith (Faber)
- 4th Party Cyber Logistics for Air Cargo by Sung Chi-Chu (Boston : Kluwer Academic Publishers)
- Accelerated Logistics by Mark Wang (Santa Monica CA)
- Airports; some elements of designs and future development-John Walter wood
- Fundamental of air transport management by P.S.Senguttavan.
- Oxford ATLAS-OXFORD PUBLISHING

ITINERARY DESIGNING MANAGEMENT

Course Code: TRM2403 **Credit Units : 03**

Course Objective: To make students understand about different tour packages and itinerary.

Course Contents:

Module – I : Itinerary Planning

- Itinerary and its Importance
- Types of Itineraries and Component of Itinerary
- Factors to keep in Mind while Designing an Itinerary
- Type of Journey

Module – II : Itinerary for Inbound Tourist

- Itinerary on Buddhist Circuit, Itinerary on Puri-Bhubaneswar-Konark

Module – III : Itinerary for Inbound Tourist

- Itineraries for Inbound and Domestic Tourists:- Golden Triangle, Rajasthan Tour, Kerala Tour

Module – IV : Itinerary for Outbound Tourist

- Popular Outbound Itineraries of Singapore, Malaysia, Thailand , Europe Tour, Australia Tour

Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

Suggested Readings:

- Travel Agency and Tour Operation, Concepts and Principls - J.M.S. Negi
- Professional Travel Agency Management - Chunk, James, Dexter &Boberg
- The Business of Travel Agency Operations and Management - D.L. Foster
- Travel Agency Management-An Introductory Text, Anmol Publication New Delhi.
- Tourist Guide and Tour Operations, Kanishka Publication, New Delhi.

AIRLINE OPERATION MANAGEMENT

Course Code: TRM2404 **Credit Units : 03**

Course Objective: To make students familiarize with the travel modes and documents.

Course Contents:

Module – I : Management of Airport

- Airport Codes, Airline Codes, Phonetic Alphabet, Airport Lounges, How airports Work?, Baggage Handling, Airport Security

Module – II : Introduction to Journey and Tickets

- Types of Journeys (OW, CT, RT, OJ, RTW).
- Passenger Ticket: Different Coupons, Ticketing Instruction and Conjunction Tickets, Open Tickets, E-Tickets and Its Advantages
- Miscellaneous Charges Order (MCO) and Prepaid Ticket Advice (PTA),The Rounding off of Currencies
- Referring to Airline Time Table, TIM, OAG, PAT.

Module – III : Management of Airlines

- Types of Airlines, Airlines Personnel and Revenue Earning, Airport Management, Study of Aircraft Parts, The Aircraft Turnaround, The Control Tower, Airport Facilities and Special Passengers, Airport Access.

Module – IV : Airport Formalities

- Check in Facilities, Landing Facilities for Departing Passengers, In-Flight Services, Cabin Component, Audio and Video Projection Equipment, Emergency Equipment for Disembarkation, In-Flight Entertainment, Classes of Service with more Comfort.

Module – V : Case Study Discussions

- Jet Airways, Kingfisher, Indian Airlines
- British Airways, Fly Emirates, Singapore Airlines

Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

MANAGEMENT INFORMATION SYSTEM

Course Code: TRM2405 **Credit Units : 01**

Course Objective:
At the end of the semester the students will develop a clear concept on –
- Management Information System (MIS)
- Role of Hotel Information System
- Various interfaces used in Hospitality Industry

Module – I : Management Information System (MIS)
- Concepts, evaluation & meaning
- MIS Designs and functions
- Managing multi processor environments.
- MIS Security issues
- MIS performance evaluation

Module – II : Hotel Information System
- The Concept
- Software Modules
  - Reservation
  - Guest Accounting
  - Room Management
  - Point of Sales
  - General Management

Module – III : Computer Based Reservation System
- Global Distribution System
- Inter sell agencies
- Central Reservation Systems(CRS)
- Affiliate and Non Affiliate Systems
- Property Level Reservation Systems
  - Reservation Inquiry
  - Determination of Availability
  - Creation of Reservation Record
  - Maintenance of Reservation Records
- Generation of reports.
- New Developments Reservation through the Internet

Module – IV : Guest Accounting Module
- Types of Accounts
- Posting entries to Accounts
- Night audit routine
- Account settlement
- Generation of reports

Module – V : Property Management System Interfaces
- Point of sale Systems (POS)
- Cash Accounting Systems (CAS)
- CAS / PMS Advantages and concerns.
- Electronic Locking Systems.
- Energy Management Systems.
- Auxiliary Guest Services

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Guest Operated Devices in room Vending Systems
- Guest Information Systems

Module – VI : Point of Sale - Applications

- POS order - Entry units
- Key Boards and Monitors
- Touch Screen Terminals
- Immediate Character Recognition (ICR) Terminal.
- Wireless Terminals
- POSD Printers.
- Guest check Printers
- Receipt Printers
- Workstation Printers
- Consolidated reports

Module – VII : Accounting Applications

- Account Receivable Module
- Account Payable Module
- Payroll Module
- Inventory Module
- Purchasing Module
- Financial Reporting Module

Module – VIII : Selecting and Implementing Computer Systems

- Analyzing Current Information Needs
- Collection Information of Computer Systems
- Establishing System Requirements
- Proposals from Vendors
- Contract Negotiations
- Installation Factors

Examination Scheme:

Components	**V**	**H**	**CT**	**A**	**EE**

ECONOMICS OF TOURISM

Course Code: TRM2407 **Credit Units : 01**

Course Objective:
At the end of the semester students would be able to:-
It intends to help the students in understanding the nature of Indian Economy in general & economic planning for tourism & hospitality in general.
It will further help them to understand the basic mechanism of pricing of products in different sector of economy with a special focus on product formulation, packaging & pricing of tourist & hospitality product.

Course Contents:

Module - I
- Meaning of Economics

Module - II
- Relevance of Economics in Hospitality and Tourism Industry

Module - III
- Meaning of Demand

Module - IV
- Demand Curve Analysis

Module V
- Factors Affecting Demand

Module VI
- Concept of inflation and types of inflation

Module VII
- Demand and methods of Forecasting

Module VIII
- GDP (Gross Domestic Product) & GNP (Gross National Product)

Module - IX
- Fiscal Policy and its Feature and Mechanism

Module X
- Monetary Policy and its functions

Module XI
- Economic Growth and Economic Development, Growth Patterns of Indian Economy

Module XII
- Market Structure and Hospitality and Tourism Industry

Module XIII
- A small capsule on WTO and its implications on Hospitality and Tourism Industry has also been included.

Syllabus - Fifth Semester

INDUSTRIAL TRAINING PROJECT & PRACTICUM

Course Code: TRM2535 **Credit Units: 20**

Course Objective:
At the end of the industrial training the student would be able to:
(i) understand and explain the organization structure of a Travel Agency / Tour Operator
(ii) prepare job descriptions of various job titles in the organisation
(iii) understand various procedures & functions followed for:-
1. Reservations
2. Information
3. Booking
4. Ticketing
5. Bills and Cash
6. Guest Relations
7. Auditing

(iv) maintain various records & registers and understand their uses.

On completion of the project the student will be required to submit the following:
Project File or Industrial workflow log book - The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.
In general, the File should be comprehensive and include:
- A short account of the activities that were undertaken as part of the training;
- A statement about the extent to which the training has achieved its stated goals.
- A statement about the outcomes of the learning, evaluation and dissemination processes engaged in as part of the training;
- Any activities planned but not yet completed as part of the training, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Training Report
The report should be submitted in duplicate (2 copies) spiral bound and a CD and should contain the following components:
- **Title or Cover Page**

The title page should contain the following information: Department Name; Student's Name; Course; Year; Supervisor's Name.
- **Acknowledgements**

Acknowledgment to any advisory received in the course of work may be given.

- **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

- **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

- **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- **Suggestions**

In writing these section, emphasis should be given on what has been performed and achieved in the course of the work and any ideas/suggestions they feel will can be implemented, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis.

- **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

- **Appendices**

The Appendix contains material which is of interest to the reader ,and may include any forms, formats and any problem that have arisen that may be useful to document for future reference.

- **Performance Appraisal & Completion Certificate** duly signed and stamped

Examination Scheme:

Appraisal Report:	50
Log book + Attendance + Appraisal	20
Presentation & Viva Voce:	30
Total:	**100**

SOCIOLOGY OF TOURISM

Course Code: TRM2604 **Credit Units : 03**

Course Objective: The paper looks into the sociological concepts like society, culture, social change etc. so that the student can easily grasp the social impacts of tourism. Similar other issues of concern form the basis of this paper.

Course Contents:

Module – I : Understanding Sociology

- Sociology: Definition, Nature and Scope
- Society: Definition and Different Types of Societies

Module – II : Sociological Approach to Tourism

- Sociological Factor in Tourist Motivation, Attitude and Perception
- Social Dimension of Host and Tourist Relationship
- Socio-Cultural Impacts of Tourism

Module – III : Tourism System and the Individual

- Socialization through Interaction and Exchange of Values, Norms, Social Laws and Usages
- Factors Influencing Individual's Role, Behavior, Attitudes and Experiences at the Destination

Module – IV : Tourism and Social Institutions

- Social Institutions and their Roles
- Factors Influencing the Roles and Status of Social Institutions
- Influence of Tourism on Social Institutions

Module – V : Tourism and Social Change

- Social Change: Definition and Theories of Social Change
- Factors Affecting Social Change
- Tourism as an Instrument of Social Change

Examination Scheme:

MANAGERIAL ACCOUNTING

Course Code: TRM2605 **Credit Units : 01**

Course Objective:

At the end of the semester the students would be able to-

- Understand the concept of managerial accounting
- Explain contents of income statement, balance sheet and departmental income statements and expense statement and solve practical problem
- Understand objectives, characteristics and implementations of internal control
- Distinguish between internal and statutory audit and views of internal audit

Course Contents:

Module – I : Managerial Accounting

- Meaning of managerial accounting
- Functions of managerial accounting
- Utility of managerial accounting

Module – II : Uniform System of Accounts for Hotels

- Introduction to Uniform system of accounts
- Contents of the Income Statement
- Practical Problems
- Contents of the Balance Sheet (under uniform system)
- Practical Problem
- Departmental Income Statements and Expense Statement (Schedules 1 to 16)
- Practical Problem

Module – III : Internal Control

- Definition and objectives of Internal Control
- Characteristics of Internal Control
- Implementation and Review of Internal Control

Module – IV : Internal Audit and Statutory Audit

- An introduction to Internal and Statutory Audit
- Distinction between Internal Audit and Statutory Audit
- Implementation and Review of Internal Audit

Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

HOSPITALITY & TOURISM MARKETING

Course Code: TRM2606 **Credit Units : 01**

Course Objective:
At the end of the semester the students will be able to understand the concept of –
- Marketing Hospitality Tourism Products
- Various tools of marketing
- Service Marketing Mix

Module – I : Introduction to Marketing
- Marketing Concepts
- Functions of Marketing
- Importance of Marketing
- Difference between Marketing and Selling
- Related Application of Concept in Hotel Service Industry

Module – II : Marketing Mix – 7P's of Marketing
- Product – Product Management, Development, Product Lifecycle and Branding
- Pricing – Factors Influencing Pricing, Methods of Price Fixation and Strategies
- Promotion – Promotion Mix and Tools,
- People – Encounters, Managing Tourism Experience Through People and Important
- Practices to Manage People
- Process – Elements, Managing Process, Developments in Service Processes in Tourism,
- Physical Evidence – Concept, Role & Components

Module – III : Market Segmentation and Targeting
- Concept of Market Segmentation
- Procedure and Importance of Market Segmentation
- Market Targeting Process
- Product Positioning

Module – IV : Marketing of Tourism & Hospitality Products
- The Tourism Destination
- Marketing Hotels
- Investment in Tourist Attractions
- Identifying Target Markets
- Classification of Visitor Segments
- Monitoring the Tourist Markets
- Organizing and Managing Tourism Marketing
- Marketing to Business and Leisure Travellers
- Marketing to of Hotels to Travel Agents

Module – V : Destination Marketing
- Country, Regions, Cities
- Events and Activities
- Leisure Activities
- Accommodation Marketing
- Marketing Local Foods

Prof. (Dr.) Anil Kumar

DMC INTEGRATED PROJECT

Course Code: TRM2632 **Credit Units: 12**

Course Objective:
To plan a Tourism Destination with varied facilities and attractions

Modus Operandi:

- **Formation of Team of 5 members**
  Team Designates are the following:
  - Project Head
  - Finance Head
  - HR Head
  - Marketing Head
  - Operations Head

  The planning process is shared by the team members according to their respective portfolio.

- **Presentation & Dissertation**
  The Team should present the Project Plan before the selected Board. Dissertation led by the Team Leader and supported by the rest of the team members.

- **Open to Question-Answer Session**
  The Team will be asked Questions on the Project planned by the Board which should be justified by relevant answers.

- **On completion of the project the student will be required to submit the following:**
  - Project Report
  - Presentation

Examination Scheme:

Project Plan:	50
Presentation	20
Viva Voce:	30
Total:	**100**

Syllabus – Seventh Semester

FACILITY MANAGEMENT PLANNING & DESIGN

Course Code: TRM2701 **Credit Units : 01**

Course Objective:

At the end of the semester the students will be able to-

- Explain the Procedures for Planning, Designing & Managing of Hospitality project, its architectural aspects of facility planning, layout &design, and also develop concepts &methods of energy conservation.,.

Course Contents:

Module – I : Design Hospitality Unit

Design Consideration, Attractive Appearance, Efficient Plan, Good Location, Suitable Material, Good Workmanship, Sound financing, Competent Management

Module – II : Project Management

Introduction of Network analysis, Basic rules and procedures for Network analysis, C.P.M. and PERT, Comparison of CPM and PERT, Classroom exercises, Network crashing determining crash cost, normal cost.

Module – III : Facilities Planning

The Systematic Layout Planning Pattern (SLP) for hotel, Planning Consideration, Flow Process and Flow Diagram Procedure for determining space considering ,the guiding factors for the guest room / public facilities, support facilities and services, administration,

Module – IV : Architectural Consideration

Difference between carpet area, plinth area and super built area, their relationships, reading of blueprint (plumbing, electrical, AC, ventilation, FSI, FAR, public areas), Approximate cost of construction estimation Approximate operating areas in various types budget wise, Approximate requirement and estimation of water / electrical load gas, ventilation.

Module – V : Operational Area requirements

Layout and design, Furniture, Equipment, Installation &functioning

Module – VII : Car Parking

Calculation of car park area for different types of hotels

Module – VIII : Energy Conservation

Necessity for energy conservation, Methods of conserving energy in different area of operation of a hotel, Developing and implementing energy conservation program for a hotel

Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

Suggested Readings:

- Systematic Layout Planning by Richard Muther, Cahners Books Division of Sahners Publishing Company Inc. 9 Franklin Street, USA
- Food Service Planning- Layout Equipment by Lendal H Kotschevar&Margrat E Terrell
- Management Operations & Research by N. Satyanarayan&Latika Raman, Himalaya Publishing House.
- Hospitality Facilities Management and Design by David M Stipanuk

TOURISM & ENVIRONMENTAL LAW

Course Code: TRM2702 **Credit Units : 03**

Module – I : Understanding Law in Tourism Industry

Company - meaning, definition, types, formation and incorporation under companies act, 1956.
Contract act - meaning and essentials of a valid contract, breach and termination of contract.

Module – II : Hotel & Accommodation

Laws relating to Accommodation

Module – III : Travel Agents & Tour Operators

Tourism Packages & Legal Issues
Consumer Protection Act - meaning and its relevance in travel and tourism business.
MRTPC - applicability and significance in tourism and travel related business.
Travel Insurance and consumer protection act, International consumer protection acts in tourism

Module – IV : Common Carriers – Air, Land & Sea

Air Law- Law and regulations related to airlines and airways, Laws relating to passenger safety, convenience and compensation during air travel, Baggage concessions for tourist, Compensation for lost and damaged baggage. Insurance for tourists and their baggage. DGCA formalities for business and recreational flying in India
Laws related to surface transport.
Law of Sea - concept, bill of lading and foreign travels

Module – V : Tourist Documents

Laws and legislation relating to tourist entry, stay and departure.
Passport Act & Visa Extension.
Procedure and requirement for procuring various travel documents (passport, visa, Health Certificates & Insurance) with relation to inbound and outbound tourists.
Laws relating to currency exchange, FEMA.

Module – VI : Foreigners Act

Foreigners Act 1946. Special permits to restricted areas for foreign tourist in India, restricted area in India for foreign tourists and related authorities at these places to obtain permits, permits related to various monasteries and wild life areas and their procedure.

Module – VII : Adventure Tour Operation

Law designed for Adventure Tour operation, special permits for Rafting, Paragliding, Heli-Skiing & Angling. Peak booking formalities, IMF rules for mountain expeditions, cancellation of permits and bookings.

Module – VIII : Wild Life, Heritage and Environment

Wild Life Protection Act - Laws related to Environment and Wild Life.
Antiquities & Art Treasures Act – Laws related to Antiquities & Art Treasures
The Ancient Monument & Archaeological Sites & Remains Act
Laws relating to protection, presentation and conservation of heritage and environment.
Environment Protection Act. Air, Water & Noise Pollution Act.

MICE MANAGEMENT

Course Code: TRM2703 **Credit Units : 02**

Course Objective:
At the end of the semester the students will be able to Explain & understand the concept of Event Management, its Design & Feasibility, Marketing of Event, Financial Management, Risk Management, Planning, Operations & Logistics, Control& Evaluation

Module - I : Introduction to Concept of MICE
- Types of Events- meetings, incentives, conference/conventions, and exhibitions
- Size of Events
- The Event Team
- Code of Ethics
- The impact of conventions on local and national communities.

Module - II : Concept and Design
- Developing The Concept
- Analysing The Concept
- Designing The Event
- Logistics of The Concept

Module – III : Feasibility
- Keys to Success
- The SWOT Analysis

Module - IV : Legal Compliance
- Relevant Legislation
- Official Bodies Involved
- Contracts

Module – V : Marketing of Event
- Nature of Event Marketing
- Process of Event Marketing
- The Marketing Mix
- Sponsorship

Module – VI : Promotion
- Image / Branding
- Advertising
- Publicity
- Public Relations

Module – VII : Financial Management
- The Budget
- Break-Even Point & Cash Flow Analysis
- Profit & Loss Statement
- Balance Sheet
- Financial Control Systems

Module – VIII : Risk Management
- Process of Risk Management
- Incident Reporting

- Emergency Response Plans
- Standards for Risk Management

Module – IX : Planning

- Establish The Aims of The Event & Objectives
- Prepare an Event Proposal
- Planning Tools

Module – X : Protocol

- Order of Precedence; Titles; Styles of Address; Dress Codes
- Protocol for Speakers
- Seating Plans
- Religious & Cultural Protocol
- Rules of Flag Flying

Module – XI : Staging The Event

- Choosing The Event Site
- Developing The Theme
- Providing Services
- Managing The Environment

Module – XII : Staffing

- Recruitment & Selection; Rosters
- Training; Briefing Staff
- Managing Volunteers

Module – XIII : Operations & Logistics

- Logistics
- Policies
- Procedures
- Performance Standards
- Functional Areas

TOURISM TECHNOLOGY & MEDIA

Course Code: TRM2705 **Credit Units : 03**

Module – I : The application of technology in tourism

Introduction – Concept – Development – Benefit to Service Providers & Tourists – Future Prospect

Module – II : Tourism Related Software & Internet links

- Brief idea about Software related to booking of Hotel, Ticket for Airlines, Train, Road Transport, Ocean liners
- Tourism related IT innovations such as Virtual Globetrotting, Virtual Adventure Sports, tourism related Apps, Digital Guide, Digital Map etc.
- Digital Marketing and Travel Distribution Emerging Trends
- Creative on-line Destination and Business Approaches and Successes
- On-line Consumer Reviews and the Impact on Operators and Destinations
- On-line data sources to enhance business success like PATAmPOWER [http://mpower.pata.org/]

Module – III : Digital gadgets - replace the need for human tour guides

- Mobile Phone
- Digital Audio Guide
- New Innovations

Module – IV : Role of media in tourism

Awareness generation through powerful effects of media communications in line of -

- Social Interaction and cultural and educational aspects of our life
- peace, security and sustainable development
- social, cultural, economic, political and environmental benefits
- developing eco tourism

Module – V : Dependency of Tourism on media reporting

Module – VI : Social Media and Simple Acts of Kindness

HUMAN RESOURCE MANAGEMENT

Course Code: TRM2706 **Credit Units : 01**

Course Objective:
Human Resource Management has acquired significance in the process and problems of developments both in the case of developed & developing nations of the world. It has acquired importance in the case of tourism & hospitality management in creating permanent & better images in the minds of tourists coming with specific perception & motivations. Further it is a complex phenomenon with many equally important components; each requires special skills & talents. The present course intents to place focus on various segments of the hospitality with regards to management of human resources.

Course Contents:

Module - I: Introduction to Management
Definition, Nature, Scope and Functions of Management, Levels of Management and Management Theories - Classical and Neo - Classical Theories, Systems Approach to organization, Modern Organization Theory.

Module - II: Different Function of Management
Planning,Organizing,Staffing,Directing,Management Control

Module - III: Human Resource Management
Role, importance, & Applications in hotel Industry

Module - IV: Human Resource Planning
Importance and Relevance of HRP, Job Analysis, Job Description, Job Specification & Job Evaluation Method

Module V: Recruitment and Selection
Sources of Recruitment, Selection Process, Induction & Orientation.

Module VI: Training and Development
Training Methods and Evaluation

Module VII: Other Human resource related Functions
Motivation and Productivity ,Job Enrichment ,Career planning employee counseling
Employee Benefits and Welfare Scheme

Module VIII: Disciplinary Issues
Employee Grievance handling process

Module - IX: Case Study
Live case study on HR from Hospitality industry, solving problems & implementation.

Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

ENTREPRENEURSHIP DEVELOPMENT

Course Code: TRM2707 **Credit Units : 01**

Course Objective:

At the end of semester students will be able to-

- Acquire be self-employed and inculcate a habit of self-earning and maintain a dignified life
- Plan a path for hospitality students to make them successful entrepreneurs in their life and contribute to society
- To understand basic knowledge in the field of entrepreneurship development and give them basic exposure of Govt. policies and assistance
- Describes the roles that new venture creation plays in the economy, defines entrepreneurship and show how three factors – individuals, environments and organizations comes through to create the entrepreneurship event
- Impart the knowledge of the resource based framework i.e. Financial, physical, technological, human and organizational
- Exposed get with franchising opportunity and discuss what elements make a business concepts a legitimate franchise opportunity
- Acquire an effective leadership, quality and effective decision-making.

Course Contents:

Module - I: Entrepreneurship Skills

Personality attribute of an entrepreneurs

- Self control-value attitude,Socio-culture factors

Unique characters of the hospitality industry

- Human psychology,Inter-personal relationship,Team building,Customer orientation

Positive entrepreneurship behaviour

- Overcoming external constrains,Solving internal problems

Module - II: Identification of business opportunities in the hospitality industry

Demand / Market Analysis,Present and future competition,Government policy regarding small Enterprises

Module - III: Organization of small enterprises - Form of organization

Sole ownership,Partnership,Private Ltd. Company,Public Ltd. Company,Manpower requirement

Module - IV: Incentives and Assistance-

From central government,From State Government,From Financial Institutions

Module V: Small Enterprises Risk Analysis

Motivational factors,Developing Achievement Orientation,Strength and weakness of Independent Business, Feasibility and viability

Module VI: Establishment of an Enterprise

Registration of business,Licenses and Permits,Financial resources,Organizing material, human and technical resource,Launching the enterprises,Formulating and implanting business strategies

Syllabus – Eighth Semester

BASICS OF REVENUE MANAGEMENT

Course Code: TRM2801 **Credit Units : 02**

Course Objective:

At the end of the semester the students will be able to Explain & understand the concept of Revenue Management, necessity of its implementation in Hospitality Industry

1. Concept of Revenue Management

2. Basic Terms

3. Core Concepts of Revenue Management

4. Strategic Planning
   - 4.1 Supply & Demand Ratio
   - 4.2 Cost & Pricing
   - 4.3 Value Pricing
   - 4.4 Differential Pricing

5. Revenue Maximization vs. Optimization

6. Forecasting Demand

7. Inventory and Price Management

8. Overbooking as a Strategy

9. Managing Distribution Channels

10. Ethical aspects of Revenue Management

RESEARCH METHODOLOGY

Course Code: TRM2802 **Credit Units : 02**

Course Objective:
Research methodology will be taught in the theory class to prepare students how to approach the subject of research project in the semester. To deal with surging information data regarding the various aspects of tourism industry, one should have a working efficiency with research and statistical techniques. The techniques may be applied in collecting, organizing, analyzing and interpreting data for decision-making. These may also be applied for formulating and testing research hypothesis. The course has been designed to equip the students with latest and necessary field techniques and to build a necessary statistical acumen among them. Students will master the skill for-

- Writing different types of research proposals
- Constructing the relevant tools of research
- Conduct a research project using appropriate qualitative and quantitative techniques
- Write a research report
- Evaluate a research report
- Give presentation of report supported by latest aids.

Course Contents:

Module - I: Research Methodology
Meaning of research, Need and importance of research, Types of research, Criteria of good research

Module - III: Data collection, analysis and interpretation (Sample designing)
Types & Sources of Data, Techniques of data collection; Correlation and regression analysis of two variables only. Hypothesis testing Test of significance, Chi-square analysis, Reports

Module - IV: Preparation of research proposals-
Selection and formulation of research problem, Operationalization of concepts and constructs, Review of related literature, Aims and objectives, Hypothesis, method, sample and tools.

Module V: Evaluation of research report
Research Report Format, Presentation of Report

Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

GDPI SESSIONS

Course Code: TRM2804 **Credit Units : 03**

Course Objective:

These sessions would help the students to perform well in the campus interview at the final year stage.

1. **Pre-Preparation before GD/PI**
   - 1.1 Previous day
   - 1.2 Previous night
   - 1.3 Type of food
   - 1.4 Rest & sleep
   - 1.5 On GD/PI day
   - 1.6 Personal Hygiene
   - 1.7 Grooming
   - 1.8 Curriculum Vitae &Testimonials
   - 1.9 Sense of Time

2. Process of Evaluation during Group Discussion
   - 2.1 Skills assessed in a Group Discussion Session
     - 2.1.1 Leadership skills
     - 2.1.2 Communication skills
     - 2.1.3 Interpersonal skills
     - 2.1.4 Persuasive skills
     - 2.1.5 Problem solving skills
     - 2.1.6 Conceptualizing skills
   - 2.2 Rules to follow during the Group Discussion
   - 2.3 Points to remember during Group Discussion
   - 2.4 What to avoid during Group Discussion - Common Mistakes
   - 2.5 Preparations to be taken before appearing in a Group Discussion
     - 2.5.1 Get noticed - But for the right reasons
     - 2.5.2 Egotism Showing off
     - 2.5.3 Quality Vs Quantity

3. Types of Group Discussion GD topics
   - 3.1 Factual
   - 3.2 Abstract
   - 3.3 Argumentative/ Controversial topics
   - 3.4 Opinion based
   - 3.5 Current topics
   - 3.6 Case based topics

4. Steps on how to prepare for an interview?

5. What is an interview?

6. What's the purpose of an interview

7. What to do Before an Interview

RESEARCH PROJECT

Course Code: TRM2837 **Credit Units: 15**

Course Objective:

The purpose of research (Hospitality and Tourism based) is to seek answers to problems through the application of scientific methodology, which guarantees that the information is reliable and unbiased. This information is utilized to make conclusions and recommend solution. Some elementary factors need to be kept in mind while preparing a research and deciding the topic, these could be based on its relevance, feasibility, coverage, accuracy and research, objectivity and ethics.

To deal with surging information data regarding the various aspects of tourism industry, one should have a working efficiency with research and statistical techniques. The techniques may be applied in collecting, organizing, analyzing and interpreting data for decision-making. These may also be applied for formulating and testing research hypothesis. The course has been designed to equip the students with latest and necessary field techniques and to build a necessary statistical acumen among them. Students will master the skill for-

- Writing different types of research proposals and reports
- Constructing the relevant tools of research
- Conduct a research project using appropriate qualitative and quantitative techniques
- Do presentation with the help of tutorial aid
- Evaluate a research report.

The research topic should be assigned by the deputed subject faculty in the beginning of semester & should be approved by PL & HOI. Continuous monitoring and guidance should be provided to student at all the steps.

At the term end, the research project will be presented before a panel and evaluated by examiners (As nominated by HOI). The evaluation should be based on presentation, viva, report content & format & conclusion.

Examination Scheme:

Internal Assessment:

Abstract:	10

FOOD & BEVERAGE SERVICE

Syllabus - Semester First

BASICS OF FOOD SERVICE

Course Code: VHM2152 **Credit Units: 03**

Prerequisites : 10+2

Course Objective:
At the end of the semester the students will be able to –

- Explain the growth and role of hotel industry and catering establishment
- Understand the various types of hotels and their features
- List and explain various catering establishment with their features
- Explain staff organization structure of food and beverage department
- Describe and understand job description of each personnel working in each F&B outlet
- List various F&B service equipment with its use and care.

Course Contents:

Module –I

1.0 Growth of Hotel Industry
  1.1 Sections of The Industry
2.0 Catering Establishments
  2.1 Different Types

Module –II

3.0 Personnel
  3.1 Staff Organisation in F&B Department
  3.2 Attributes of a Waiter

Module –III

4.0 Furniture & Equipment in a Restaurant

Module –IV

5.0 Plan for serving food and beverages
6.0 Greet customer, take orders and serve
7.0 Clean tables and counters

Module –V

8.0 Communicate with customer and colleagues
9.0 Maintain customer-centric service orientation
10.0 Maintain standard of etiquette and hospitable conduct

Syllabus - Semester Second

ADVANCED FOOD SERVICE

Course Code: VHM2252 **Credit Units: 03**

Prerequisites : Basics of Food Service (VHM2152)

Course Objective:

At the end of the semester the students will be able to –

- Explain the various types of Meals
- Define & explain the concept of Menu
- Classify various methods of Service
- Calculate bill for meals & Handle payment made by the guests
- Deal with different types of guests in different situations
- Maintain hygiene and safety at workplace

Course Contents:

Module – I

1.0 Meals & Menu
- 1.1 Types of Meals
- 1.2 Introduction to Menu
- 1.3 Courses of Menu
- 1.4 Classification of Menu
- 1.5 Types of Service

Module – II

2.0 Deal with customer payment
3.0 Resolve customer service issues
4.0 Follow gender and age sensitive service practices

Module – III

5.0 Maintain IPR of organisation and customers

Module – IV

6.0 Maintain health and hygiene
7.0 Maintain safety at workplace

Module – V

8.0 Service Terminology

Examination Scheme:

Components	Internal Assessment			EE	
	V	LP	A	Th	Pr
Weightage (%)	05	20	05	40	30

FRONT OFFICE OPERATIONS

Syllabus - Semester First

FUNDAMENTALS OF FRONT OFFICE OPERATIONS

Course Code: VHM2153 **Credit Units: 03**

Prerequisites : 10+2

Course Objective:

At the end of the semester the students will be able to –

Understand the various types of hotels and their features
Explain the structure of Front Office Department
Develop clear concept about Accommodation facilities
Handle Reservation activities
Deal effectively with Guests &Colleagues
Maintain Personal Care & Safety

Course Contents:

Module – I

1.0 Structure of Front Office Department
- 1.1 Functional Organisation of Front office
- 1.2 Front Desk Layout and Equipment

Module – II

2.0 Accommodation Concept
- 2.1 Size and Types of Hotel
- 2.2 Types of Rooms
- 2.3 Rate Categories
- 2.4 Food Plans
- 2.5 Basis of Charging Room Rates
- 2.6 Tariff Card

Module – III

3.0 Reservation Activities
- 3.1 Processing of reservation request
- 3.2 Systems & Tools used

Module – IV

4.0 Communicate with customer and colleagues
- 4.1 Maintain standard of etiquette and hospitable conduct
- 4.2 Maintain customer-centric service orientation
- 4.3 Follow gender and age sensitive service practices

Module – V

5.0 Personal Care &Safety
- 5.1 Maintain health and hygiene
- **5.2** Maintain safety at work place

Syllabus - Semester Second

HANDLING RECEPTION

Course Code: VHM2253 **Credit Units: 03**

Prerequisites : Fundamentals of Front Office Operations(VHM2153)

Course Objective:

At the end of the semester the students will be able to –

Handle 'On-Arrival' Procedures of a Guest
Understand & Explain various terminologies used in Hotel reception
Handle Guest's Queries, Complaints & Requests
Prepare Guest Bill & Complete the transaction

Course Contents:

Module – I

1.0 On-Arrival Procedures
- 1.1 Receiving, Greeting, Welcoming A Guest
- 1.2 Assessing The Guest Requirements
- 1.3 Registration & Rooming Procedure
- 1.4 Room Change

Module – II

2.0 Concept of - Over Booking, Scanty Baggage, Room Position, Cancellation, Amendment, Walk-in Guest, walking a Guest, Black listed Guest

Module – III

3.0 Attend to guest queries
- 3.1 Handling Guest Requests
- 3.2 Mail Handling Procedures
- 3.3 Message Handling Procedure - Importance, Procedure, Method of Receiving and Transmitting Messages for Guest, Location Form, Paging Procedure

Module – IV

4.0 Checkout & Settlement
- 4.1 Procedures at Reception, Cash Section, Bell Desk
- 4.2 Reduction of Late Charges
- 4.3 Effective Billing & Collection

Module – V

5.0 Maintain IPR of organisation and customers

Syllabus - Semester Third

CHECK-IN & CHECK-OUT PROCESS

Course Code: VHM2353 **Credit Units: 03**

Prerequisites : Handling Reception (VHM2253)

Course Objective:

At the end of the semester the students will be able to –

Understand the importance of Communication
Deal with special situations that may arise during Front Office operations
Handle Guest complaints
Guide staffs in handling situations
Prepare Duty Rota

Course Contents:

Module –I

1.0 Front office Communication
- 2.1 Importance of inter-Departmental Communication
- 2.2 Types & Methods of Communication

Module – II

2.0 Handling of Special Situations Like
- 2.1 DNS, DNA, RNA, NI (No information)
- 2.2 Scanty Baggage Guest
- 2.3 Refusing Accommodation
  - 2.3.1 Black Listed Guest
  - 2.3.2 Walking A Guest

Module – III

3.0 Assist guest in check-in and checkout process –'Express Check-Out'&'Self Check-Out'

Module – IV

4.0 Handling guest complaints and guide front office staff – Staff Organisation, Duty Rotas& Work Schedule

Module – V

5.0 Front Office related terms

Syllabus - Semester Fourth

FRONT OFFICE SUPERVISORY SKILLS

Course Code: VHM2453 **Credit Units: 03**

Prerequisites : Check-in & Check-out Process (VHM2353)

Course Objective:

At the end of the semester the students will be able to –

Understand need of Guests
Handle Guests Requests, Complaints, Messages, Mails
Understand Hotel's Security System
Perform as par the operating System of the department
Guide Staffs in dealing with guests

Course Contents:

Module – I

1.0 Communicating with Guests
- 1.1 Handling Guest Requests & Guest Complaints
- 1.2 Message Handling Procedure – Importance, Procedure, Method of Receiving and Transmitting Messages for Guests, Location Form, Paging Procedure
- 1.3 Importance of Handling Mail without Delay, Sorting of Mail

Module – II

2.0 Facilitate a smooth stay for the guests at the hotel
- 2.1 Manual Key Control Procedure
- 2.2 Left Luggage Procedures
- 2.3 Handling of Special Situations Like – VIP / Spat / DG Guests

Module – III

3.0 Hotel / Front office Security System
- 3.1 Methods
- 3.2 Equipment Used
- 3.3 Card Key Control
- 3.4 Emergency Procedures
- 3.5 Management's Role in Security

Module – IV

4.0 Front office Systems
- 4.1 Non-Automated
- 4.2 Semi- Automated
- 4.3 Fully- Automated

Module – V

5.0 Train and supervise front office staffs for –
- 5.1 Receiving, Greeting, Welcoming A Guest
- 5.2 Assessing The Guest Requirements in cases like – FIT, VIP, Group, Foreigner

FRONT OFFICE YIELD MANAGEMENT

Course Code: VHM2553 **Credit Units: 03**

Prerequisites : Front Office Supervisory Skills (VHM2453)

Course Objective:

At the end of the semester the students will be able to –

Explain the concept of Yield Management
Take measures to maximize yield of the department
Deal with Staff needs
Analyze Training needs and arrange Training

Course Contents:

Module –I

1.0 Yield Management
- 1.1 Concept of Yield Management
- 1.2 Capacity Management
- 1.3 Discount Allocation

Module – II

2.0 Measuring Yield
- 2.1 Potential Average SGL / DBL Rate
- 2.2 Multiple Occupancy Percentage
- 2.3 Rate Spread
- 2.4 Potential Average Rate
- 2.5 Room Rate Achievement Factor
- 2.6 Yield Statistic
- 2.7 Equivalent Occupancy
- 2.8 Required Non-Room Revenue Per Guest

Module – III

3.0 Elements of Yield Management
- 3.1 Group Room Sales
- 3.2 Transient Room Sales
- 3.3 Food & Beverage Activity
- 3.4 Special Events

Module – IV

4.0 Application of Yield Management Concepts

Module – V

5.0 Human Relations Management

Version - 1.1		3	0	2	4
Pre-requisites / Exposure : 10+2	Co-requisites : Nil				

Course Description

The back-to-basics course helps students to understand the foundations of the core Hospitality and Tourism subjects. The topics will help students to prepare for the first step in the industry. All the fundamental topics from the core areas of Hospitality and Tourism will be focused upon.

Course Objective:

1. To learn the fundamentals of each core area of Hospitality and Tourism.
2. To revise the basics of all core courses.
3. To improve the confidence levels in students to appear for placement Interviews.

Learning Outcome

After completing this course, the student will be able to:
LO1: Retrieve the basics of hotel operations and the travel & tourism industry.
LO2: Associate the basics of theories and practical's of the hotel, hospitality, and tourism industry.
LO3: Executing the labs independently.

Course Outcome (CO)

On completion of this course, the students will be able to:
CO1: To define the overview of the hospitality and tourism industry.
CO2: To highlight, summarize and execute the basics of culinary arts and baking.
CO3: To memorize and relate to the fundamentals of food and beverage service.
CO4: To quote and interpret the basics of the front office and housekeeping operations.
CO5: To identify the fundamentals of the travel and tourism industry.

Course Content

Modules	Blooms level*	Number of hours
Module – 1 : Introduction the Tourism Industry • Definition of tourism • Historical evolution and growth of the industry • Importance of the industry in global economy • Key sectors within tourism (accommodation, food & beverage, travel services, etc.) • Career opportunities in the industry	*L1*	8
Module – 2 : Tourism Segments and Types • Tourism segments e.g., domestic, international, mass, niche, etc. • Types of tourism.	*L1, L2, L3*	4
Module 3: Travel Facilitators and Documentation. • Travel facilitators (travel agencies, tour operators, online platforms) • Travel documentation (passports, visas, travel insurance)	*L1, L2*	6
Module 4: Introduction to Hotel Operations • Types of Hotels and their classifications.	*L1, L2*	6

Course Code : DHMC2351	Course : Supervising Hotel Operations	L	T	P	C
Version - 1.1		3	0	2	4
Pre-requisites / Exposure : DHMC2251	Co-requisites : Nil				

Course Description

This course provides an in-depth look at the day-to-day operations of hotels, including front office management, housekeeping, and maintenance. Students will learn about the key performance indicators used to measure a hotel's success.

Course Objectives:

The student will get knowledge about:

- A better perspective of the lodging industry, both domestic and international.
- Understanding the history of the lodging industry and identify future trends that will affect it.
- Identification the relationship between a hotel's operational departments.
- Understanding common lodging terms, and how they are used in the hotel industry.
- The operating goals of the modern hotel.
- The basic organizational structure of a hotel.

Course Outcomes (CO)

On completion of this course, the students will be able to

CO1: Identify the Hotel operations.
CO2: Describe the advanced techniques used in hotel industry.
CO3: Prepare reservation chart, check-in, check-out procedure.
CO4: Handle guest services
CO5: Understand the modern technology and practices in hospitality industry.

Course Content

Modules	Blooms level*	Number of hours
	L1	2
Module – 1 : The Traditional Hotel Industry Introduction, Organisational Structure of small, medium, and large hotel, History of Hotel Industry, Indian hospital industry	L1	8
Module – 2 : The Modern Hotel Industry Introduction, emerging trends in hotel industry, demand in modern era, modern facilities provided by hotel, staffing and their duties in modern trends.	L1, L2	8
Module – 3 : Changing trends in Hospitality. Hygiene not just cleanliness Training and motivation Trends	L1, L2	6
Module – 4 : Hotel Technology Introduction, Emerging trends in technology adoption in hotels, eco-friendly practices in various departments of hotel, handling emergencies	L1, L2	6
Module – 5 : New Property Operations Division of work Staffing consideration	*L1*	8

Course Code : DHMC2451	Course : Managing Tourism Operations	L	T	P	C
Version - 1.1		3	1	0	4
Pre-requisites / Exposure : DHMC2351	Co-requisites : Nil				

Course Description
In this course the various concepts of Tourism Management will be addressed.

Course Objectives
At the end of the semester the students will develop a clear concept on –

- Tourism and Tourists.
- Tourists Characteristics and preferences
- Tourism destinations and Management
- Tourism Product Development

Course Outcomes
On completion of this course, the students will be able to
CO1 : Define the concept Tourism
CO2 : State Characteristics of Tourists
CO3 : Identify Tourism Destinations
CO4 : Manage Destination operations
CO5 : Develop a Tourism Product

Modules	Blooms level*	Number of hours
Module – 1 : Introduction to Tourism • What is Tourism? • Factors that Motivate People to Travel • Traditional and Niche Tourism • What is Tourism Management? • Types of Tourism & Tourism Terminology • Factors Affecting Tourism & Demand of Tourism	L1, L2	8
Module – 2 : Characteristics of Tourists • Motivation Factors of the Tourists • Maslow's Pyramid of Motivation • Internal & External Factors of Motivation • Plog's Model of Tourist Typologies • Consumer Behavior in Tourism • Factors Affecting Tourist Behavior: Intrinsic and Extrinsic • Henley Centre Model of Holidaymaking	L1, L2	8
Module – 3 : Tourism Destinations • Destination Awareness • What is a Tourist Destination? • How Can a Destination Attract Tourists? • The Five A's • Types of Tourist Destinations • Building Online Destination Awareness • Milieus of Tourism : Geographical & Cultural	L1, L2	10
Module – 4 : Destination Management • What is Destination Management? • Why Manage Destinations?	L1, L2	12

Version - 1.1		3	0	2	4
Pre-requisites / Exposure : DHMC2451	Co-requisites : Nil				

Course Description

This course is intended for students to gain expertise in F&B service. The student will develop clear concepts on F&B Control, Menu Planning & Analysis, Restaurant designing, HR Planning after completing this course.

Course Objectives

The student will get knowledge about-

- F&B Control, Menu Engineering and Budgetary control.
- F&B Service procedures and planning of operational requirements providing them desired efficiency and effectiveness in the subject.
- Advanced Menu Planning, concept of Menu Engineering, Planning Special Menus
- Planning and Designing of Restaurant & other F&B outlets
- Planning of Human Resource

Course Outcomes

On completion of this course, the students will be able to

CO1 : Explain various control mechanisms in F&B operations
CO2 : Illustrate different concepts of Advanced Menu Planning using Menu engineering
CO3 : Plan layouts and design the operational area of the F&B POS
CO4 : Conduct and plan service of various special menus
CO5 : Conduct Human Resource planning of F&B department

Course Content

Modules	Blooms level*	Number of hours
Theory Sessions		
Module – 1 : F&B Control Cycles of Control, Purchasing, Receiving, Storing, Issuing, Preparation, Costing & Selling, Food Costing, Food Cost Control, Checks & Checking System, Standard Costing, Variance Analysis, Liquor Control, Purchase Procedures, Assessment of Quality, Stock Control, Beverage Sales Control	L1, L2, L3, L4, L5	8
Module – 2 : Menu Analysis & Menu Planning Menu Engineering, Concept, KOT Analysis, Classification of dishes, Remedial measures, Menu Planning, Objectives & Procedures, Menu Planning Considerations & Constrains, Menu Designing, Menu Merchandising, Regional Cuisine, Menu writing of regional dishes, Table laying of regional dishes, Service of regional dishes	L1, L2, L3, L4, L5	8
Module – 3 : Budgets Budgets & Budgetary Control, Definition, Different Types of Budgeting, Different Steps of Preparing Different Budgets, Budgetary Control, Formats for Budgeting	L1, L2, L3, L4, L5	6

Course Code : DHMC2501	Course : Revenue & Yield Management	L	T	P	C
Version - 1.1		3	1	0	4
Pre-requisites / Exposure :	Co-requisites : Nil				

Course Description

This course is intended for students to gain expertise in Revenue & Yield Management. The student will develop clear concepts on generating Revenue for the organization. They will also understand the importance of yield and learn various methods of maximizing the same.

Course Objectives

The student will get knowledge about-

- Concept of Revenue Management,
- Yield determination
- Elements & use of Revenue management
- Amalgamation of Human resources & Technical resources in Revenue Management
- Yield Management application

Course Outcomes

On completion of this course, the students will be able to

CO1 : Explain various Concept of Revenue Management
CO2 : Illustrate different concepts Yield determination
CO3 : Implement Revenue management in Hotel operations
CO4 : Relate Human Resource & Technical resources in Revenue Management
CO5 : Conduct and plan yield management activities

Course Content

Modules	Blooms level*	Number of hours
Module - 1 : The Concept of Revenue Management • Hotel Industry Applications • Benefits of the techniques / Areas where this concept is applied / How the concept is applied	L1, L2, L3, L4, L5, L6	8
Module - 2 : Measuring Yield • Yield Statistic / Determination of Potential Revenue / Potential Average Single Rate / Potential Average Double Rate / Multiple Occupancy Percentage / Rate Spread / Potential Average Rate / Room Rate Achievement Factor / Identical Yields / Equivalent Occupancy / Required Non-Room Revenue per Guest	L1, L2, L3, L4, L5, L6	8
Module - 3 : Elements of Revenue Management • Group Room Sales / Transient Room Sales / Food & Beverage Activity / Local and Area-Wide Activities / Special Events	L1, L2, L3, L4, L5, L6	6
Module - 4 : Using Revenue Management • Potential High and Low Demand Tactics • Implementing Revenue Strategies / Availability Strategies •	L1, L2, L3, L4, L5, L6	6
Module - 5 : Revenue Management Computer Software • Works performed by Revenue Management Software • Working on the software/system • Advantages of computerized revenue management • Reports generated •	L1, L2, L3, L4, L5, L6	8

Course Code : DHMC2651	Course : Rooms Division Management	L	T	P	C
Version - 1.1		3	0	2	4
Pre-requisites / Exposure : DHMC2551	Co-requisites : Nil				

Course Description:
This course is intended for students who want to pursue their career in Rooms Division. This course shares common fundamental concepts about Rooms Division Management using various interactive teaching methodologies & lab sessions.

Course Objective:
- To focus and provide knowledge about establishing room rates, budgeting for operations & forecasting room availability.
- To impart learnings about yield management, elements of yield management, measuring yield & human relations management theory.
- Defining process of Budgeting, purchasing, controls in the housekeeping department, recruitment of staff
- To understand Interior Designing, Interior Decoration Safety & Security protocols of hotel.
- To understand recruitment, use of duty roster ,training and standard operating manuals.

Learning Outcome:
After completing this course, the student will be able to:
LO1: Retrieve the concept of establishing room rates, budgeting for operations & forecasting room availability.
LO2: Associate with the concept of yield management, elements of yield management, measuring yield & human relations management theory.
LO3 Predicting the process of budgeting, purchasing, controls in the housekeeping department, recruitment of staff.
LO4: Summarize Interior Designing, Interior Decoration Safety & Security protocols of hotel.
LO5: Determine about recruitment, use of duty roster, training and standard operating manuals.

Course Outcome (CO):
On completion of this course, the students will be able to:
CO1: Explain the process of establishing room rates, budgeting for operations & forecasting room availability.
CO2: Describe the concept of yield management, elements of yield management, measuring yield & human relations management theory.
CO3: Explain the use & importance of budgeting and purchasing.
CO4: Explain the use of elements of interior designing, interior decoration & List and explain various types of fires and their extinguishing procedures.
CO5: Learn First Aid, crime prevention & dealing with emergencies Define the purpose of controls in the housekeeping department & Understand recruitment, use of duty roster ,training and standard operating manuals.

Course Content:

Modules	Blooms level*	Number of hours
Module – 1 : Establishing Room Rates, Budgeting for Operations & Forecasting Room Availability • Market Condition Approach • Rule-of-Thumb Approach • Hubbart Formula	L1, L2, L3, L4	8

HOUSEKEEPING FUNCTIONS

Syllabus - Semester First

BASICS OF HOUSEKEEPING

Course Code: VHM2154 **Credit Units: 03**

Prerequisites : 10+2

Course Objective:

At the end of the semester the students would have a thorough knowledge of:

Organization of Housekeeping department and its basic functioning
All agents and equipment used for cleaning of all possible surfaces

Course Contents:

Module –I

1.0 Housekeeping Department in Hospitality Industry
- 1.1 Role of Housekeeping in Guest satisfaction and repeat Business
- 1.2 Organizational Structure of Housekeeping Department for: Small Hotel, Medium Hotel, Large Hotel
- 1.3 Layout of the Housekeeping Department

Module –II

2.0 Cleaning Equipment
- 2.1 General Consideration for Selection
- 2.2 Classification & Types of Equipments
- 2.3 Method of Use and Mechanism for Each Type
- 2.4 Care and Maintenance

Module – III

3.0 Cleaning Agents
- 3.1 Classification
- 3.2 General Criteria for Selection
- 3.3 Use, Care & Storage
- 3.4 Distribution & Control

Module – IV

4.0 Care and Cleaning of Different Surface
- 4.1 Metals, Glass, Ceramics, Wood, Wall finishes, Floor finishes, Floor Coverings

Module – V

5.0 Communicate with customer and colleagues
6.0 Maintain safety at workplace

LAUNDRY OPERATIONS

Course Code: VHM2354 **Credit Units: 03**

Prerequisites : Rules for Cleaning (VHM2254)

Course Objective:
At the end of the semester the students would have a thorough knowledge of:

Fibre & Fabrics
Laundry Operations
Stain Removal

Course Contents:

Module – I

1.0 Fibres& Fabrics
- 1.1 Definition of Fibre
- 1.1 Classification of Fibre - The Origin, Characteristics & Usage in the Hotel, Care & Cleaning

Module – II

2.0 Laundry in Hotel
- 2.1 Duties & Responsibilities of Laundry Staff (Laundry Manager and Shift-In-Leader, Dry Cleaning, Supervisor, Spotter cum Presser, Laundry Clerk, Attendants Valet Runner, Laundry)
- 2.2 Importance and Principles of Laundry Operations
- 2.3 Equipment, Layout & Planning & Laundry (Basic Rules)

Module – III

3.0 Laundry Work Flow
- 3.1 Flow Process of industrial Laundering [Collection, Transportation Arrivals, Sorting, Weighing, Loading, Washing, Rinsing, Starching, Hydro-Extraction, Drying, Unloading, Tumbling, Finishing (Calender / Steam Press) Folding, & Storing Transfer & Use]
- 3.2 Stages in Wash Cycle (Flush-Suds-Bleach Rinse-Sour & Soft-Extract, Break & Soaking)

Module – IV

4.0 Laundry Cleaning Agents
- 4.1 Role of Laundry Agents
- 4.2 Classification of Laundry Agents (Synthetic, Detergent, Built Soap Detergents, Enzyme Action- Detergents, Explain Briefly)

Module – V

5.0 Stain Removal
- 5.1 Special Equipment & Agents
- 5.2 Process of Stain Removal

Syllabus - Semester Second

TOUR OPERATIONS & TOURIST GUIDANCE

Course Code: VTM2251 **Credit Units: 03**

Prerequisites : Fundamentals of Tourism (VTM2151)

Course Objective:
At the end of the semester the students would have a thorough knowledge of:
Various forms of Tourism
Effective communication with Tourists
Guiding Tourists

Course Contents:
Module – I
1.0 Guide tourists at religious destinations
2.0 Guide tourists during culture tours

Module – II
3.0 Guide tourists at nature/eco/rural spots
4.0 Guide tourists during gastronomy tours

Module – III
5.0 Guide tourists in leisure and recreation tours
6.0 Guide tourists in cruise

Module – IV
7.0 Guide tourists for sporting events
8.0 Guide tourist on desert tours

Module – V
9.0 Guide tourist on wellness and medical tours

Examination Scheme:

Components	Internal Assessment				EE
	V	H	CT	A	Th
Weightage (%)	05	05	15	05	70

V-Viva; H-Home Assignment; CT-Class Test; A-Attendance; EE-End Semester Examination

Suggested Readings:

Syllabus - Semester Third

HANDLING TRAVEL AGENCY

Course Code: VTM2351 **Credit Units: 03**

Prerequisites : Tour Operations & Tourist Guidance (VTM2251)

Course Objective:

At the end of the semester the students would have a thorough knowledge of:

Tour Package
Planning of Tour Package
Designing Tour Packages

Course Contents:

Module –I

1.0 Tour Package - Meaning, Type of Tour Package & its Components

Module – II

2.0 Planning of Tour Package
- 2.1 Designing and Process of Tour Package
- 2.2 Engage with customer to understand their tour packaging requirements
- 2.3 Plan travel itinerary as per customer's requirement
- 2.4 Factor Affecting Tour Package
- 2.5 Arrange tour package in coordination with service providers and partners

Module – III

3.0 Designing Tour Packages
- 3.1 Cultural Tourism Product: Designing, Development, Issues and Considerations
- 3.2 Heritage Tourism Product: Designing, Development, Issues and Considerations
- 3.3 Religious Tourism Product: Designing, Development, Issues and Considerations

Module – IV

4.0 Designing Tour Packages
- 4.1 Adventure Tourism Product: Designing, Development, Issues and Considerations
- 4.2 Medical Tourism Product: Designing, Development, Issues and Considerations

Module – V

5.0 Destination Management
- 5.1 Meaning, Factor of Consideration to choose Destination Management Handling Company
- 5.2 Monitor the tour progress
- 5.3 Maintain IPR of organisation and customer

Examination Scheme:

Components	Internal Assessment				EE
	V	H	CT	A	Th

Syllabus - Semester Fourth

COORDINATING TOUR TRANSPORTATIONS

Course Code: VTM2451 **Credit Units: 03**

Prerequisites : Handling Travel Agency (VTM2351)

Course Objective:
At the end of the semester the students would have a thorough knowledge of:
Transport System
Transport Schedule& Arrangement for tourists

Course Contents:
Module – I
1.0 Modes of Transport
1.1 Road ways
1.2 Railways
1.3 Air ways
1.4 Water ways

Module – II
2.0 Types of transport operator
2.1 Public & Private
2.2 Domestic & International

Module – III
3.0 Transport Schedule
3.1 Travel Time
3.2 Preparation of itinerary

Module – IV
4.0 Interact with the customers or tourists
5.0 Arrange for the travel

Module – V
6.0 Follow up with customer or tourist

Examination Scheme:

Components	Internal Assessment				EE
	V	H	CT	A	Th

Syllabus - Semester Fifth

TOURISM MANAGEMENT

Course Code: VTM2551 **Credit Units: 03**

Prerequisites : Coordinating Tour Transportations (VTM2451)

Course Objective:
At the end of the semester the students would have a thorough knowledge of:

Motivation of Travel and Tourism
Significance of Travel and Tourism
Growth factors of Tourism& its barriers
Eco-Tourism

Course Contents:

Module –I

1.0 Motivation of Travel and Tourism
- 1.1 Physical Motivations: Travel for Sports and Adventure, Rest and Relaxation, Health and Medical Reasons etc.
- 1.2 Cultural Motivations: Pilgrimage Tourism, Cultural Curiosity, Religious etc.
- 1.3 Interpersonal Motivation: Meeting New People, VFR, etc
- 1.4 Status and Prestige Motivation
- 1.5 Business Motivation

Module – II

2.0 Significance of Travel and Tourism
- 2.1 The Economic, Social and Cultural Significance of Tourism

Module – III

3.0 Growthfactors of Tourism
- 3.1 Technology and Destination Development
- 3.2 Changing Social Patterns
- 3.3 Changing Living Standards

Module –IV

4.0 Barriers to the Growth of Tourism
- 4.1 Factors Existing at the Destination: Terrorism, & Political and Social Environment
- 4.2 Factors Barring a Potential Tourist from Traveling: Time, Cost, and Social Barriers.

Module – V

5.0 Eco-Tourism Planning and development strategies
- 5.1 Eco-Tourism Strategies with Special Reference to Environmental Protection (Environmental Impact Analysis)

Syllabus - Semester Sixth

EVENT PLANNING

Course Code: VTM2651 **Credit Units: 03**

Prerequisites : Tourism Management (VTM2551)

Course Objective:

At the end of the semester the students would have a thorough knowledge of:

Concept of MICE
Marketing MICE
Planning MICE
Staging MICE

Course Contents:

Module – I

1.0 Introduction to Concept of MICE
- 1.1 Types of Events- meetings, incentives, conference/conventions, and exhibitions
- 1.2 Size of Events
- 1.3 The Event Team
- 1.4 Code of Ethics
- 1.5 The impact of conventions on local and national communities.

Module – II

2.0 Map the customer requirement
- 2.1 Visualise the need
- 2.2 Guide the customer
- 2.3 Estimate the budget

Module – III

3.0 Concept and Design
- 3.1 Developing The Concept
- 3.2 Analysing The Concept
- 3.3 Designing The Event
- 3.4 Logistics of The Concept

Module – IV

4.0 Marketing of Event
- 4.1 Nature of Event Marketing
- 4.2 Process of Event Marketing
- 4.3 The Marketing Mix
- 4.4 Sponsorship

Module – V

5.0 Staging The Event
- 5.1 Choosing The Event Site
- 5.2 Developing The Theme
- 5.3 Providing Services
- 5.4 Managing The Environment

SEMESTER-I

DPSY2151	INTRODUCTION TO PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	2023	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course introduces the basics of psychology, covering its main theories, important terms, methods, and fields. It looks at the history of psychology from both Western and Indian perspectives, highlighting important contributions from different cultures and people therein. Students will learn about various schools of thought like Structuralism, Functionalism, Behaviorism, Gestaltism, Psychoanalysis, Humanism, Existentialism, and Cognitive Psychology. The course also explores different methods used in psychology, such as introspection, observation, experiments, interviews, questionnaires, and surveys. Additionally, it discusses key concepts and theories of learning, including Classical Conditioning, Operant Conditioning, and Insight Learning, as well as the idea of transfer of training. This course sets the stage for further study in psychology.

Course Objectives

This course is designed to introduce the science of psychology. It identifies and defines the theories, terms, methods, and various fields of psychology. This course can be used as a foundation towards continued education in more specific areas of psychology. General Psychology encourages students to study in depth the notions of modern scientific psychology. Upon completion of this course, student should have the following objectives:

- To know the major personalities important to the field of general psychology and the ideas, theories, and schools with which they are associated.
- To know the major terms associated with general psychology and their meanings.
- To know the major concepts associated with the area of general psychology.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. learn the main theories, concepts, and schools of thought in psychology, including both Western and Indian perspectives.
2. Identify important personalities in psychology and understand their ideas and theories.
3. Know how to use different psychological methods like introspection, observation, experiments, interviews, questionnaires, and surveys.
4. learn about various types of learning and key theories such as Classical Conditioning, Operant Conditioning, and Insight Learning.
5. Understand the concept of transfer of training, including its types and related theories.

Course Content:

Catalog Description

This course provides an in-depth understanding of the scientific methods used in experimental psychology. Students will explore the history and steps of the experimental method, basic concepts of psychophysics, and sensory processes, including the structure and function of sensory organs. The course covers perceptual processes, focusing on how we perceive space, depth, and distance, and examines perceptual illusions. It also addresses the nature and theories of emotions and motivation. By the end of the course, students will be prepared for advanced studies in experimental psychology.

Course Objectives

The basic general objective of Experimental Psychology is to familiarize the student with a basic and broad understanding of the scientific method and its application to the problems of Psychology. The course focuses on the logic, principles and practices of modern science and how it is applied to understanding the nature of reality. Successful completion of this course will prepare the student for graduate work and advanced experimental concepts.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. learn the meaning, history, and steps of the experimental method, including psychophysics and threshold determination.
2. Understand the types of senses and their functioning, such as vision, hearing, smell, taste, touch, temperature, pain, kinesthetic, and vestibular senses.
3. Grasp the nature of perception, principles of perceptual organization, and concepts like space, depth, distance perception, and perceptual constancy, including illusions, delusions, and hallucinations.
4. Learn about the nature and characteristics of emotions, bodily and physiological changes, and key theories of emotion.
5. Understand the nature of motivation, motivational cycles, types of needs, drives, and incentives, and major theories of motivation.

Course Content:

Modules	Blooms level*	Number of hours
Module I Meaning and History of Experimental Psychology Steps of Experimental method Psychophysics: Basic Concepts, Stimulus and Differential Threshold Determination of Thresholds: Method of Limits, Method of Average Error, Method of Constant Stimuli	**L1, L2, L3**	18
Module II Sensory Process: Meaning and Types of Senses, Sensation and Sensitivity Visual Sense- Structure and Functioning of Eye Hearing Sense- Structure and Functioning of Ear Chemical Senses- Sense of Smell and Sense of Taste Skin Senses- Sense of Touch or Pressure, Sense of Temperature and Pain Body Senses- Kinesthetic Sense and Vestibular Sense	**L1, L2, L3**	18

Catalog Description

This course provides hands-on experience in administering, scoring, and interpreting psychological tests. Students will learn the basic procedures and design of psychological experiments and will be introduced to elementary/basic statistical techniques. Additionally, the course encourages students to undertake a small-scale research project, fostering practical research skills. A total of six practical will be conducted in the first semester, with the first three being mandatory

Course Objectives

1. To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology experiments.
3. To familiarize the students with the use of elementary statistical techniques.
4. To encourage and guide the students to undertake a small-scale research project.

Note: Total of 6 practicals will be conducted in the first semester among the list of following practicals out of which the first three practicals are compulsory.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. learn to effectively administer, score, and interpret various psychological tests.
2. gain knowledge of the basic procedures and design of psychological experiments.
3. introduced to elementary statistical techniques used in psychology.
4. encouraged and guided to undertake small-scale research projects.
5. Apply practical skills Through practical exercises like the Muller Lyre Illusion, Mental Health Checklist, Emotional Intelligence Questionnaire, Students Stress Scale, Depth Perception, and Maze Learning, students will apply their theoretical knowledge to real-world scenarios.

Course Content:

1.	Muller Lyre Illusion	Perception Illusion
2.	General Health Questionnaire	Psychiatric Disorder
3.	Emotional Maturity Scale	Emotional Intelligence
4.	Peer Pressure Scale	Peer Pressure
5.	Depth perception	Perception
6.	Mirror Drawing	Motor Learning

Catalog Description
This course offers a comprehensive introduction to the field of social psychology, examining how individuals' behaviors, thoughts, and feelings are shaped by social influences. It integrates empirical research, and real-world applications to explore the dynamics of human interaction and social influence.

Course Objectives:
- Understand and critically evaluate key theories and concepts in social psychology.
- Develop insights into how social factors influence individual behavior and mental processes.
- Apply social psychological principles to real-world issues and personal experiences.
- Conduct and analyze research in social psychology.
- Enhance skills in critical thinking, communication, and collaboration.

Course Outcomes:
By the end of this course, students will be able to:
- Articulate and summarize major theories and foundational concepts in social psychology, such as social cognition, social influence, and group dynamics.
- Understand the historical development and the evolution of social psychological thought.
- Apply social psychological theories to explain social behaviors and events in real-world contexts. Identify and analyze the cognitive and social factors that influence individual and group behavior in various situations.
- Utilize social psychological principles to develop strategies and interventions for reducing prejudice, discrimination, and intergroup conflict.
- Implement social psychological insights in everyday life and professional settings, such as in understanding and improving interpersonal relationships, workplace dynamics, and community interactions.

Course Content:

Modules	Blooms level*	Number of hours

Manesar Gurgaon-122413

Pre-requisites/Exposure	Nil
Co-requisites	Nil

Catalog Description:
This course introduces the fundamental concepts and methods of Statistics as applied in behavioral science. Students will learn to quantify psychological data and understand and apply elementary statistical principles. The course emphasizes the logic of statistical reasoning and the practical application of statistical techniques to psychological research. Mastering these skills will prepare students to critically evaluate research findings and succeed in more advanced Psychology courses.

Course Objectives:
The paper on statistics introduces the quantification of psychological data and gives the students a primary research orientation. Understanding statistics and the basic logic of statistics is crucial to reading psychology research articles. Further, by mastering the basic logic and ways of thinking about Statistics, students will be unusually well prepared for the advanced courses. Below are the objectives of studying this paper on Psychology:

1. Understand how to accurately measure and quantify various psychological phenomena and data.
2. Gain primary research skills and orientation essential for conducting psychological research.
3. Develop a solid understanding of the basic logic and principles of Statistics, which is crucial for interpreting research findings.
4. Acquire the ability to critically read and comprehend psychology research articles that utilize statistical methods.
5. Build a strong foundation in Statistics that will prepare students for more advanced courses in Psychology and related fields.

Course Outcomes (COs):
By the end of this course, students will be:

1. Accurately quantify psychological data using appropriate statistical methods.
2. Develop a strong understanding of the basic logic and principles of Statistics, essential for interpreting research findings in Psychology.
3. Capable of critically reading and evaluating psychology research articles that employ statistical methods.
4. well-prepared for advanced Psychology courses that require a solid understanding of statistical concepts.

Course Content:

Modules	**Blooms level***	**Number of hours**
Module 1 Meaning, Definition, Relevance and Limitations of Statistics in Psychology Categories of statistics: Descriptive and Inferential	**L1, L2, L3**	18
Module 2 Primary and Secondary Data Classification and Tabulation of Data Frequency Distribution, Computation of percentiles and percentiles ranks from grouped data.	**L1, L2, L3**	18
Module 3 Graphical presentation of Data: Histograms, Frequency polygon, Frequency Curve, Cumulative Frequency Curve (Ogive), Cumulative Percentage Curve	**L3, L4, L5**	18

DPSY2202	CLINICAL PSYCHOLOGY PRACTICALS-II	L	T	P	FW/ Proj	C
Version	**2023**	0	0	2	0	1
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course introduces the use and interpretation of psychological assessment tools. Students will learn about various scales and questionnaires used to measure different psychological constructs, such as social intelligence, aggression, adjustment, leadership, social maturity, and attitudes toward home and family. The course emphasizes developing the skills needed to administer, score, and interpret these assessments and to understand their applications in psychological research and practice.

Course Objectives

Below are the objectives of conducting practical this semester:

1. Understand the purpose and applications of various psychological scales and questionnaires.
2. Develop skills to administer and score different psychological assessments properly.
3. Learn to interpret the results of these assessments meaningfully.
4. Gain insights into key psychological constructs such as social intelligence, aggression, adjustment, leadership, social maturity, and attitudes.
5. Understand how these tools can be used in psychological research and applied settings.
6. Learn about the ethical issues involved in the use of psychological assessments.

Course Outcomes (COs):

Upon successful completion of this course, students will be able to:

1. Demonstrate an understanding of various psychological assessment tools and their applications.
2. Accurately administer and score the Social Intelligence Scale, Aggression Questionnaire, College Adjustment Scale, Authentic Leadership Questionnaire, Vineland Social Maturity Scale, and Attitude Scale Towards Home and Family.
3. Effectively interpret the results from these assessments and explain their implications.
4. Describe the psychological constructs measured by these tools and understand their relevance in different contexts.
5. Apply these assessment tools in research projects or practical settings, demonstrating their practical utility.
6. Recognize and adhere to ethical guidelines in administering, scoring, interpreting, and reporting psychological assessments.

Course Content:

1.	SOCIAL INTELLIGENCE SCALE	Social Intelligence
2.	AQ – AGGRESSION QUESTIONNAIRE	Aggression
3.	CAS – COLLEGE ADJUSTMENT SCALE	Adjustment
4.	ALQ – AUTHENTIC LEADERSHIP QUESTIONNAIRE	Leadership
5.	VSMS – VINELAND SOCIAL MATURITY SCALE	Social Maturity
6.	ATTITUDE SCALE TOWARDS HOME AND FAMILY	Attitude

SEMESTER-III

DPSY2351	COGNITIVE PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides an in-depth exploration of key topics in cognitive psychology. Through lectures, discussions, and practical exercises, students will examine the theoretical foundations, empirical research, and practical applications of cognitive processes. Topics include attention processes, thinking, problem-solving, reasoning, decision-making, intelligence, memory, forgetting, language, and language disorders. Emphasis is placed on understanding the nature of cognition, its underlying mechanisms, and its implications for human behaviour.

Course Objectives:

1. To introduce students to the history, background, and foundational concepts of cognitive psychology.
2. To familiarize students with various theories and models related to attention processes, thinking, problem-solving, reasoning, decision-making, intelligence, memory, forgetting, language, and language disorders.
3. To enable students to critically analyse and evaluate research findings and theoretical perspectives in cognitive psychology.
4. To develop students' ability to apply cognitive psychology principles to real-world situations and problem-solving tasks.
5. To enhance students' understanding of the complexities of human cognition and its relevance to other disciplines such as education, neuroscience, and artificial intelligence.

Course Outcomes:

By the end of the course, students will be able to:

1. Describe the historical development and theoretical frameworks of cognitive psychology.
2. Identify different types of attention and factors influencing attentional processes.
3. Analyse various methods and stages of problem-solving and decision-making.
4. Evaluate theories of intelligence and their implications for understanding human cognition.
5. Discuss the nature and stages of memory, as well as factors affecting memory formation and retrieval. They will also recognize the causes and theories of forgetting and apply strategies to improve memory.
6. Define language and its components and identify common language disorders.
7. Apply cognitive psychology principles to analyse and solve real-world problems.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction, History, and Background of Cognitive Psychology	**L1, L2, L3**	18
Module II: Attention Processes Nature and Meaning of Attention Types of Attention Factors affecting Attention.	**L1, L2, L3**	18

Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course offers a comprehensive introduction to psychology's research methods and statistical techniques. Students will explore research design fundamentals, including experimental and non-experimental methods, and learn to differentiate between qualitative and quantitative research. The course covers the entire research process, from formulating questions and hypotheses to ethical considerations. Additionally, students will gain knowledge of sampling techniques and delve into both parametric and non-parametric statistical methods, enhancing their ability to analyse and interpret psychological data.

Course Objectives

1. Provide a foundational understanding of research and its various types in Psychology.
2. Equip students with the skills to navigate the research process, including formulating research questions and hypotheses.
3. Instil the importance of ethical considerations in conducting research.
4. Differentiate between experimental and non-experimental research designs and qualitative vs. quantitative methods.
5. Introduce various sampling techniques and concepts of population and sample.
6. Teach the basic differences and applications of parametric and non-parametric statistical methods.
7. Familiarize students with key statistical tests and their uses in psychological research.

Course Outcomes (COs)

On completion of this course, the students will be able to

1. Define research and describe different types of research used in Psychology.
2. Outline and implement the steps involved in the research process.
3. Identify and apply ethical principles in the design and conduct of psychological research.
4. Differentiate between experimental and non-experimental research, and between qualitative and quantitative research methods.
5. Develop clear and testable research questions and hypotheses.
6. Define and operationalize variables for research purposes.
7. Apply appropriate sampling techniques and determine suitable sample sizes for research studies.
8. Distinguish between parametric and non-parametric statistical methods, understanding their assumptions and appropriate uses.
9. Conducted and interpreted results from parametric tests such as t-tests, ANOVA, and correlation analyses.
10. Conducted and interpreted results from non-parametric tests such as the Mann-Whitney, Spearman rank-order, and Kruskal-Wallis tests.

Catalog Description

This paper provides hands-on experience in exploring and understanding various cognitive processes through practical conduction of tests and experiments. Students will engage in a series of practical sessions focusing on attention, problem-solving, memory, visual memory, and the Stroop test as per the description of the manual. Through these practical sessions, students will develop essential skills in experimental design, data collection, analysis, and interpretation within the field of psychology.

Course Objectives:

- To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
- To acquaint the students with the basic procedure and design of psychology experiments.
- To familiarize the students with the use of elementary statistical techniques.
- To encourage and guide the students to undertake a small-scale research project.

Course Outcomes:

By the end of the course, students will be able to:

- Demonstrate an understanding of fundamental cognitive processes including attention, memory, problem-solving, and executive functioning.
- Apply theoretical knowledge to the design, implementation, and analysis of cognitive psychology experiments.
- Develop practical skills in data collection, statistical analysis, and interpretation within the field of cognitive psychology.
- Critically evaluate research findings and their implications for understanding human cognition and behavior.
- Communicate scientific ideas and findings effectively through written reports and oral presentations.

This course aims to provide students with a comprehensive and practical understanding of cognitive psychology and personality principles, preparing them for further study and research in the field or applications in various professional domains.

Note: Out of the 6 practicals mentioned below, 4 practicals + 1 small-scale research project will be conducted in the third semester.

Course Contents:

1	Draw A Person Intellectual Ability Test	Intelligence
2	Swaroop Mehta Test of Thinking Strategy	Thinking
3	CVMT – CONTINUOUS VISUAL MEMORY TEST	Memory
4	PSAT – PROBLEM SOLVING ABILITY TEST	Problem Solving Ability
5	RETROACTIVE INHIBITION; EFFECTS OF INTERPOLATED ACTIVITIES ON P.L	Retroactive Inhibition.
6	STROOP EFFECT TEST*	Selective Attention

Note: Use group data for small-scale research project

DPSY2451	ABNORMAL PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides a comprehensive overview of abnormal psychology, focusing on the understanding, classification, and models of abnormal behaviour. Through exploration of various psychological disorders, including neurotic, mood, psychotic, and somatoform disorders, students will examine clinical presentations, etiology, and treatment approaches. Emphasis is placed on differentiating between normal and abnormal behaviour, as well as understanding the impact of psychological disorders on individuals and society.

Course Objectives:

1. To introduce students to the concept of abnormal behaviour and the criteria used for its definition and classification.
2. To familiarize students with recent versions of classification systems for psychological disorders, including the DSM (Diagnostic and Statistical Manual of Mental Disorders) and ICD (International Classification of Diseases).
3. To differentiate between neurosis and psychosis and understand their clinical features and implications.
4. To explore various models of abnormality, including biological, psychodynamic, behavioural, and humanistic perspectives, and their applications in understanding psychological disorders.
5. To examine the clinical picture, etiology, and subtypes of anxiety disorders, including generalized anxiety disorder, obsessive-compulsive disorder, phobic disorders, and eating disorders.
6. To understand the clinical presentation, course, and treatment approaches for mood disorders, including depression and bipolar disorder.
7. To analyze the clinical features, etiology, and subtypes of psychotic disorders, focusing on schizophrenia, psychotic depression, and delusional disorders.
8. To explore somatoform disorders, including pain disorder, hypochondriasis disorder, and body dysmorphic disorder, and understand their psychological and physiological components.
9. To develop empathy, sensitivity, and ethical awareness in dealing with individuals experiencing psychological distress or disorders.

Course Outcomes:

By the end of the course, students will be able to:

1. Define and differentiate between normal and abnormal behaviour based on established criteria.
2. Critically evaluate the utility and limitations of classification systems such as the DSM and ICD in diagnosing psychological disorders.
3. Identify and explain the clinical features and etiology of neurotic and psychotic disorders.
4. Analyse and apply different models of abnormality in understanding psychological disorders.
5. Describe the clinical presentation, etiology, and treatment approaches for various anxiety disorders, mood disorders, psychotic disorders, and somatoform disorders.
6. Demonstrate an understanding of the impact of psychological disorders on individuals, families, and society.
7. Apply ethical principles and sensitivity in discussing and addressing issues related to abnormal behaviour and psychological disorders.
8. Collaborate effectively in group discussions and activities related to understanding and analysing psychological disorders.

DPSY2401	PERSONALITY	L	T	P	FW/ Proj	C
Version	**2023**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Personality Psychology delves into the complex and fascinating study of personality, exploring the enduring patterns of thoughts, emotions, and behaviors that characterize individuals. This course provides a comprehensive overview of the major theories and research methods in personality psychology, examining how personality develops, is assessed, and influences various aspects of life. Students will engage with diverse theoretical perspectives, including psychoanalytic, trait, biological, humanistic, behavioral, cognitive, and social-cognitive approaches, and will critically analyze and compare these theories. The course also discusses the Nature-Nurture role in the development of Personality.

Course Objective:

1. To introduce students to the foundational concepts and historical development of personality psychology.
2. To familiarize students with different theoretical approaches used to study personality, including psychoanalytic, cognitive, social, learning, and humanistic perspectives.
3. To explore key trait theories proposed by influential psychologists such as Allport, Cattell, and Eysenck, and understand their implications for understanding individual differences.
4. To provide students with practical knowledge of personality assessment techniques, including self-report questionnaires and projective measures.
5. To critically analyze the role of biological, environmental, and socio-cultural factors in shaping personality development.
6. To encourage students to apply theoretical concepts and assessment tools to real-world contexts, such as understanding the impact of parenting styles on personality development.

Course Outcome: By the end of the course, students will be able to:

1. Demonstrate an understanding of the historical and conceptual foundations of personality psychology.
2. Evaluate and compare different theoretical approaches to the study of personality, identifying their strengths and limitations.
3. Apply key concepts from trait theories to analyze and interpret individual differences in personality.
4. Utilize various personality assessment techniques to gather and analyze data effectively.
5. Critically evaluate the relative contributions of genetic, environmental, and socio-cultural factors to personality development.
6. Communicate insights and findings related to personality psychology through written assignments, presentations, and class discussions.
7. Apply theoretical knowledge to practical scenarios, demonstrating an understanding of how personality theories can inform real-world applications such as counseling, education, and organizational psychology.

DPSY2402	CLINICAL PSYCHOLOGY PRACTICALS-IV	L	T	P	FW/ Proj	C
Version	**2023**	0	0	2	0	1
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course focuses on the assessment tools and techniques used in diagnosing and evaluating autism spectrum disorder (ASD) and related developmental disorders. Students will explore a range of assessment instruments, including checklists, questionnaires, personality inventories, and cognitive tests commonly used in clinical and educational settings. Special emphasis is placed on understanding the administration procedures, interpretation guidelines, and ethical considerations associated with assessing individuals with ASD. Additionally, students will learn about the Seguin Form Board Test, a measure of intelligence, and the Rey Auditory Verbal Learning Test, which assesses memory and learning abilities.

Course Objectives:

In this semester students will learn about abnormal psychology and personality and thus the tests are chosen for:

1. To familiarize with the assessment process for Autism Spectrum Disorder (ASD) and related developmental disorders.
2. To introduce a variety of assessment tools used in diagnosing and evaluating ASD, including checklists, questionnaires, and personality inventories.
3. To provide an understanding of the administration procedures, scoring methods, and interpretation guidelines for ASD assessment instruments.
4. To equip with the knowledge and skills necessary to administer and interpret cognitive tests, such as the Seguin Form Board Test, in the assessment of individuals with ASD.
5. To introduce the Rey Auditory Verbal Learning Test and its application in assessing memory and learning abilities in individuals with ASD.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Demonstrate a comprehensive understanding of the assessment process for Autism Spectrum Disorder and related developmental disorders.
2. Identify and select appropriate assessment tools based on the specific needs and characteristics of individuals with ASD.
3. Interpret assessment results effectively, taking into account individual differences, cultural considerations, and ethical guidelines.
4. Apply knowledge of cognitive testing procedures to assess intellectual functioning in individuals with ASD using the Seguin Form Board Test.
5. Utilize the Rey Auditory Verbal Learning Test to evaluate memory and learning abilities in individuals with ASD.
6. Critically evaluate assessment practices and make evidence-based decisions in the diagnosis and treatment planning for individuals with ASD.

DPSY2551	DEVELOPMENTAL PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Developmental Psychology examines the psychological and emotional changes throughout the human life span, from conception to old age. The course covers physical, cognitive, affective, moral, social, and neural development, emphasizing the roles of heredity, maturation, and environment. Students will explore key theories, cultural influences on child-rearing and attachment, developmental disorders, and the challenges of aging, with a focus on Indian and global perspectives.

Course Objectives

Developmental psychology, also known as human development, is the scientific study of systematic psychological changes, and emotional changes that occur in human beings over the course of their life span. Originally concerned with infants and children, the field has expanded to include adolescence, adult development, aging, and the entire life span. Developmental psychology course will provide enriching understanding of various child rearing practices, attachment styles across different cultures. Moreover, students will attain knowledge regarding challenges in human development through the understanding of various developmental disorders. The objective of this paper is:

1. To provide an understanding of Physical, cognitive, affective, moral, social and neural development during infancy, childhood, and adolescence.
2. To critically evaluate the role of heredity, maturation, and the environment in development.

To critically examine the influence of different cultural practices in development.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Understand Developmental Stages: Grasp physical, cognitive, affective, moral, social, and neural development in infancy, childhood, and adolescence.
2. Analyze Theoretical Frameworks to evaluate Freud's psychosexual stages, Erikson's psychosocial theory, and Bronfenbrenner's ecological model.
3. Explore Cognitive and Moral Development to understand Piaget's and Vygotsky's theories and Kohlberg's moral development stages.
4. Evaluate Cultural Influences to examine child-rearing practices and attachment styles across cultures, with a focus on Indian and global contexts.
5. Identify Developmental Disorders to learn about nervous system-related, degenerative, and sensory-related developmental disorders.
6. Understand Aging and Its Challenges to define types of aging, analyze aging theories, and explore challenges and interventions for the elderly.

Course Content:

Catalog Description

This course explores the role health in the overall wellbeing of an individual. This course describe various methodologies, that affect the health and illness relationship. Health psychology introduce the various perspective of happiness and well-being including the eastern perspectives. The course is theoretically driven, as it help in predicting health behavior in light of many health behavior related theories.

Course Objectives:

1. To provide students with a comprehensive understanding of health psychology, including its definition, methodologies, and the role of health psychologists in promoting wellness and addressing psychological factors related to health and illness.
2. To explore Eastern perspectives of happiness and well-being, including concepts such as Shunyata, Ananda, and Shatchitananda, and how these perspectives influence conceptualizations of health in Indian traditions.
3. To examine the psycho-neuro-immunological aspects of the immune system, including its functioning, disorders, and the psychological factors influencing immune health, such as stress and coping mechanisms.
4. To introduce theoretical foundations for predicting health behavior, including attribution theory, health locus of control, and various cognitive and social cognition models such as the health belief model and the theory of planned behavior.
5. To discuss health-enhancing behaviors and factors influencing healthcare utilization, including inequalities in healthcare access, doctor-patient communication, and burnout among healthcare professionals.
6. To emphasize the importance of a bio-psycho-social model of health, integrating biological, psychological, and social factors in understanding health and illness.
7. To analyze future challenges and trends in healthcare and the role of health psychology in addressing these challenges, including the growth of telemedicine and the importance of designing healthcare environments conducive to well-being.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Understand and articulate the foundational principles and major theoretical frameworks in Health Psychology.
2. Comprehend how psychological, social, and biological factors interact to influence health and illness.
3. Recognize and apply psychological methods to promote healthy behaviors and prevent illness.
4. Evaluate the psychological effects of chronic illness on individuals and families, and understand effective coping mechanisms.
5. Develop, implement, and assess interventions aimed at improving health outcomes and enhancing the quality of life.
6. Use research skills to investigate health psychology questions and contribute to the scientific understanding of health and illness.

DPSY2502	CLINICAL PSYCHOLOGY PRACTICALS-V	L	T	P	FW/ Proj	C
Version	**2023**	0	0	2	0	1
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides hands-on experience with the methods and techniques used in psychological research and assessment. Students will engage in practical exercises that cover various aspects of psychology, including cognitive, developmental, social, and clinical psychology. This course aims to develop students' skills in designing experiments, collecting and analyzing data, and interpreting results.

Course Objectives

- To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
- To acquaint the students with the basic procedure and design of psychology experiments.
- To familiarize the students with the use of elementary statistical techniques
- To encourage and guide the students to undertake a small-scale research project.

Course Outcomes (COs):

On completion of this course, the students will be able to: -

- Develop hypotheses, design experimental procedures, and carry out research studies in various areas of psychology.
- Gain proficiency in administering, scoring, and interpreting psychological tests and assessments.
- Apply statistical methods to analyze data collected from psychological experiments and assessments and interpret the results accurately.
- Understand and adhere to ethical guidelines in the conduct of psychological research and assessment.

Note: Total 5 practicals will be conducted in the Fifth semester among the list of following practicals out of which first three practicals are compulsory.

Course Content:

1	PGI General Wellbeing Measure	Health
2	Child Behavior Checklist (CBCL)	Developmental
3	Malin's Intelligence Scale for Indian Children- 2	Developmental
4	Creativity Assessment Packet	Positive
5	Behaviour Rating Inventory of Executive Function Adult Form	Developmental
6	Suicidal Ideation Questionnaire	Positive

DPSY2503	POSITIVE PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Positive Psychology is the scientific study of the strengths and virtues that enable individuals and communities to thrive. It is based on the belief that people want to lead meaningful and fulfilling lives, to cultivate what is best within themselves, and to enhance their experiences of love, work, and play. This course explores the principles and practices that promote well-being, happiness, and resilience. Students will learn about the theories and research underpinning positive emotions, strengths, and virtues, and how these can be applied to improve personal and societal well-being.

Course Objectives

1. To introduce students to the field of positive psychology, providing a historical overview and comparing Eastern and Western perspectives on well-being and positive emotional states.
2. To explore theories of positive emotions, including the Broaden & Build Theory, and examine concepts such as love, empathy, emotional intelligence, happiness, wellbeing, and resilience in the face of challenges and loss.
3. To delve into theories of positive cognitive states, including optimism, hope, wisdom, flow, mindfulness, and self-efficacy, and their implications for personal growth and development.
4. To highlight the importance of goals and character strengths in fostering positivity and developing a positive personality, drawing on frameworks such as the Values in Action (VIA) classification of character strengths and virtues.
5. To discuss preventive strategies and applications of positive psychology, including positive thinking, meditation, gratitude, kindness, and positive therapy, and their roles in enhancing various domains of life such as relationships, family, education, and health.
6. To examine the concept of aging, including definitions, types, and theories of aging, and to explore challenges faced by the elderly population and potential interventions to promote well-being and quality of life in later stages.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Define key concepts and theories in Positive Psychology: Understand and articulate the foundational principles and major theoretical frameworks in Positive Psychology.
2. Understand the scientific basis of well-being and happiness: Comprehend the research methodologies and empirical findings related to positive emotions, strengths, and virtues.
3. Apply positive psychological interventions: Utilize evidence-based strategies to enhance personal well-being and foster positive relationships.
4. Develop resilience and coping strategies: Learn and implement techniques to build resilience and effectively manage stress and adversity.
5. Promote well-being in various settings: Design and evaluate programs aimed at increasing well-being in personal, educational, and organizational contexts.
6. Critically evaluate Positive Psychology research and its applications: Analyze and assess the strengths and limitations of Positive Psychology studies and their practical implications.

DPSY2504	PHYSIOLOGICAL PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Physiological Psychology, also known as Biopsychology or Behavioral Neuroscience, is the study of the biological bases of behavior. This course examines the structure and function of the nervous system, exploring how brain activity and neurotransmission influence behaviors, thoughts, and emotions. Topics include neural communication, sensory and motor systems, regulatory behaviors, emotions, learning and memory, and psychological disorders from a biological perspective. Through this course, students will gain an understanding of how physiological processes underpin complex behaviors and mental functions.

Course Objectives:

 To provide students with a comprehensive understanding of physiological psychology, including its conceptual framework, methodologies, reductionism, and ethical considerations in research.
 To explore the structure and function of neurons, including impulse conduction, synaptic transmission, and the role of neurotransmitters in neural communication.
 To examine the basic subdivisions of the nervous system, including the peripheral and central nervous systems, and their respective roles in physiological processes.
 To investigate hemisphere function, focusing on cortical lobes (frontal, parietal, and temporal) and their functions, as well as hemispheric specialization and the role of the corpus callosum in interhemispheric communication.
 To discuss the neurobiological basis of learning and memory, including neuropathologies such as anterograde and retrograde amnesia, dementia, Alzheimer's disease, and Korsakoff's syndrome.
 To examine the concept of arousal, physiological measures of arousal such as EEG brain waves, the role of the reticular formation in central arousal, and the functions of sleep, including REM and non-REM sleep stages, as well as other biological rhythms and the influence of endocrine glands.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Understand and articulate the foundational principles and major theoretical frameworks in Physiological Psychology.
2. Understand the structure and function of the nervous system.
3. Describe how neural mechanisms and neurotransmission influence various behaviors, including sensory processing, motor control, and emotional regulation.
4. Utilize techniques such as brain imaging, electrophysiology, and pharmacology to investigate psychological phenomena.
5. Evaluate the interactions between different brain regions and their impact on cognition, learning, memory, and psychological disorders.

SEMESTER-VI

DPSY2601	CLINICAL PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Clinical Psychology integrates science, theory, and clinical knowledge to understand, prevent, and alleviate psychological distress while promoting well-being and personal development. This course provides students with a comprehensive foundation in clinical psychology, covering historical and contemporary issues, ethical and legal considerations, classification systems, diagnostic techniques, and psychotherapy. Emphasizing practical skills and ethical awareness, the course prepares students for professional practice and specialized areas of psychological services, fostering self-reflective skills and academic growth.

Course Objectives

Clinical Psychology is an integration of science, theory and clinical knowledge for the purpose of understanding, preventing, and relieving psychologically based distress or dysfunction and to promote subjective well-being and personal development. In many countries, clinical psychology is a regulated mental health profession. Keeping pace with the disciplinary advances and with the goal of acquiring specialized knowledge, the paper would allow students to nurture their academic interest in clinical and other research domains of psychology, along with personal growth and citizenship. The faculty is expected to perform the following functions so that the objective of the concerned programme can be obtained:

- Integrate the course contents with the clinical viewpoint in a service setting.
- To train them into skills and competencies which are required for practice as a psychologist.
- To sensitize them to the ethics of profession.
- To impart knowledge and skills required for diagnosis of psychopathological conditions.
- To prepare students in specific areas in which professional psychological services can be rendered.
- To develop self-reflective skills.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Gain knowledge about the meaning, nature, and historical development of clinical psychology.
2. Explore the professional activities, subspecialties, and organizational roles within clinical psychology, along with the ethical and legal issues involved.
3. Learn about current classification systems, their uses, and limitations in diagnosing psychological disorders.
4. Develop skills in clinical diagnosis and assessment, including case studies, mental state examinations, and various clinical interview methods.
5. Acquire knowledge about the definition, goals, stages, and essential processes of psychotherapy, preparing for effective therapeutic interventions.

DPSY2602	GENDER PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Gender Psychology explores psychological theories and research on gender differences and similarities, focusing on the effects of gender in social contexts. This course examines the complexity and diversity of gendered experiences across cultures, covering biological, sociocultural, and historical determinants of sex and gender. Students will study various psychological perspectives on gender, gender roles and stereotypes, intellectual and physical abilities across the gender spectrum, and the impact of gender on health and well-being. The course aims to provide a nuanced understanding of gender dynamics in contemporary society.

Course Objectives

1. To introduce students to the field of gender psychology, providing an understanding of the determinants of sex and gender, including biological and sociocultural factors, and examining the contemporary understanding of gender spectrum in both informal and formal communication.
2. To explore the historical antecedents of the concept of gender usage in psychology.
3. To analyze gender from various psychological perspectives, including Freudian and Neo-Freudian theories, Social Learning Theory, and Gender Schema Theory.
4. To examine gender roles and stereotypes, including concepts of masculinity and femininity, and explore the religious, cultural, economic, and media contexts that influence the construction and perpetuation of gender stereotypes.
5. To explore the potential across the gender spectrum, including intellectual and cognitive abilities in STEAM fields, physical abilities and sports achievements, creativity, and the unique abilities and challenges faced by neurodivergent individuals across genders.
6. To understand the intersection of gender and health, including factors determining health and fitness, gender dysphoria, and the impact of stress, coping mechanisms, and psychopathology on gendered experiences of health and well-being.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Comprehend the determinants of sex and gender, including biological and sociocultural factors, and the historical development of gender concepts in psychology.
2. Evaluate Freudian, Neo-Freudian, Social Learning, and Gender Schema theories to understand gender from various psychological viewpoints.
3. Investigate gender stereotypes and roles within religious, cultural, economic, and media contexts, focusing on the concepts of masculinity and femininity.
4. Assess intellectual, cognitive, and physical abilities across the gender spectrum, including achievements and challenges in STEAM fields, sports, art, and creativity, with a special focus on neurodivergent populations.
5. Analyze factors affecting health and fitness, gender dysphoria, and the relationship between gender, stress, coping mechanisms, and psychopathology.

DPSY2651	GUIDANCE AND COUNSELLING PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Guidance and Counselling Psychology explores the theories, principles, and practices involved in assisting individuals to overcome personal, social, educational, and vocational challenges. This course delves into the application of psychological theories and techniques to promote holistic well-being, enhance personal development, and facilitate effective decision-making. Topics include counselling theories, assessment methods, ethical considerations, multicultural competence, and interventions aimed at fostering psychological resilience and growth. Through experiential learning, students develop essential counselling skills, including active listening, empathy, rapport-building, and goal-setting, to support individuals in navigating life transitions and achieving their fullest potential."

Course Objectives

The objective of this course is to provide a comprehensive understanding of guidance and counselling in educational settings. It aims to equip participants with the knowledge and skills necessary to effectively support individuals in achieving personal, social, educational, and career goals. It concentrates on the importance of counsellors and of the multicultural, ethical and legal environments in which counsellors operate. This paper focuses on the context and process of counselling to provide a range of high quality and responsive counselling skills and its applications to help oneself and others. The current discipline will enable the students to develop an understanding of counselling within school setup, which is collaborative work of counsellor and other school staff.

Course Outcome:

On completion of this course, students will be able to:

1. Understand the definition and significance of guidance and counselling.
2. Identify the goals and characteristics of effective counselling.
3. Recognize the importance of guidance and counselling in school settings.
4. Differentiate between guidance, counselling, and psychotherapy.
5. Understand the structure and phases of the counselling process.
6. Develop skills for building and maintaining effective counselling relationships.
7. Learn techniques for working through counselling sessions and terminating the relationship appropriately.
8. Master verbal and non-verbal communication techniques essential for effective counselling.
9. Explore theoretical approaches in counselling, including psychoanalytic, behavioristic, cognitive-behavioral, and humanistic/existential approaches.
10. Examine current issues, ethical considerations, and legal standards in counselling practice, as per the American Psychological Association (APA) guidelines.

DPSY2603	ORGANIZATIONAL BEHAVIOUR	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Organizational Behavior explores the dynamics of individual, group, and organizational behavior within the context of various workplace settings. This course examines theories, research findings, and practical applications relevant to understanding human behavior in organizations. Topics may include individual differences, motivation, communication, leadership, decision-making, teamwork, organizational culture, and change management. Through case studies, simulations, and experiential learning activities, students develop insights into how individuals and groups interact within organizations, and how these interactions influence organizational effectiveness and employee well-being. Emphasis is placed on developing practical skills for effective leadership, communication, conflict resolution, and organizational development.

Course Objectives

The course aims to provide a comprehensive understanding of Organizational Psychology, beginning with its concept, meaning, and historical evolution. It delves into the subject matter and functions of Organizational Psychology, covering areas such as work motivation, organizational attitude and behavior, leadership, and organizational culture. Through the exploration of both early and contemporary theories, students will gain insights into factors influencing work motivation, job satisfaction, and organizational commitment, as well as the dynamics of leadership and power within organizations. Additionally, the course examines the development, impact, and consequences of organizational culture, equipping students with the knowledge and analytical skills necessary to address organizational challenges effectively.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Demonstrate an understanding of the factors influencing individual behavior in organizations, personality, attitudes, motivation, and job satisfaction.
2. Analyze and evaluate group dynamics, including team formation, communication patterns, decision-making processes, and conflict resolution strategies.
3. 3.Uunderstand different types of organizational structures and their impact on communication, coordination, and decision-making within organizations.
4. Develop leadership and management skills, including the ability to identify different leadership styles, traits, and behaviors, and their effects on employee motivation and organizational performance.
5. Understand the process of organizational change, including the reasons for change, resistance to change, and strategies for managing change effectively.
6. Apply concepts and theories from organizational behavior to analyze and solve real-world organizational challenges, demonstrating their ability to apply theoretical knowledge to practical situations.

DPSY2604	ARTIFICIAL INTELLIGENCE AND CYBER-PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description:

The association between AI and Cyber-Psychology is essential for developing technologies that are both advanced and human centric. AI provides powerful tools for understanding and improving human behaviour, while Cyber-Psychology ensures that these technologies are used ethically and effectively. Together, they hold the potential to transform mental health care, enhance digital well-being, and create more supportive and engaging online environments. Their collaboration can lead to innovative solutions that address complex psychological and societal challenges, ultimately improving the quality of life in the digital age.

Course Objective:

Cyberpsychology is the field of psychology that investigates the impact of digital technology and online interactions on human behaviour and mental processes, exploring topics like internet addiction, online relationships, and digital well-being. AI, or Artificial Intelligence, refers to the development of computer systems that can perform tasks typically requiring human intelligence, such as problem-solving, decision-making, and natural language understanding.

This course has the following objectives.

- a comprehensive understanding of the psychological aspects of online behaviour, exploring topics such as internet addiction, toxic disinhibition, online identity, social media behaviour, social and professional networking online, cyberbullying, and some aspects of cybersecurity.
- Learners gain an applicatory know-how of psychological principles to address the challenges and opportunities arising from the digital world.
- Explore the complex issues surrounding gaming addiction, online behavioural misconduct, and cyberbullying. Understand the symptoms of internet and gaming addiction, the psychological implications of anonymity, and the types and forms of cyberbullying, along with strategies for prevention and legal interventions.
- Examine the evolving landscape of digital mental health and cognitive development, including the effectiveness and ethical considerations of cybertheory, the role of AI chatbots and virtual therapists, and the psychological aspects of online learning, critical thinking, memory, and digital amnesia.

Course Outcomes (COs):

- Students will learn key principles of cyber-psychology, such as online behavior, digital identity, and the psychological effects of internet use.
- They will explore case studies of AI applications in mental health, user experience, and online behavior monitoring.
- Students will understand the ethical considerations in AI development and deployment, including issues related to privacy, bias, and transparency.
- Students will learn how to use AI for behavioral analytics, understanding how to interpret data from digital footprints to make predictions about human behavior.

SEMESTER-VII

DPSY2701	ADVANCED STATISTICS (PARAMETRIC & NON-PARAMETRIC)	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides an in-depth exploration of advanced statistical methods and their applications in psychological research. Students will learn about various statistical techniques, including ANOVA, correlation, chi-square tests, regression analysis, and factor analysis. The course also introduces students to the use of SPSS and online platforms for statistical analysis. Emphasis is placed on understanding the concepts, assumptions, and applications of these methods, as well as interpreting and reporting results accurately.

Course Objectives

- Provide a comprehensive understanding of advanced statistical concepts and their applications in Psychology.
- Develop proficiency in identifying and applying different scales of measurement.
- Equip students with the skills to conduct and interpret hypothesis testing.
- Emphasize the importance of reliability and understanding the standard error of the mean.
- Teach the computation, interpretation, and application of ANOVA, correlation, chi-square tests, and regression analysis.
- Introduce factor analysis and its application in psychological research.
- Familiarize students with SPSS and online platforms for statistical analysis.

Course Outcomes (COs)

Upon successful completion of this course, students will be able to:

1. Define key statistical concepts and apply them in psychological research.
2. Accurately use and differentiate between nominal, ordinal, interval, and ratio scales of measurement.
3. Perform and interpret one-tailed and two-tailed hypothesis tests, understanding Type I and Type II errors.
4. Determine and evaluate the reliability of statistics in data analysis.
5. Understand and calculate the standard error of the mean.
6. Conduct and interpret two-way ANOVA, Friedman's two-way analysis, Wilcoxon Rank Sum Test, and Kolmogorov-Smirnov test.
7. Perform and interpret various types of correlation analyses, including Phi-Coefficient, Contingency Coefficient, and Tetrachoric.
8. Conduct and interpret Chi-Square Goodness of Fit and Chi-Square Test of Independence.
9. Conduct and interpret simple and multiple linear regression analyses.
10. Understand and apply factor analysis techniques.
11. Use SPSS and online platforms for conducting and interpreting statistical analyses.

DPSY2702	PSYCHOLOGICAL ASSESSMENT AND DIAGNOSIS	L	T	P	FW/ Proj	C
Version	**2023**	1	1	0	0	2
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description: This course provides an in-depth exploration of various psychological assessment tools and techniques used in clinical and educational settings. It covers the theoretical foundations, administration procedures, interpretation, and ethical considerations associated with a wide range of psychological tests, including intelligence tests, achievement tests, personality assessments, projective tests, and developmental scales. Special emphasis is placed on understanding the principles of test construction, bias, fairness, and emerging trends in online testing.

Course Objectives:

1. To familiarize students with the purpose, types, and ethical issues related to psychological testing.
2. To provide an understanding of the theoretical frameworks underlying cognitive, achievement, and personality assessments.
3. To introduce students to a variety of psychological assessment tools, including intelligence tests, achievement tests, personality inventories, and projective techniques.
4. To equip students with the necessary skills to administer, score, and interpret psychological tests accurately and ethically.
5. To enhance students' critical thinking skills regarding the selection and application of appropriate assessment measures based on client characteristics and assessment goals.
6. To explore emerging trends in online testing and their implications for psychological assessment practices.

Course Outcomes: By the end of the course, students should be able to:

1. Demonstrate a comprehensive understanding of the purpose, principles, and types of psychological tests.
2. Evaluate the validity, reliability, and fairness of psychological assessment instruments.
3. Administer, score, and interpret a variety of psychological tests, including intelligence tests, achievement tests, and personality inventories.
4. Identify and address ethical issues and considerations in psychological testing, including cultural and contextual factors.
5. Apply psychological assessment techniques effectively in diverse clinical and educational settings.
6. Critically analyze and synthesize assessment data to generate comprehensive psychological evaluation reports.
7. Adapt assessment strategies to meet the needs of individuals across the lifespan, including children, adolescents, and adults.
8. Stay informed about emerging trends and advancements in psychological assessment, particularly in the context of online testing platforms

DPSY2703	CLINICAL PSYCHOLOGY PRACTICALS-VII	L	T	P	FW/ Proj	C
Version	**2023**	0	0	4	0	2
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description:
This course is essential for students to pursue careers in clinical psychology, neuropsychology, health psychology, and related fields, providing them with the necessary tools and knowledge to conduct psychological assessments effectively. This practical course provides hands-on training in the administration, scoring, and interpretation of key psychological assessment tools used in clinical and research settings. Students will become proficient in using the ADHD Symptom Checklist, Clinical Analysis Questionnaire (CAQ), PGI Health Questionnaire, Psychological Diagnostic Screening Questionnaire, AIIMS Comprehensive Neuro Psychological Battery (Hindi), and Standard Progressive Matrices. Emphasis will be placed on understanding the theoretical underpinnings, psychometric properties, and practical applications of these tools. Additionally, students will learn about ethical considerations and cultural sensitivities in psychological testing.

Course Objective:

1. To demonstrate practical experience to the students in administering and scoring psychological tests andinterpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology tests.
3. To familiarize the students with the use of appropriate statistical techniques
4. To encourage and guide the students to undertake a small-scale research project.

Course Outcomes (COs):
On completion of this course, the students will be able to

- Proficiency in administering various psychological assessments.
- Ability to score and interpret assessment results accurately.
- Score and interpret the results of different standardized tools.
- Understand the theoretical background and practical applications of the tools.
- Discuss the psychometric properties and utility of the PGI Health Questionnaire in different contexts.
- This approach ensures that students gain hands-on experience with each assessment tool and understand their practical applications in real-world settings.

Note: Total 5 practicals will be conducted in the Fifth semester among the list of following practicals out of which first three practicals are compulsory.

Course Content:

1	ADHD Symptom Checklist	Neuropsychology
2	Clinical Analysis Questionnaire (CAQ)	Personality & Psychopathology
3	PGI Health Questionnaire	Health
4	Psychological Diagnostic Screening questionnaire	Diagnosis
5	AIIMS Comprehensive Neuro Psychological Battery (Hindi)	Neuropsychology
6	Standard Progressive Matrices	Intelligence

DPSY2704	NEUROPSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Neuropsychology provides an in-depth understanding of the brain and its various functions to elucidate its role in human behaviour. The course covers the historical background and emergence of neuropsychology, methods for studying brain structure and function, brain plasticity, and the specific roles of different brain lobes. Additionally, students will explore neuropsychological rehabilitation, including cognitive retraining and the role of family and community support, as well as the impact of social support on health. This comprehensive course integrates theoretical knowledge with practical assessment techniques.

Course Objectives:

1. To introduce students to the field of neuropsychology, providing a historical background and outlining the emergence of neuropsychology as a discipline, as well as exploring its scope in understanding brain-behavior relationships.
2. To familiarize students with various methods used in neuropsychology for measuring brain structure and function, including invasive techniques, electrical procedures, in-vivo imaging, and neuropsychological assessment tools.
3. To examine the plasticity of the brain from a neuropsychological perspective, focusing on the cerebral cortex and the localization and lateralization of functions within the brain.
4. To explore deficits associated with frontal, temporal, parietal, and occipital lobes, including behavioral, emotional, personality, and cognitive changes linked to each lobe's functions.
5. To understand the holistic approach to neuropsychological rehabilitation, including planning, process, and outcomes of cognitive retraining, and the role of family and community support in the rehabilitation process, as well as financial and employment rehabilitation.
6. To discuss the link between social support and health, exploring factors contributing to the personality and health link, different types of social support, and the cross-cultural perspectives on health and social support.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Gain knowledge of the historical background, emergence, and scope of neuropsychology as a discipline.
2. Learn about invasive and non-invasive techniques for measuring brain structure and function, including electrical procedures, in-vivo imaging, and neuropsychological assessments.
3. Explore the neuropsychological aspects of brain plasticity and the localization of functions within the cerebral cortex, including lateralization.
4. Examine the behavioral, emotional, personality, and cognitive changes associated with deficits in the frontal, temporal, parietal, and occipital lobes.
5. Understand the planning, process, and outcomes of cognitive retraining and the role of social support in rehabilitation. Learn to administer neuropsychological assessments such as the Bender Gestalt Test and Benton's Visual Retention Test.

DPSY2705	FORENSIC PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course offers an in-depth exploration of forensic psychology, focusing on its theoretical foundations, practical applications, and ethical considerations within the legal system. Students will examine the historical development of forensic psychology, legal structures, and the roles of forensic psychologists in various aspects of the legal process. Topics include competency and insanity, theories of criminal behavior, psychopathy, eyewitness testimony, and the intersection of mental health and the criminal justice system. Through lectures, discussions, and case studies, students will gain insight into the complexities of forensic psychology and its relevance in legal settings.

Course Objective:

1. To provide students with a comprehensive understanding of forensic psychology, including its historical development, theoretical underpinnings, and practical applications within the legal system.
2. To familiarize students with the structure of the legal system and the roles of forensic psychologists in conducting evaluations, providing expert testimony, and assisting in legal decision-making processes.
3. To explore key concepts and issues related to competency and insanity, including the evaluation and treatment of individuals involved in legal proceedings.
4. To examine theories of criminal behavior and the phenomenon of psychopathy, including assessment methods and interventions for individuals with psychopathic traits.
5. To analyze factors influencing eyewitness testimony accuracy, lineup procedures, and the reliability of eyewitness memory in legal contexts.
6. To understand the relationship between mental illness and criminal behavior, including competency evaluations, insanity defense, and the challenges of addressing mental health needs within the criminal justice system.
7. To foster critical thinking and ethical awareness in applying forensic psychology principles to real-world scenarios, promoting the fair and just treatment of individuals within the legal system.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Demonstrate a comprehensive understanding of key concepts, theories, and practices in forensic psychology.
2. Explain the roles and responsibilities of forensic psychologists within the criminal justice system.
3. Perform psychological assessments to evaluate competency to stand trial, mental state at the time of an offense, risk of reoffending, and other legal considerations.
4. Assess and advise on the psychological impact of law enforcement practices on officers and suspects.

Course Content:

DPSY2706	PSYCHOTHERAPY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description:
This course offers a comprehensive exploration of psychotherapy theories and practices. Students will gain an in-depth understanding of major therapeutic approaches, including psychodynamic, cognitive-behavioral, humanistic, and integrative models. The course emphasizes the development of practical skills in conducting psychotherapy, understanding therapeutic processes, and applying evidence-based techniques. Students will also learn about the ethical and cultural considerations essential for effective therapy. Through lectures, role-plays, case studies, and supervised practice, students will be prepared as professional psychotherapists.

Course Objective:
1. To provide students with a comprehensive understanding of psychotherapy, including its meaning, nature, and scope, and to differentiate between psychotherapy and counselling.
2. To explore the variables affecting psychotherapy, and to understand their impact on the therapeutic process.
3. To examine the Indian perspective of psychotherapy, with a focus on spirituality and mindfulness.
4. To introduce students to a composite model of human effectiveness and the role of self-awareness in counselling, emphasizing personal characteristics that contribute to effective therapeutic practice.
5. To familiarize students with different genres of psychotherapy, and to discuss the advantages and limitations of individual versus group psychotherapy.
6. To examine psychoanalytic therapies, including Freud's psychoanalytic therapy, Jungian therapy, and Adlerian psychotherapy, through case studies and discussions of issues and clientele.
7. To introduce humanistic therapies such as client-centered expressive art therapy, emotion-focused therapy (EFT), motivational interviewing, and existential therapy, and to analyze their application, issues, and clientele through case studies.

Course Outcome:
By the end of this course, students will be able to:
- Understand and Compare Major Theoretical Approaches.
- Demonstrate basic psychotherapy skills, such as active listening, empathy, rapport-building, and effective questioning.
- Identify and apply ethical principles in psychotherapy, including confidentiality, informed consent, and professional boundaries.
- Use supervision and peer feedback to improve therapeutic skills and personal development as a therapist.

Course Content:

Catalog Description
This course aims to provide students with a comprehensive understanding of conducting ethical research, utilizing proper research methodologies, and effectively communicating research findings. The course includes a final project where students will write a Literature Review on a topic chosen in consultation with the teacher(s).

This course is designed to equip students with essential skills and knowledge to conduct ethical research, employ proper research methodologies, and effectively communicate scientific information (with focus on writing a literature review). The course will cover topics such as research design, data collection and analysis, research ethics, and science communication strategies. Through a combination of lectures, discussions, case studies, and practical exercises, students will develop a deeper understanding of the research process and its ethical implications.

Course Objectives
The objective of this course is to impart knowledge about various stages of research process, research ethics and different ways of research communication.

The aim of this course is to impart research skills to the beginners and help to improve the quality of research by the existing researchers. It also encompasses the understanding and application of appropriate research design, statistics, and the use of the computer for reference management, report writing, research paper writing and presentation. The course also introduces the key conceptual issues of each research method, as well as giving practical guidance. It covers the series of research methodology contents: from problem formulation, to design, to data collection, analysis, reporting and dissemination. The course has the dual aims of equipping students with conceptual understandings of current academic debates regarding different methods, and the practical skills to put those methods into practice.

Course Outcomes
On completion of this course, the students will be able to
CO1. Define criteria of good research, steps in research process, and data collection.
CO2. Identify different types of sampling and its purpose.
CO3. Conduct hypothesis testing for different types of samples and interpret the results.
CO4: Learn the importance of literature review, write research paper/thesis, use reference management software.

Course Content :

Module	Topic	**Blooms level***	Hours
1	**Research Methodology** Understanding the research process: From research questions to conclusions Types of research: Qualitative and quantitative research Exploratory, descriptive, experimental, and correlational studies Scientific Thinking: Subjective Vs. Objective Thinking Logical Reasoning: Inductive Vs. Deductive Reasoning Formulating research hypotheses and objectives Purpose of a good research, Criteria of good research	L1, L2	10

Catalog Description:
This course delves into the essential role of differential diagnostic techniques in psychological assessment. It emphasizes the importance of distinguishing between conditions with overlapping symptoms to arrive at accurate diagnoses. Students will explore a variety of methods including clinical interviews, psychometric testing, behavioural observations, and the integration of collateral information. The course is designed to equip students with the skills needed to systematically and ethically differentiate between potential psychological disorders, ensuring precise and effective treatment planning. Emphasis is placed on the application of scientific principles, understanding cultural contexts, and managing comorbid conditions, making this a comprehensive approach to modern psychological diagnostics.

Course Objectives
The main goal of this course is to provide students with a thorough understanding of differential diagnostic techniques within the context of psychological assessment. The objectives of this course are for students are:

1. To familiarize with the process of diagnosis and differential diagnosis in clinical assessment, including the use of case history, mental status examination, and rationale for psychological testing, as well as ethical considerations in assessment practices.
2. To introduce to assessment tools and techniques for evaluating cognitive functions.
3. To explore tests for differential diagnosis, including Rorschach Psychodiagnostics, tests for thought disorders such as the Color Form Sorting Test and Proverbs Test, and screening instruments like the Minnesota Multiphasic Personality Inventory and GHQ for detecting psychopathology.
4. To discuss tests for adjustment and personality assessment, including questionnaires and inventories such as the 16 Personality Factor Questionnaire, NEO-5 Personality Inventory, Eysenck's Personality Inventory, and self-concept/self-esteem scales, as well as projective tests like the Sentence Completion Test and Thematic Apperception Test.
5. To provide students with practical skills in administering, scoring, and interpreting various assessment tools, and to understand the limitations and strengths of each tool in clinical practice.
6. To emphasize the importance of culturally sensitive assessment practices and the integration of assessment findings into comprehensive clinical reports and treatment planning.

Course Outcomes (COs)
By the end of this course, students will be able to:

1. Articulate the principles and importance of differential diagnosis in psychological assessment.
2. Demonstrate proficiency in using various types of clinical interviews to gather diagnostic information.
3. Select and interpret appropriate psychometric tests to differentiate between similar psychological conditions.
4. Accurately observe and analyse behavioural data to support differential diagnosis.
5. Integrate information from diverse sources, including collateral reports and medical histories, to formulate accurate diagnostic conclusions.
6. Incorporate cultural and contextual factors into the differential diagnostic process to ensure fair and accurate assessments.
7. Identify and manage the presence of comorbid conditions during the diagnostic assessment.
8. Maintain ethical standards in collecting, interpreting, and reporting diagnostic data in psychological assessments.

Catalog Description
This course prepares students for professional roles in clinical psychology and counselling psychology by equipping them with essential assessment skills. This practical course guides students in the administration, scoring, and interpretation of key psychological assessments. The emphasis is on learning about different personality, intelligence, and neuropsychological assessment tools. Students will gain hands-on experience and develop the necessary skills to apply these tools in clinical settings.

Course Objective:
1. To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology experiments.
3. To encourage and guide the students to undertake a small-scale research project.
4. To apply the general concepts of psychology through experimentation and testing

Course Outcomes (COs):
On completion of this course, the students will be able to
- Develop skills in integrating assessment findings into clinical practice.
- Gain an understanding of ethical principles in psychological assessment.
- Administer the different scales to individuals.
- Knowledge of cultural and linguistic considerations in psychological testing.

Comprehend the psychometric properties and clinical applications of the tools

Note: Out of the 6 practicals mentioned below, 5 practicals will be conducted in the eighth semester.

Course Content:

1	Minnesta Multiphasic Personality Inventory (MMPI – 2	Personality
2	Neuropsychological Assessment Battery® (NAB®) Attention Module Kit	Neuropsychological Assessment
3	Reynolds Intellectual Assessment Scales (RIAS)	Intelligence
4	Detroit Tests of Learning Aptitude - Fourth Edition (DTLA-4)	Learning
5	Verbal learning Experiments: Serial Recall vs Parid associate recall	Verbal Learning Experiment
6	Sociometry Experiment	Interpresonal relationship and Group Dynamic

Catalog Description

Rehabilitation Psychology offers an in-depth exploration of the psychological principles, theories, and practices involved in assisting individuals with disabilities or chronic health conditions to achieve optimal functioning and well-being. This course examines the biopsychosocial aspects of disability, including the impact of physical, cognitive, emotional, and environmental factors on individuals' functioning and quality of life. Topics may include adjustment to disability, coping strategies, resilience, self-management skills, psychosocial interventions, and advocacy for disability rights. Through case studies, experiential learning activities, and discussions, students gain insight into the challenges faced by individuals with disabilities and develop the knowledge and skills necessary to support their rehabilitation and integration into society.

Course Objectives:

- To provide an in-depth understanding of the profession of Rehabilitation Psychology and its practices.
- To familiarize students with the history, growth, and scope of rehabilitation psychology, as well as various areas of specialization within the field. Additionally, the course seeks to equip students with the necessary knowledge and skills to assess impairments, disabilities, and handicaps, along with conducting evaluations of cognition, aptitudes, psychopathology, work/vocational abilities, and daily functioning.
- To introduce students to theoretical frameworks in health behavior and rehabilitation, including theories of health behavior change and intervention strategies for individuals and families affected by disabilities.
- To explore the dynamics of family reactions to disabilities, coping styles, and the role of family counseling, as well as coordination within multidisciplinary teams. It delves into the principles and practices of Community-Based Rehabilitation (CBR).
- To address ethical and policy issues pertinent to rehabilitation psychology, including rehabilitation ethics, relevant policies and acts.

Course Outcome:

By the end of this course, students should be able to:

1. Demonstrate a comprehensive understanding of the profession of Rehabilitation Psychology, including its history, growth, and scope.
2. Apply knowledge of assessment techniques to evaluate impairments, disabilities, and handicaps, as well as cognitive, vocational, and daily functioning abilities.
3. Analyze and apply theoretical frameworks in health behavior and rehabilitation to develop effective intervention strategies for individuals and families affected by disabilities.
4. Utilize behavior modification and cognitive therapies in rehabilitation contexts to facilitate positive outcomes for clients.
5. Understand and address the dynamics of family reactions to disabilities, employing appropriate coping strategies and family counseling techniques.
6. Collaborate effectively within multidisciplinary teams to provide holistic rehabilitation services.
7. Implement principles of Community-Based Rehabilitation (CBR) to promote inclusion and empowerment within communities.
8. Demonstrate awareness of ethical considerations and policies relevant to rehabilitation psychology practice, ensuring adherence to professional standards and regulations.

Course Content:

Catalog Description

Neurodevelopmental Disabilities offers an in-depth understanding of various neurodevelopmental conditions such as autism spectrum disorders, intellectual disabilities, and attention-deficit/hyperactivity disorder. The course provides comprehensive insights into the epidemiology, clinical features, diagnostic criteria, and interventions associated with these disabilities. Students will explore the complexities of these conditions, enhancing their ability to diagnose and treat individuals with neurodevelopmental disabilities, and develop a nuanced understanding of the challenges and support systems needed for effective management.

Course Objectives

The objective of this course is to provide a comprehensive understanding of neurodevelopmental disabilities, encompassing various conditions such as autism spectrum disorders, intellectual disabilities, and attention-deficit/hyperactivity disorder. Through in-depth study and analysis, students will explore the underlying causes, diagnostic criteria, and interventions associated with these disabilities.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Gain knowledge about various neurodevelopmental disabilities, including intellectual disabilities, learning disabilities, autism spectrum disorders, communication disorders, cerebral palsy, and myelomeningocele.
2. Understand the definitions, clinical features, diagnostic criteria, and treatment options for conditions within the autism spectrum, such as Autistic Disorder, Asperger's Disorder, Childhood Disintegrative Disorder, and Rett's Syndrome.
3. Learn about the definition, clinical features, comorbidities, and treatment of Attention Deficit and Hyperactivity Disorder (ADHD).
4. Understand the definitions, types, diagnostic criteria, comorbidities, and treatment strategies for various learning disabilities.
5. Gain insights into the definitions, clinical features, diagnostic methods, and treatment options for intellectual disabilities, and understand their impact on individuals and families.

Course Content:

Catalog Description

This course focuses on the psychological assessment of childhood pathology and the identification of exceptional children. It explores the developmental, behavioral, and emotional challenges that can affect children, as well as the characteristics and needs of children who are considered exceptional due to giftedness or disabilities. The course provides a comprehensive overview of the tools and techniques used to assess and diagnose various childhood disorders and exceptionalities. Students will learn to apply evidence-based approaches to assess childhood pathology, differentiate between typical and atypical development, and support children with special needs in educational and therapeutic settings. Emphasis is placed on integrating developmental theories, understanding the role of family and culture, and applying ethical practices in assessment.

Course Objectives

This course is designed to introduce students to various behavioural, intellectual, developmental, learning & mood disorders prominent among children. The course will give students detailed overview of the diagnostic criteria and etiology of these disorders amongst children along with psychotherapy and educational means of intervention for their training and counselling. Also, the course will provide students an opportunity to understand important concepts like neurodivergence, inclusive education and giftedness.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Gain a foundational understanding of normal and abnormal psychological development in children.
2. Learn to recognize and assess children with exceptional needs, including those who are gifted or have disabilities.
3. Become proficient in selecting and applying various psychological assessments tailored to children.
4. Develop skills in assessing developmental delays, learning disabilities, and behavioural disorders.
5. Apply developmental theories and models to understand and assess childhood pathology.
6. Understand the impact of family dynamics, cultural context, and environmental factors on child development and behaviour.
7. Adhere to ethical guidelines and standards when assessing and working with children and families.

Course Content:

This course provides a comprehensive guide to academic writing and research skills specifically tailored for students in psychological assessment. It covers the fundamentals of scholarly writing, including the development of clear and concise arguments, proper citation practices, and the structure of research papers. Additionally, the course delves into research methodologies, from designing and conducting studies to analysing and interpreting data. Emphasis is placed on fostering critical thinking, enhancing information literacy, and adhering to ethical standards in both writing and research. Students will learn to synthesize research findings, present their ideas effectively, and contribute to the field of psychology through well-crafted academic work.

Course Objectives

This course will introduce students to the domain of academic writing andits intricacies. The course seeks to impart knowledge about the styles of writing used in the current academic scenario. The course also familiarizes students with different types of academic writing and the latest APA manual.

The following are specific course objectives:

1.To identify different types of scientific articles from journal.

2.To know the appropriate style of scientific writing tocommunicate a topic or a finding effectively.

3.To present scientific findings in APA format and to follow APAguidelines in academic writing.

4.To understand the need to follow ethical standards in academic writing and to avoid practices such as plagiarism.

5. To learn ethical issues in using AI for research

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Gain a solid understanding of the conventions and styles of academic writing in psychology.
2. Learn to construct clear, coherent, and well-organized academic papers and reports.
3. Become proficient in using various citation styles (e.g., APA, MLA) and managing references effectively.
4. Develop skills to search for, evaluate, and synthesize scholarly literature in psychology.
5. Learn to design methodologically sound research studies, including formulating research questions, hypotheses, and selecting appropriate methodologies.
6. Gain competence in statistical analysis and interpretation of research data.
7. Understand and adhere to ethical guidelines in conducting and reporting research.
8. Cultivate the ability to critically evaluate research findings and theoretical perspectives.
9. Learn to effectively present research findings through written reports, presentations, and publications.

Course Content:

Modules	Blooms level*	Number of hours
Module – I: Introduction to Academic Writing A framework of the state of academic writing today and its significance; Distinct methods and procedures of academic writing for research synopsis and research publication	**L1, L2, L3**	18

The implosion of available data has made visualization more critical but also more challenging. Data analysis and Data Visualization are essential tools for business analysis, engineers, policymakers, and decision-makers. Developed originally for "small data", visualization techniques have been met with varied success in the past centuries and decades. There are a few well-known visualizations that are very effective in capturing the essence of the data, and of course, there are many infamous negative examples of poor visuals. An effective visual is critical for decision making it, but it also requires a lot of work, customization, attention to detail, and refinements.

Course Objectives

The course is designed to help students develop skills and knowledge in the following area(s):

- Develop an understanding of what is a good visualization for a given purpose
- Learn visualization theory & techniques
- Build a substantial data analytic project
- Apply data analysis and visualization with Excel, SPSS, R, Python, NVivo and MATLAB

Course Outcomes

On completion of this course, the students will be able to

CO1. Students will be able to articulate meaningful lines of inquiry that might be explored through the collection, organization, visualization, and analysis of data in a context associated with their primary field of study using (as appropriate) numerical, textual, spatial, and/ or visual data.

CO2. Student will understand what data are, how they are collected, and how to assess the quality/ reliability of data.

CO3. Students will demonstrate intermediate proficiency in the visualization of data to communicate information and patterns that exist in the data.

CO4: Students will be able to use at beginning level of proficiency the tools of statistics and machine learning to ask questions of and explore patterns in data.

Course Content :

Module	Topics Covered	Blooms Level	Contact Hours
1	**Module-1: Introduction to Excel** Data Analysis using Excel, Curve fitting, Correlation, Linear Regression, Multiple regression, Principal Component Analysis and Factor Analysis, Hypothesis testing **Introduction to Excel and SPSS** Introduction to SPSS and Types of Data, Importing, exporting and data handling in SPSS; Exploratory data analysis using SPSS and data visualization; Introduction to statistical inference and various univariate tests by using SPSS; Analysis of Variance (One Way ANOVA, Two Way ANOVA and ANCOVA); Correlation, Simple and Multiple linear Regression Analysis; Principal Component Analysis and Factor Analysis	L1, L2, L3, L4	20 hours
2	**Module-2: VOS Viewer** **Web of Science, Scopus, Dimensions, Lens, and PubMed.** Co-authorship networks, citation-based networks, and co-occurrence networks can be created based on data downloaded from Web of Science, Scopus, Dimensions, and Lens. Co-authorship	L1, L2, L3, L4	10 Hours

	networks and co-occurrence networks can also be created based on PubMed data. **Crossref, Europe PMC, and OpenAlex**. Networks can also be created based on data retrieved through the APIs of Crossref, Europe PMC, and OpenAlex, These APIs can be queried interactively in VOS viewer. **Semantic Scholar, Open Citations, and Wiki Data.** For a given set of DOIs, networks can also be created based on data retrieved through the APIs of Semantic Scholar, Open Citations and Wiki Data.		
3	**Faculty of Management Studies & Behavioural Sciences** **Module 3: Domain Specific Software** **- Structural Equation Modelling** **Smart PLS** Introduction to Structural Equation Modelling (SEM), Introduction to the software's AMOS and SPSS, SMART PLS, Testing of Statistical assumptions, Exploratory Factor Analysis (EFA), Confirmatory Factor Analysis (CFA), common method bias (CMB) test, Measurement Model Assessment, Discussing Fit Indices, Reliability and Validity Testing, Structural Model Assessment identifying multivariate outlier, Construct Validity: Convergent and Discriminant Validity, Measurement Model & Structural Equation Modelling, Mediation and Moderation Effects, Multi-Group Analysis.	L1, L2, L3, L4	30 Hours
	Faculty of Arts **N Vivo** 1. Import text, audio, video, emails, images, spreadsheets, online surveys, web content, and social media from various sources into a simple, intuitive interface. 2. Create and NVivo project, import and organise qualitative and quantitative data 3.Manage a literature review in NVivo 4. Autocode structured data deductively and identify themes inductively 5. Generate and falsify hypotheses 6. Combine data in sets for analysis 7. Seek patterns and identify relationships across codes and cases 8. Present findings using visualisations 9. Export data out of NVivo 10. Coordinate teamwork.

SEMESTER-I

DPSY2151	INTRODUCTION TO PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	2023	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course introduces the basics of psychology, covering its main theories, important terms, methods, and fields. It looks at the history of psychology from both Western and Indian perspectives, highlighting important contributions from different cultures and people therein. Students will learn about various schools of thought like Structuralism, Functionalism, Behaviorism, Gestaltism, Psychoanalysis, Humanism, Existentialism, and Cognitive Psychology. The course also explores different methods used in psychology, such as introspection, observation, experiments, interviews, questionnaires, and surveys. Additionally, it discusses key concepts and theories of learning, including Classical Conditioning, Operant Conditioning, and Insight Learning, as well as the idea of transfer of training. This course sets the stage for further study in psychology.

Course Objectives

This course is designed to introduce the science of psychology. It identifies and defines the theories, terms, methods, and various fields of psychology. This course can be used as a foundation towards continued education in more specific areas of psychology. General Psychology encourages students to study in depth the notions of modern scientific psychology. Upon completion of this course, student should have the following objectives:

- To know the major personalities important to the field of general psychology and the ideas, theories, and schools with which they are associated.
- To know the major terms associated with general psychology and their meanings.
- To know the major concepts associated with the area of general psychology.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. learn the main theories, concepts, and schools of thought in psychology, including both Western and Indian perspectives.
2. Identify important personalities in psychology and understand their ideas and theories.
3. Know how to use different psychological methods like introspection, observation, experiments, interviews, questionnaires, and surveys.
4. learn about various types of learning and key theories such as Classical Conditioning, Operant Conditioning, and Insight Learning.
5. Understand the concept of transfer of training, including its types and related theories.

DPSY2101	EXPERIMENTAL PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides an in-depth understanding of the scientific methods used in experimental psychology. Students will explore the history and steps of the experimental method, basic concepts of psychophysics, and sensory processes, including the structure and function of sensory organs. The course covers perceptual processes, focusing on how we perceive space, depth, and distance, and examines perceptual illusions. It also addresses the nature and theories of emotions and motivation. By the end of the course, students will be prepared for advanced studies in experimental psychology.

Course Objectives

The basic general objective of Experimental Psychology is to familiarize the student with a basic and broad understanding of the scientific method and its application to the problems of Psychology. The course focuses on the logic, principles and practices of modern science and how it is applied to understanding the nature of reality. Successful completion of this course will prepare the student for graduate work and advanced experimental concepts.

Course Outcomes (COs):

On completion of this course, the students will be able to

- learn the meaning, history, and steps of the experimental method, including psychophysics and threshold determination.
- Understand the types of senses and their functioning, such as vision, hearing, smell, taste, touch, temperature, pain, kinesthetic, and vestibular senses.
- Grasp the nature of perception, principles of perceptual organization, and concepts like space, depth, distance perception, and perceptual constancy, including illusions, delusions, and hallucinations.
- Learn about the nature and characteristics of emotions, bodily and physiological changes, and key theories of emotion.
- Understand the nature of motivation, motivational cycles, types of needs, drives, and incentives, and major theories of motivation.

Course Content:

Modules	Blooms level*	Number of hours
Module I Meaning and History of Experimental Psychology Steps of Experimental method Psychophysics: Basic Concepts, Stimulus and Differential Threshold Determination of Thresholds: Method of Limits, Method of Average Error, Method of Constant Stimuli	**L1, L2, L3**	18

DPSY2103	PRACTICALS-I	L	T	P	FW/ Proj	C
Version	**2023**	0	0	2	0	1
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides an overview of various psychological assessments and perceptual phenomena commonly encountered in psychological research and clinical practice. They will gain hands-on experience in using psychological tests, conducting experiments, and analysing data. They will also get a chance to explore different areas of psychology through practical activities. Students will explore a range of assessment tools and perceptual illusions, including the Muller-Lyer illusion, General Health Questionnaire, Emotional Maturity Scale, Peer Pressure Scale, Depth Perception assessments, and Mirror Drawing tasks. Through lectures, discussions, and hands-on activities, students will gain insight into the theoretical underpinnings, administration, interpretation, and practical applications of these assessments and perceptual phenomena. Emphasis will be placed on understanding the psychometric properties of assessment tools, as well as the implications of perceptual illusions for our understanding of human perception and cognition. This course aims to equip students with foundational knowledge and practical skills necessary for conducting psychological assessments and investigating perceptual processes in research and clinical settings.

Course Objectives

- To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
- To acquaint the students with the basic procedure and design of psychology experiments.
- To familiarize the students with the use of elementary statistical techniques.
- To encourage and guide the students to undertake a small-scale research project.

Course Outcome:

On completion of this course, the student will be able to

1. Learn how to give psychological tests to assess people's thoughts, feelings, and behaviour. They will also understand how to score these tests and interpret the results.
2. Understand the basics of designing psychology experiments. They will learn how to set up experiments and follow the right procedures.
3. Learn elementary statistical techniques to analyze data collected during experiments and tests.
4. Undertake their own small research projects. This will help them develop their research skills and explore topics of interest in psychology.

Note: Total of 6 practicals will be conducted in the first semester among the list of following practicals out of which the first three practicals are compulsory.

Course Content:

1.	Muller Lyre Illusion	Perception Illusion
2.	General Health Questionnaire	Psychiatric Disorder
3.	Emotional Maturity Scale	Emotional Intelligence

SEMESTER-II

DPSY2251	SOCIAL PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course offers a comprehensive introduction to the field of social psychology, examining how individuals' behaviors, thoughts, and feelings are shaped by social influences. It integrates empirical research, and real-world applications to explore the dynamics of human interaction and social influence.

Course Objectives:

- Understand and critically evaluate key theories and concepts in social psychology.
- Develop insights into how social factors influence individual behavior and mental processes.
- Apply social psychological principles to real-world issues and personal experiences.
- Conduct and analyze research in social psychology.
- Enhance skills in critical thinking, communication, and collaboration.

Course Outcomes:

By the end of this course, students will be able to:

- Articulate and summarize major theories and foundational concepts in social psychology, such as social cognition, social influence, and group dynamics.
- Understand the historical development and the evolution of social psychological thought.
- Apply social psychological theories to explain social behaviors and events in real-world contexts. Identify and analyze the cognitive and social factors that influence individual and group behavior in various situations.
- Utilize social psychological principles to develop strategies and interventions for reducing prejudice, discrimination, and intergroup conflict.
- Implement social psychological insights in everyday life and professional settings, such as in understanding and improving interpersonal relationships, workplace dynamics, and community interactions.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Introduction to Social Psychology Social Psychology: Meaning and Nature, Origin and Development. Methods and their Application: Experimental Method, Observation Method, Correlational Method, Interview and Questionnaire, Sociometry, Ethical Issues in Social Psychology Research	**L1, L2, L3**	18

DPSY2201	ELEMENTARY STATISTICS	L	T	P	FW/ Proj	C
Version	**2023**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description:
This course introduces the fundamental concepts and methods of Statistics as applied in behavioral science. Students will learn to quantify psychological data and understand and apply elementary statistical principles. The course emphasizes the logic of statistical reasoning and the practical application of statistical techniques to psychological research. Mastering these skills will prepare students to critically evaluate research findings and succeed in more advanced Psychology courses.

Course Objectives:
The paper on statistics introduces the quantification of psychological data and gives the students a primary research orientation. Understanding statistics and the basic logic of statistics is crucial to reading psychology research articles. Further, by mastering the basic logic and ways of thinking about Statistics, students will be unusually well prepared for the advanced courses. Below are the objectives of studying this paper on Psychology:

1. Understand how to accurately measure and quantify various psychological phenomena and data.
2. Gain primary research skills and orientation essential for conducting psychological research.
3. Develop a solid understanding of the basic logic and principles of Statistics, which is crucial for interpreting research findings.
4. Acquire the ability to critically read and comprehend psychology research articles that utilize statistical methods.
5. Build a strong foundation in Statistics that will prepare students for more advanced courses in Psychology and related fields.

Course Outcomes (COs):
By the end of this course, students will be:

1. Accurately quantify psychological data using appropriate statistical methods.
2. Develop a strong understanding of the basic logic and principles of Statistics, essential for interpreting research findings in Psychology.
3. Capable of critically reading and evaluating psychology research articles that employ statistical methods.

well-prepared for advanced Psychology courses that require a solid understanding of statistical concepts.

Course Content:

Modules	Blooms level*	Number of hours
Module 1 Meaning, Definition, Relevance and Limitations of Statistics in Psychology Categories of statistics: Descriptive and Inferential	**L1, L2, L3**	18

Prof. (Dr.) Anil Kumar

DPSY2203	PRACTICALS-II	L	T	P	FW/ Proj	C
Version	**2023**	0	0	2	0	1
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course introduces students to key psychological assessment tools for measuring various psychological constructs such as job satisfaction, aggression, college adjustment, leadership, social maturity, and attitudes toward home and family. Students will learn the principles of administering, scoring, and interpreting these scales. The course emphasizes the importance of these assessments in both research and applied settings and covers ethical considerations in the use of psychological tests.

Course Objectives

Below are the objectives of conducting practical this semester.

1. Provide an overview of various psychological scales and their applications.
2. Teach students how to administer and score different psychological assessments properly.
3. Develop skills to interpret the results of these assessments accurately.
4. Explain the psychological constructs measured by each scale.
5. Demonstrate the use of these tools in research and applied settings.
6. Highlight the ethical considerations in administering, scoring, and interpreting psychological assessments.

Course Outcomes (COs):

Upon successful completion of this course, students will be able to:

1. Describe various psychological assessment tools and their specific applications.
2. Administer the Job Satisfaction Scale, Aggression Questionnaire, College Adjustment Scale, Authentic Leadership Questionnaire, Vineland Social Maturity Scale, and Attitude Scale Towards Home and Family accurately.
3. Score these assessments reliably and accurately.
4. Interpret the results from these scales and understand their implications.
5. Explain the constructs measured by these scales, such as job satisfaction, aggression, adjustment, leadership, social maturity, and attitudes.
6. Apply these assessment tools in both research and practical settings.
7. Adhere to ethical guidelines in the administration, scoring, and interpretation of psychological assessments.
8. Effectively communicate assessment findings in both written and oral formats.

Course Contents:

1.	JOB SATISFACTION SCALE	Job Satisfaction
2.	AQ – AGGRESSION QUESTIONNAIRE	Aggression
3.	CAS – COLLEGE ADJUSTMENT SCALE	Adjustment
4.	ALQ – AUTHENTIC LEADERSHIP QUESTIONNAIRE	Leadership
5.	VSMS – VINELAND SOCIAL MATURITY SCALE	Social Maturity
6.	ATTITUDE SCALE TOWARDS HOME AND FAMILY	Attitude

Catalog Description

This course provides an in-depth exploration of key topics in cognitive psychology. Through lectures, discussions, and practical exercises, students will examine the theoretical foundations, empirical research, and practical applications of cognitive processes. Topics include attention processes, thinking, problem-solving, reasoning, decision-making, intelligence, memory, forgetting, language, and language disorders. Emphasis is placed on understanding the nature of cognition, its underlying mechanisms, and its implications for human behaviour.

Course Objectives:

1. To introduce students to the history, background, and foundational concepts of cognitive psychology.
2. To familiarize students with various theories and models related to attention processes, thinking, problem-solving, reasoning, decision-making, intelligence, memory, forgetting, language, and language disorders.
3. To enable students to critically analyse and evaluate research findings and theoretical perspectives in cognitive psychology.
4. To develop students' ability to apply cognitive psychology principles to real-world situations and problem-solving tasks.
5. To enhance students' understanding of the complexities of human cognition and its relevance to other disciplines such as education, neuroscience, and artificial intelligence.

Course Outcomes:

By the end of the course, students will be able to:

1. Describe the historical development and theoretical frameworks of cognitive psychology.
2. Identify different types of attention and factors influencing attentional processes.
3. Analyse various methods and stages of problem-solving and decision-making.
4. Evaluate theories of intelligence and their implications for understanding human cognition.
5. Discuss the nature and stages of memory, as well as factors affecting memory formation and retrieval. They will also recognize the causes and theories of forgetting and apply strategies to improve memory.
6. Define language and its components and identify common language disorders.
7. Apply cognitive psychology principles to analyse and solve real-world problems.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction, History, and Background of Cognitive Psychology	**L1, L2, L3**	18

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module II: Attention Processes Nature and Meaning of Attention Types of Attention Factors affecting Attention. Theories of Attention: Broadbent 's filter theory, Treisman's attenuation theory, automatic-controlled processing, and sensory integration theory	**L1, L2, L3**	18
Module III: Thinking, Problem-solving, Reasoning and Decision-making Nature, Types, and tools of thinking Meaning, Method, and stages of problem-solving Meaning and Types of Reasoning Meaning, types, and hindrances of decision making.	**L3, L4, L5**	18
Module IV: Intelligence Meaning, Nature of Intelligence Theories of intelligence: Unitary Theory, Two Factor Theory, Theory of primary mental abilities, Guilford's structure of intellect, Sternberg's, Tricirchy theory of intelligence, J.P Dass model of intelligence, Cattell's theory of intelligence. Genetic and Environmental Influence on Intelligence Types of Intelligence tests	**L3, L4, L5**	18
Module V: Memory & Forgetting Meaning and stages of memory Types of Memory, information-processing approach, Baddley- Hitch model of working memory. Methods of measuring memory Methods of improving memory Forgetting- Nature and causes of Forgetting. Theories of Forgetting	**L3, L4, L5, L6**	18

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	10	10	5	5	70

DPSY2301	RESEARCH METHODS & ADVANCED STATISTICS	L	T	P	FW/ Proj	C
Version	**2024**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course offers a comprehensive introduction to psychology's research methods and statistical techniques. Students will explore research design fundamentals, including experimental and non-experimental methods, and learn to differentiate between qualitative and quantitative research. The course covers the entire research process, from formulating questions and hypotheses to ethical considerations. Additionally, students will gain knowledge of sampling techniques and delve into both parametric and non-parametric statistical methods, enhancing their ability to analyse and interpret psychological data.

Course Objectives

1. Provide a foundational understanding of research and its various types in Psychology.
2. Equip students with the skills to navigate the research process, including formulating research questions and hypotheses.
3. Instil the importance of ethical considerations in conducting research.
4. Differentiate between experimental and non-experimental research designs and qualitative vs. quantitative methods.
5. Introduce various sampling techniques and concepts of population and sample.
6. Teach the basic differences and applications of parametric and non-parametric statistical methods.
7. Familiarize students with key statistical tests and their uses in psychological research.

Course Outcomes (COs)

On completion of this course, the students will be able to

1. Define research and describe different types of research used in Psychology.
2. Outline and implement the steps involved in the research process.
3. Identify and apply ethical principles in the design and conduct of psychological research.
4. Differentiate between experimental and non-experimental research, and between qualitative and quantitative research methods.
5. Develop clear and testable research questions and hypotheses.
6. Define and operationalize variables for research purposes.
7. Apply appropriate sampling techniques and determine suitable sample sizes for research studies.
8. Distinguish between parametric and non-parametric statistical methods, understanding their assumptions and appropriate uses.
9. Conducted and interpreted results from parametric tests such as t-tests, ANOVA, and correlation analyses.
10. Conducted and interpreted results from non-parametric tests such as the Mann-Whitney, Spearman rank-order, and Kruskal-Wallis tests.

DPSY2303	PRACTICALS-III	L	T	P	FW/ Proj	C
Version	**2023**	0	0	2	0	1
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides an in-depth exploration of various psychological assessment tools used to measure intellectual ability, thinking strategies, memory, problem-solving ability, self-concept, and attention. Students will examine the Draw-A-Person Intellectual Ability Test, Swaroop Mehta Test of Thinking Strategy, Continuous Visual Memory Test (CVMT), Problem Solving Ability Test (PSAT), Multidimensional Self-Concept Scale, and Brief Test of Attention (BTA). Through lectures, hands-on practice, and case studies, students will gain insight into the theoretical foundations, administration procedures, scoring methods, and interpretation of these assessment tools. Emphasis will be placed on understanding the psychometric properties, reliability, and validity of each test, as well as their applications in clinical, educational, and research settings. This course aims to equip students with the knowledge and skills necessary to effectively administer, interpret, and utilize psychological assessment tools for understanding cognitive processes, self-concept, and attentional functioning.

Course Objective:

1. To introduce students to a range of psychological assessment tools used to measure intellectual ability, thinking strategies, memory, problem-solving ability, self-concept, and attention.
2. To familiarize students with the theoretical foundations, administration procedures, scoring methods, and interpretation guidelines for each assessment tool.
3. To explore the psychometric properties, reliability, and validity of the assessment tools, and their applications in clinical, educational, and research settings.
4. To provide students with hands-on practice in administering and scoring the assessment tools, and interpreting the results to make informed decisions in various contexts.
5. To foster critical thinking and analytical skills in evaluating the appropriateness and effectiveness of different assessment tools for specific purposes and populations.

Course Outcome:

By the end of the course, students will be able to:

1. Demonstrate knowledge of the theoretical foundations and practical applications of various psychological assessment tools.
2. Effectively administer, score, and interpret the results of the Draw-A-Person Intellectual Ability Test, Swaroop Mehta Test of Thinking Strategy, CVMT, PSAT, Multidimensional Self-Concept Scale, and BTA.
3. Analyze the psychometric properties, reliability, and validity of assessment tools, and make informed decisions about their use in different settings.
4. Apply assessment results to understand cognitive processes, self-concept, and attentional functioning in individuals across different age groups and cultural backgrounds.
5. Critically evaluate the strengths and limitations of psychological assessment tools and make recommendations for their use based on empirical evidence and professional guidelines.

Note: Out of the 6 practicals mentioned below, 4 practicals + 1 small-scale research project will be conducted in the third semester.

SEMESTER-IV

DPSY2451	ABNORMAL PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides a comprehensive overview of abnormal psychology, focusing on the understanding, classification, and models of abnormal behaviour. Through exploration of various psychological disorders, including neurotic, mood, psychotic, and somatoform disorders, students will examine clinical presentations, etiology, and treatment approaches. Emphasis is placed on differentiating between normal and abnormal behaviour, as well as understanding the impact of psychological disorders on individuals and society.

Course Objectives:

1. To introduce students to the concept of abnormal behaviour and the criteria used for its definition and classification.
2. To familiarize students with recent versions of classification systems for psychological disorders, including the DSM (Diagnostic and Statistical Manual of Mental Disorders) and ICD (International Classification of Diseases).
3. To differentiate between neurosis and psychosis and understand their clinical features and implications.
4. To explore various models of abnormality, including biological, psychodynamic, behavioural, and humanistic perspectives, and their applications in understanding psychological disorders.
5. To examine the clinical picture, etiology, and subtypes of anxiety disorders, including generalized anxiety disorder, obsessive-compulsive disorder, phobic disorders, and eating disorders.
6. To understand the clinical presentation, course, and treatment approaches for mood disorders, including depression and bipolar disorder.
7. To analyze the clinical features, etiology, and subtypes of psychotic disorders, focusing on schizophrenia, psychotic depression, and delusional disorders.
8. To explore somatoform disorders, including pain disorder, hypochondriasis disorder, and body dysmorphic disorder, and understand their psychological and physiological components.
9. To develop empathy, sensitivity, and ethical awareness in dealing with individuals experiencing psychological distress or disorders.

Course Outcomes:

By the end of the course, students will be able to:

1. Define and differentiate between normal and abnormal behaviour based on established criteria.
2. Critically evaluate the utility and limitations of classification systems such as the DSM and ICD in diagnosing psychological disorders.
3. Identify and explain the clinical features and etiology of neurotic and psychotic disorders.
4. Analyse and apply different models of abnormality in understanding psychological disorders.
5. Describe the clinical presentation, etiology, and treatment approaches for various anxiety disorders, mood disorders, psychotic disorders, and somatoform disorders.
6. Demonstrate an understanding of the impact of psychological disorders on individuals, families, and society.
7. Apply ethical principles and sensitivity in discussing and addressing issues related to abnormal behaviour and psychological disorders.
8. Collaborate effectively in group discussions and activities related to understanding

DPSY2401	PERSONALITY	L	T	P	FW/ Proj	C
Version	**2023**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Personality Psychology delves into the complex and fascinating study of personality, exploring the enduring patterns of thoughts, emotions, and behaviors that characterize individuals. This course provides a comprehensive overview of the major theories and research methods in personality psychology, examining how personality develops, is assessed, and influences various aspects of life. Students will engage with diverse theoretical perspectives, including psychoanalytic, trait, biological, humanistic, behavioral, cognitive, and social-cognitive approaches, and will critically analyze and compare these theories. The course also discusses the Nature-Nurture role in the development of Personality.

Course Objective:

1. To introduce students to the foundational concepts and historical development of personality psychology.
2. To familiarize students with different theoretical approaches used to study personality, including psychoanalytic, cognitive, social, learning, and humanistic perspectives.
3. To explore key trait theories proposed by influential psychologists such as Allport, Cattell, and Eysenck, and understand their implications for understanding individual differences.
4. To provide students with practical knowledge of personality assessment techniques, including self-report questionnaires and projective measures.
5. To critically analyze the role of biological, environmental, and socio-cultural factors in shaping personality development.
6. To encourage students to apply theoretical concepts and assessment tools to real-world contexts, such as understanding the impact of parenting styles on personality development.

Course Outcome: By the end of the course, students will be able to:

1. Demonstrate an understanding of the historical and conceptual foundations of personality psychology.
2. Evaluate and compare different theoretical approaches to the study of personality, identifying their strengths and limitations.
3. Apply key concepts from trait theories to analyze and interpret individual differences in personality.
4. Utilize various personality assessment techniques to gather and analyze data effectively.
5. Critically evaluate the relative contributions of genetic, environmental, and socio-cultural factors to personality development.
6. Communicate insights and findings related to personality psychology through written assignments, presentations, and class discussions.
7. Apply theoretical knowledge to practical scenarios, demonstrating an understanding of how personality theories can inform real-world applications such as counseling, education, and organizational psychology.

Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides an in-depth examination of assessment tools commonly used in the evaluation of Autism Spectrum Disorder (ASD) and related behavioural and emotional issues in children and adolescents. Students will gain familiarity with a variety of assessment instruments, including checklists, questionnaires, and standardized tests designed to measure various aspects of ASD symptoms, addictive behaviours, personality traits, anger expression, and cognitive functioning. Emphasis is placed on understanding the administration procedures, interpretation guidelines, and ethical considerations associated with the use of these assessment tools.

Course Objectives:

1. To introduce students to the assessment process for Autism Spectrum Disorder (ASD) and related behavioural and emotional disorders in children and adolescents.
2. To familiarize students with a range of assessment instruments used in diagnosing and evaluating ASD symptoms, addictive behaviours, personality traits, anger expression, and cognitive functioning.
3. To provide students with an understanding of the administration procedures, scoring methods, and interpretation guidelines for each assessment tool.
4. To explore the ethical considerations and cultural factors involved in the assessment of children and adolescents with ASD and related disorders.
5. To equip students with the knowledge and skills necessary to administer and interpret the Rey Auditory Verbal Learning Test, a measure of memory and learning abilities.
6. To enhance students' critical thinking skills in selecting appropriate assessment tools and interpreting assessment results in the context of ASD and related disorders.
7. To foster effective communication skills for conveying assessment findings through written reports and oral presentations.

Course Outcomes: Upon completion of the course, students should be able to:

1. Demonstrate a comprehensive understanding of the assessment process for Autism Spectrum Disorder and related behavioural and emotional disorders in children and adolescents.
2. Identify and select appropriate assessment tools based on the specific needs and characteristics of the population being assessed.
3. Administer and score assessment instruments accurately and reliably, following standardized procedures and ethical guidelines.
4. Interpret assessment results effectively, taking into account individual differences, cultural considerations, and contextual factors.
5. Apply knowledge of cognitive testing procedures to assess memory and learning abilities in children and adolescents using the Rey Auditory Verbal Learning Test.

SEMESTER-V

DPSY2551	DEVELOPMENTAL PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Developmental Psychology examines the psychological and emotional changes throughout the human life span, from conception to old age. The course covers physical, cognitive, affective, moral, social, and neural development, emphasizing the roles of heredity, maturation, and environment. Students will explore key theories, cultural influences on child-rearing and attachment, developmental disorders, and the challenges of aging, with a focus on Indian and global perspectives.

Course Objectives

Developmental psychology, also known as human development, is the scientific study of systematic psychological changes, and emotional changes that occur in human beings over the course of their life span. Originally concerned with infants and children, the field has expanded to include adolescence, adult development, aging, and the entire life span. Developmental psychology course will provide enriching understanding of various child rearing practices, attachment styles across different cultures. Moreover, students will attain knowledge regarding challenges in human development through the understanding of various developmental disorders. The objective of this paper is:

1. To provide an understanding of Physical, cognitive, affective, moral, social and neural development during infancy, childhood, and adolescence.
2. To critically evaluate the role of heredity, maturation, and the environment in development.

To critically examine the influence of different cultural practices in development.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Understand Developmental Stages: Grasp physical, cognitive, affective, moral, social, and neural development in infancy, childhood, and adolescence.
2. Analyze Theoretical Frameworks to evaluate Freud's psychosexual stages, Erikson's psychosocial theory, and Bronfenbrenner's ecological model.
3. Explore Cognitive and Moral Development to understand Piaget's and Vygotsky's theories and Kohlberg's moral development stages.
4. Evaluate Cultural Influences to examine child-rearing practices and attachment styles across cultures, with a focus on Indian and global contexts.
5. Identify Developmental Disorders to learn about nervous system-related, degenerative, and sensory-related developmental disorders.
6. Understand Aging and Its Challenges to define types of aging, analyze aging theories, and explore challenges and interventions for the elderly.

DPSY2501	HEALTH PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	2	1	0	0	3
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course explores the role health in the overall wellbeing of an individual. This course describe various methodologies, that affect the health and illness relationship. Health psychology introduce the various perspective of happiness and well-being including the eastern perspectives. The course is theoretically driven, as it help in predicting health behavior in light of many health behavior related theories.

Course Objectives:

1. To provide students with a comprehensive understanding of health psychology, including its definition, methodologies, and the role of health psychologists in promoting wellness and addressing psychological factors related to health and illness.
2. To explore Eastern perspectives of happiness and well-being, including concepts such as Shunyata, Ananda, and Shatchitananda, and how these perspectives influence conceptualizations of health in Indian traditions.
3. To examine the psycho-neuro-immunological aspects of the immune system, including its functioning, disorders, and the psychological factors influencing immune health, such as stress and coping mechanisms.
4. To introduce theoretical foundations for predicting health behavior, including attribution theory, health locus of control, and various cognitive and social cognition models such as the health belief model and the theory of planned behavior.
5. To discuss health-enhancing behaviors and factors influencing healthcare utilization, including inequalities in healthcare access, doctor-patient communication, and burnout among healthcare professionals.
6. To emphasize the importance of a bio-psycho-social model of health, integrating biological, psychological, and social factors in understanding health and illness.
7. To analyze future challenges and trends in healthcare and the role of health psychology in addressing these challenges, including the growth of telemedicine and the importance of designing healthcare environments conducive to well-being.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Understand and articulate the foundational principles and major theoretical frameworks in Health Psychology.
2. Comprehend how psychological, social, and biological factors interact to influence health and illness.
3. Recognize and apply psychological methods to promote healthy behaviors and prevent illness.
4. Evaluate the psychological effects of chronic illness on individuals and families, and understand effective coping mechanisms.

Modules	Blooms level*	Number of hours

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module I: Introduction & Methodology Definition of Health Psychology; Mind-Body Relationship; Discuss the roles that health psychologists play in promoting wellness and in addressing and treating psychological factors related to health and illness, medical acceptance of health psychology	**L1, L2, L3**	18
Module II: Eastern perspectives of happiness and well-being, Concepts of Shunyata, Ananda, and Shatchitananda, Faith Healing traditions, conceptualizing Indian notions of Health.	**L1, L2, L3**	18
Module III: The Immune System Psycho-Neuro Immunology- the Immune System & immune functioning. Disorders of the Immune System- Infectious Diseases (viral infections & disease); Co-factor theory; Behavioral factors and common cold; AIDS (Transmission of HIV-AIDS & its consequences, coping with AIDS); Cancer-(Psychological factors in Cancer, causes of cancer)	**L3, L4, L5**	18
Module IV: Theoretical foundations: Predicting health behavior. Attribution theory, health locus of control, unrealistic optimism, stages of change model; Cognition models – health belief model, protection motivation theory; Social cognition models – theories of reasoned action and planned behavior, the health action process approach; Leventhal's self-regulatory model of illness cognition. Bio-Psycho-Social Model of Health	**L3, L4, L5**	18
Module V: Health Enhancing Behavior Inequalities in health care, using health services, the attitude of health professionals, doctor-patient communication, burnout in health professionals, designing health care work environment, future challenges for health care, and growth of health psychology.	**L3, L4, L5, L6**	18

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	10	10	5	5	70

DPSY2505	PRACTICALS-V	L	T	P	FW/ Proj	C
Version	**2023**	0	0	2	0	1
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides hands-on experience with the methods and techniques used in psychological research and assessment. Students will engage in practical exercises that cover various aspects of psychology, including health, developmental and positive psychology. This course aims to develop students' skills in designing experiments, collecting and analyzing data, and interpreting results.

Course Objectives

- To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
- To acquaint the students with the basic procedure and design of psychology experiments.
- To familiarize the students with the use of elementary statistical techniques
- To encourage and guide the students to undertake a small-scale research project.

Course Outcomes (COs):

On completion of this course, the students will be able to:

1. Develop hypotheses, design experimental procedures, and carry out research studies in various areas of psychology.
2. Gain proficiency in administering, scoring, and interpreting psychological tests and assessments.
3. Apply statistical methods to analyse data collected from psychological experiments and assessments and interpret the results accurately.
4. Understand and adhere to ethical guidelines in the conduct of psychological research and assessment.

Note: Total 5 practicals will be conducted in the Fifth semester among the list of following practicals out of which first three practicals are compulsory.

Course Content:

1	PGI General Wellbeing Measure	Health
2	Children Inventory of Anger	Developmental
3	Vineland Social Maturity Scale	Developmental
4	College Adjustment Scale-CAS	Health
5	Behaviour Rating Inventory of Executive Function Adult Form	Developmental
6	Suicidal Ideation Questionnaire	Positive

DPSY2503	POSITIVE PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Positive Psychology is the scientific study of the strengths and virtues that enable individuals and communities to thrive. It is based on the belief that people want to lead meaningful and fulfilling lives, to cultivate what is best within themselves, and to enhance their experiences of love, work, and play. This course explores the principles and practices that promote well-being, happiness, and resilience. Students will learn about the theories and research underpinning positive emotions, strengths, and virtues, and how these can be applied to improve personal and societal well-being.

Course Objectives

1. To introduce students to the field of positive psychology, providing a historical overview and comparing Eastern and Western perspectives on well-being and positive emotional states.
2. To explore theories of positive emotions, including the Broaden & Build Theory, and examine concepts such as love, empathy, emotional intelligence, happiness, wellbeing, and resilience in the face of challenges and loss.
3. To delve into theories of positive cognitive states, including optimism, hope, wisdom, flow, mindfulness, and self-efficacy, and their implications for personal growth and development.
4. To highlight the importance of goals and character strengths in fostering positivity and developing a positive personality, drawing on frameworks such as the Values in Action (VIA) classification of character strengths and virtues.
5. To discuss preventive strategies and applications of positive psychology, including positive thinking, meditation, gratitude, kindness, and positive therapy, and their roles in enhancing various domains of life such as relationships, family, education, and health.
6. To examine the concept of aging, including definitions, types, and theories of aging, and to explore challenges faced by the elderly population and potential interventions to promote well-being and quality of life in later stages.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Define key concepts and theories in Positive Psychology: Understand and articulate the foundational principles and major theoretical frameworks in Positive Psychology.
2. Understand the scientific basis of well-being and happiness: Comprehend the research methodologies and empirical findings related to positive emotions, strengths, and virtues.
3. Apply positive psychological interventions: Utilize evidence-based strategies to enhance personal well-being and foster positive relationships.
4. Develop resilience and coping strategies: Learn and implement techniques to build resilience and effectively manage stress and adversity.
5. Promote well-being in various settings: Design and evaluate programs aimed at increasing well-being in personal, educational, and organizational contexts.
6. Critically evaluate Positive Psychology research and its applications: Analyze and assess the strengths and limitations of Positive Psychology studies and their practical implications.

DPSY2504	PHYSIOLOGICAL PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Physiological Psychology, also known as Biopsychology or Behavioral Neuroscience, is the study of the biological bases of behavior. This course examines the structure and function of the nervous system, exploring how brain activity and neurotransmission influence behaviors, thoughts, and emotions. Topics include neural communication, sensory and motor systems, regulatory behaviors, emotions, learning and memory, and psychological disorders from a biological perspective. Through this course, students will gain an understanding of how physiological processes underpin complex behaviors and mental functions.

Course Objectives:

- To provide students with a comprehensive understanding of physiological psychology, including its conceptual framework, methodologies, reductionism, and ethical considerations in research.
- To explore the structure and function of neurons, including impulse conduction, synaptic transmission, and the role of neurotransmitters in neural communication.
- To examine the basic subdivisions of the nervous system, including the peripheral and central nervous systems, and their respective roles in physiological processes.
- To investigate hemisphere function, focusing on cortical lobes (frontal, parietal, and temporal) and their functions, as well as hemispheric specialization and the role of the corpus callosum in interhemispheric communication.
- To discuss the neurobiological basis of learning and memory, including neuropathologies such as anterograde and retrograde amnesia, dementia, Alzheimer's disease, and Korsakoff's syndrome.
- To examine the concept of arousal, physiological measures of arousal such as EEG brain waves, the role of the reticular formation in central arousal, and the functions of sleep, including REM and non-REM sleep stages, as well as other biological rhythms and the influence of endocrine glands.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Understand and articulate the foundational principles and major theoretical frameworks in Physiological Psychology.
2. Understand the structure and function of the nervous system.
3. Describe how neural mechanisms and neurotransmission influence various behaviors, including sensory processing, motor control, and emotional regulation.
4. Utilize techniques such as brain imaging, electrophysiology, and pharmacology to investigate psychological phenomena.
5. Evaluate the interactions between different brain regions and their impact on cognition, learning, memory, and psychological disorders.

SEMESTER-VI

DPSY2651	GUIDANCE AND COUNSELLING PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description:
Guidance and Counselling Psychology explores the theories, principles, and practices involved in assisting individuals to overcome personal, social, educational, and vocational challenges. This course delves into the application of psychological theories and techniques to promote holistic well-being, enhance personal development, and facilitate effective decision-making. Topics include counselling theories, assessment methods, ethical considerations, multicultural competence, and interventions aimed at fostering psychological resilience and growth. Through experiential learning, students develop essential counselling skills, including active listening, empathy, rapport-building, and goal-setting, to support individuals in navigating life transitions and achieving their fullest potential."

Course Objectives
The objective of this course is to provide a comprehensive understanding of guidance and counselling in educational settings. It aims to equip participants with the knowledge and skills necessary to effectively support individuals in achieving personal, social, educational, and career goals. It concentrates on the importance of counsellors and of the multicultural, ethical and legal environments in which counsellors operate. This paper focuses on the context and process of counselling to provide a range of high quality and responsive counselling skills and its applications to help oneself and others. The current discipline will enable the students to develop an understanding of counselling within school setup, which is collaborative work of counsellor and other school staff.

Course Outcome:
On completion of this course, students will be able to:

1. Understand the definition and significance of guidance and counselling.
2. Identify the goals and characteristics of effective counselling.
3. Recognize the importance of guidance and counselling in school settings.
4. Differentiate between guidance, counselling, and psychotherapy.
5. Understand the structure and phases of the counselling process.
6. Develop skills for building and maintaining effective counselling relationships.
7. Learn techniques for working through counselling sessions and terminating the relationship appropriately.
8. Master verbal and non-verbal communication techniques essential for effective counselling.
9. Explore theoretical approaches in counselling, including psychoanalytic, behavioristic, cognitive-behavioral, and humanistic/existential approaches.
10. Examine current issues, ethical considerations, and legal standards in counselling practice, as per the American Psychological Association (APA) guidelines.

DPSY2603	ORGANIZATIONAL BEHAVIOUR	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Organizational Behaviour explores the dynamics of individual, group, and organizational behaviour within the context of various workplace settings. This course examines theories, research findings, and practical applications relevant to understanding human behaviour in organizations. Topics may include individual differences, motivation, communication, leadership, decision-making, teamwork, organizational culture, and change management. Through case studies, simulations, and experiential learning activities, students develop insights into how individuals and groups interact within organizations, and how these interactions influence organizational effectiveness and employee well-being. Emphasis is placed on developing practical skills for effective leadership, communication, conflict resolution, and organizational development.

Course Objectives

The course aims to provide a comprehensive understanding of Organizational Psychology, beginning with its concept, meaning, and historical evolution. It delves into the subject matter and functions of Organizational Psychology, covering areas such as work motivation, organizational attitude and behaviour, leadership, and organizational culture. Through the exploration of both early and contemporary theories, students will gain insights into factors influencing work motivation, job satisfaction, and organizational commitment, as well as the dynamics of leadership and power within organizations. Additionally, the course examines the development, impact, and consequences of organizational culture, equipping students with the knowledge and analytical skills necessary to address organizational challenges effectively.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Demonstrate an understanding of the factors influencing individual behaviour in organizations, personality, attitudes, motivation, and job satisfaction.
2. Analyse and evaluate group dynamics, including team formation, communication patterns, decision-making processes, and conflict resolution strategies.
3. 3.Uunderstand different types of organizational structures and their impact on communication, coordination, and decision-making within organizations.
4. Develop leadership and management skills, including the ability to identify different leadership styles, traits, and behaviours, and their effects on employee motivation and organizational performance.
5. Understand the process of organizational change, including the reasons for change, resistance to change, and strategies for managing change effectively.
6. Apply concepts and theories from organizational behaviour to analyse and solve real-world organizational challenges, demonstrating their ability to apply theoretical knowledge to practical situations.

DPSY2604	ARTIFICIAL INTELLIGENCE AND CYBER-PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description:

The **association between AI and Cyber-Psychology** is essential for developing technologies that are both advanced and human centric. AI provides powerful tools for understanding and improving human behaviour, while Cyber-Psychology ensures that these technologies are used ethically and effectively. Together, they hold the potential to transform mental health care, enhance digital well-being, and create more supportive and engaging online environments. Their collaboration can lead to innovative solutions that address complex psychological and societal challenges, ultimately improving the quality of life in the digital age.

Course Objective:

Cyberpsychology is the field of psychology that investigates the impact of digital technology and online interactions on human behaviour and mental processes, exploring topics like internet addiction, online relationships, and digital well-being. AI, or Artificial Intelligence, refers to the development of computer systems that can perform tasks typically requiring human intelligence, such as problem-solving, decision-making, and natural language understanding.

This course has the following objectives.

- a comprehensive understanding of the psychological aspects of online behaviour, exploring topics such as internet addiction, toxic disinhibition, online identity, social media behaviour, social and professional networking online, cyberbullying, and some aspects of cybersecurity.
- Learners gain an applicatory know-how of psychological principles to address the challenges and opportunities arising from the digital world.
- Explore the complex issues surrounding gaming addiction, online behavioural misconduct, and cyberbullying. Understand the symptoms of internet and gaming addiction, the psychological implications of anonymity, and the types and forms of cyberbullying, along with strategies for prevention and legal interventions.
- Examine the evolving landscape of digital mental health and cognitive development, including the effectiveness and ethical considerations of cybertheory, the role of AI chatbots and virtual therapists, and the psychological aspects of online learning, critical thinking, memory, and digital amnesia.

Course Outcomes (COs):

- Students will learn key principles of cyber-psychology, such as online behavior, digital identity, and the psychological effects of internet use.
- They will explore case studies of AI applications in mental health, user experience, and online behavior monitoring.
- Students will understand the ethical considerations in AI development and deployment, including issues related to privacy, bias, and transparency.
- Students will learn how to use AI for behavioral analytics, understanding how to interpret data from digital footprints to make predictions about human behavior.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Introduction to Cyberpsychology • Definition and scope of cyberpsychology • Historical context and development of the field • Ethical considerations in cyberpsychology research • Examination of communication patterns in online environments	**L1, L2, L3**	18
Module II: Online Self, Social Media and Relationships • Online self-disclosure, Impression management and privacy concerns • Identity theft and digital footprints, Effects of social media on interpersonal relationships • Social Capital, social comparison and self-esteem in the digital age • Online dating, Virtual Dating and Chatbots and its psychological implications	**L1, L2, L3**	18
Module III: Gaming Addiction and Online Behavioural Misconduct • Understanding Internet and gaming addiction, symptoms, treatment approaches • Anonymity and online disinhibition effect • Types and forms of cyberbullying: Psychological impact on victims and perpetrators • Strategies for prevention and legal interventions	**L3, L4, L5**	18
Module IV: Digital Mental Health and Cognitive Development • Cybertherapy and Digital Mental Health (teletherapy, Efficacy and ethical considerations) • AI Chatbots and Virtual Therapists, other Techniques and strategies • Online Learning and Cognition (online learning and critical thinking, cognitive overload, memory and digital amnesia)	**L3, L4, L5**	18
Module V: Cybersecurity and Virtual Reality • Virtual Reality and Immersive Technologies: Psychological implications of virtual reality experiences, Uses of VR in therapy, education, and entertainment • Cybersecurity and Online Safety: Psychological factors, Cybersecurity threats and their impact on mental well-being • Promoting digital citizenship and responsible online behaviour	**L3, L4, L5, L6**	18

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

DPSY2605	MEDIA AND CONSUMER PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides a comprehensive examination of the relationship between media and consumer behavior. Students will explore key concepts, historical perspectives, and theories of consumer behavior, examining how media influences consumer choices and purchasing decisions. Topics include the role of advertising in shaping consumer behavior, branding strategies, the impact of different media channels on consumer behavior, digital media and online shopping, consumer decision-making processes, and emerging trends in media and consumer behavior. Ethical considerations, cultural influences, and future trends in media consumption will also be discussed.

Course Objectives

Media and Consumer Behaviour is a field of study that examines how various forms of media, such as advertising, television, social media, and digital platforms, influence and shape the choices, perceptions, and decision-making processes of consumers. This discipline explores the interplay between media messages and consumer behaviour, delving into the psychological, cultural, and ethical factors that impact how individuals respond to marketing campaigns, make purchasing decisions, and form brand loyalties.

This course has the following objectives.

1. To understand key concepts, theories, and the historical context.
2. To analyse advertising's role, branding, and ethical considerations.
3. To explore the impact of different media channels.
4. To investigate digital media's influence on consumer choices.
5. To understand the consumer decision-making process.
6. To examine cultural and ethical influences on consumer behaviour.
7. To enhance media literacy and ethical awareness.
8. To analyse public policy and emerging media trends.

Course Outcomes (COs):

On completion of this course, the students will be able to

- Demonstrate a comprehensive understanding of key theories and principles in media and consumer psychology.
- Analyze how different types of media (e.g., television, social media, print) impact consumer attitudes, perceptions, and behaviors.
- Apply theories of persuasion and attitude change to develop effective marketing and advertising campaigns.
- Design and conduct research studies to investigate consumer attitudes, preferences, and behaviors.

DPSY2606	SPORTS PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Sports Psychology is a comprehensive examination of the psychological factors that influence participation and performance in sports and exercise. This course covers a range of topics including motivation, anxiety, concentration, self-confidence, and the psychological benefits of physical activity. Through a combination of theoretical frameworks and practical applications, students will gain insights into the mental processes and behaviors of athletes and teams.

Course Objectives

Sports psychology is a subfield of psychology that focuses on understanding and enhancing the psychological factors that influence sports performance, exercise, and physical activity. It involves the application of psychological principles and techniques to help athletes, coaches, and sports teams improve their mental and emotional well-being, develop effective strategies for performance, and achieve their athletic goals.

This course has the following objectives.

- Develop an understanding of the psychological principles that underlie sports performance, including stress, motivation, and attention.
- Explore the historical and contemporary perspectives of sports psychology to appreciate its evolution and significance in the field of sports and athletics.
- Examine the role of personality, motivation, and skill development in enhancing athletic performance.
- Investigate the cognitive and social aspects of sports, focusing on areas like information processing, group dynamics, and leadership.
- Acquire practical knowledge and ethical considerations for applying sports psychology in training, coaching, and the overall well-being of athletes.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Explain major psychological theories and concepts related to sports performance and exercise behavior.
2. Assess different types of motivation and their effects on athletic performance, distinguishing between intrinsic and extrinsic motivators.
3. Identify sources of stress and anxiety in sports contexts and implement effective strategies to manage these psychological factors.
4. Utilize techniques to improve concentration and mental focus, applying these strategies in practical sports settings.
5. Demonstrate methods to build and sustain self-confidence in athletes, recognizing its importance for performance.
6. Analyze and improve team dynamics by applying psychological principles to enhance communication, cohesion, and leadership within sports teams.
7. Implement psychological skills training techniques, including visualization, relaxation, and mental rehearsal, to enhance athletic performance.
8. Understand the psychological impact of sports injuries and apply strategies to support athletes through recovery and rehabilitation.

SEMESTER-VII

DPSY2701	ADVANCED STATISTICS (PARAMETRIC & NON-PARAMETRIC)	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides an in-depth exploration of advanced statistical methods and their applications in psychological research. Students will learn about various statistical techniques, including ANOVA, correlation, chi-square tests, regression analysis, and factor analysis. The course also introduces students to the use of SPSS and online platforms for statistical analysis. Emphasis is placed on understanding the concepts, assumptions, and applications of these methods, as well as interpreting and reporting results accurately.

Course Objectives

- Provide a comprehensive understanding of advanced statistical concepts and their applications in Psychology.
- Develop proficiency in identifying and applying different scales of measurement.
- Equip students with the skills to conduct and interpret hypothesis testing.
- Emphasize the importance of reliability and understanding the standard error of the mean.
- Teach the computation, interpretation, and application of ANOVA, correlation, chi-square tests, and regression analysis.
- Introduce factor analysis and its application in psychological research.
- Familiarize students with SPSS and online platforms for statistical analysis.

Course Outcomes (COs)

Upon successful completion of this course, students will be able to:

1. Define key statistical concepts and apply them in psychological research.
2. Accurately use and differentiate between nominal, ordinal, interval, and ratio scales of measurement.
3. Perform and interpret one-tailed and two-tailed hypothesis tests, understanding Type I and Type II errors.
4. Determine and evaluate the reliability of statistics in data analysis.
5. Understand and calculate the standard error of the mean.
6. Conduct and interpret two-way ANOVA, Friedman's two-way analysis, Wilcoxon Rank Sum Test, and Kolmogorov-Smirnov test.
7. Perform and interpret various types of correlation analyses, including Phi-Coefficient, Contingency Coefficient, and Tetrachoric.
8. Conduct and interpret Chi-Square Goodness of Fit and Chi-Square Test of Independence.
9. Conduct and interpret simple and multiple linear regression analyses.
10. Understand and apply factor analysis techniques.
11. Use SPSS and online platforms for conducting and interpreting statistical analyses.

DPSY2702	PSYCHOLOGICAL ASSESSMENT AND DIAGNOSIS	L	T	P	FW/ Proj	C
Version	**2023**	1	1	0	0	2
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description: This course provides an in-depth exploration of various psychological assessment tools and techniques used in clinical and educational settings. It covers the theoretical foundations, administration procedures, interpretation, and ethical considerations associated with a wide range of psychological tests, including intelligence tests, achievement tests, personality assessments, projective tests, and developmental scales. Special emphasis is placed on understanding the principles of test construction, bias, fairness, and emerging trends in online testing.

Course Objectives:

1. To familiarize students with the purpose, types, and ethical issues related to psychological testing.
2. To provide an understanding of the theoretical frameworks underlying cognitive, achievement, and personality assessments.
3. To introduce students to a variety of psychological assessment tools, including intelligence tests, achievement tests, personality inventories, and projective techniques.
4. To equip students with the necessary skills to administer, score, and interpret psychological tests accurately and ethically.
5. To enhance students' critical thinking skills regarding the selection and application of appropriate assessment measures based on client characteristics and assessment goals.
6. To explore emerging trends in online testing and their implications for psychological assessment practices.

Course Outcomes: By the end of the course, students should be able to:

1. Demonstrate a comprehensive understanding of the purpose, principles, and types of psychological tests.
2. Evaluate the validity, reliability, and fairness of psychological assessment instruments.
3. Administer, score, and interpret a variety of psychological tests, including intelligence tests, achievement tests, and personality inventories.
4. Identify and address ethical issues and considerations in psychological testing, including cultural and contextual factors.
5. Apply psychological assessment techniques effectively in diverse clinical and educational settings.
6. Critically analyze and synthesize assessment data to generate comprehensive psychological evaluation reports.
7. Adapt assessment strategies to meet the needs of individuals across the lifespan, including children, adolescents, and adults.
8. Stay informed about emerging trends and advancements in psychological assessment, particularly in the context of online testing platforms

DPSY2709	PRACTICALS-VII	L	T	P	FW/ Proj	C
Version	**2023**	0	0	4	0	2
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

The "Psychological Practical" course immerses students in the application of key psychological assessment tools used in clinical and research settings. Students will gain firsthand experience in administering and interpreting assessments such as the Mobile Phone Addiction Scale, Clinical Analysis Questionnaire (CAQ), PGI Health Questionnaire, Career Decision Scale (CDS), NEO Five-Factor Inventory (NEO-FFI), and Raven's Standard Progressive Matrices (SPM). Each of these instruments is pivotal in understanding different aspects of human behavior and mental processes. The course emphasizes the practical application of these assessments, including scoring, interpretation, and reporting results. Through this course, students will build competencies that are crucial for professional practice in psychology.

Course Objectives

1. To demonstrate practical experience to the students in administering and scoring psychological tests andinterpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology tests.
3. To familiarize the students with the use of appropriate statistical techniques
4. To encourage and guide the students to undertake a small-scale research project.

Course Outcomes (COs):

The primary goal of this course is to develop students' practical skills in psychological assessment through direct experience with a variety of testing instruments. By the end of this course, students will be able to:

1. Learn to accurately administer a range of psychological tests and assessments.
2. Develop skills to score assessments correctly and interpret the results in a meaningful way.
3. Gain insights into the specific applications and relevance of each test in different psychological contexts.
4. Understand and evaluate the reliability, validity, and normative data of the assessments.
5. Learn to synthesize assessment results into comprehensive reports.
6. Address ethical considerations and cultural factors in the administration and interpretation of assessments.
7. Build proficiency in the use of technology and tools required for administering assessments.

Note: Total 5 practicals will be conducted in the Fifth semester among the list of following practicals out of which first three practicals are compulsory.

Course Content:

1	Mobile Phone Addiction	Digital Addiction
2	Clinical Analysis Questionnaire (CAQ)	Personality & Psychopathology
3	PGI Health Questionnaire	Health
4	Career Decision Scale	Career
5	NEO-FFI	Personality

DPSY2707	SCHOOL COUNSELLING	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides an overview of the theory and practice of school counselling. It covers essential counselling techniques, developmental theories, and strategies for supporting students' academic, social, and emotional growth. Students will learn how to design and implement comprehensive school counselling programs, address diverse student needs, and collaborate with educators, parents, and community resources. The course emphasizes ethical and cultural considerations in school counselling practice.

Course Objectives

1. To provide students with an understanding of the importance and need for guidance and counseling in school settings.
2. To familiarize students with the role of a counselor in various educational settings.
3. To explore the role of personal guidance in school counseling, emphasizing coordination, collaboration, referral processes, and team-building efforts with teachers, parents, support personnel, and community resources, and recognizing the importance of a holistic approach in counseling.
4. To examine the mental health needs of students, as well as the role of faith and spirituality in students' mental health.
5. To understand the experience of transition for students and to develop knowledge of prevention and crisis intervention strategies to support students.
6. To equip students with practical skills in counseling techniques, communication strategies, and ethical guidelines for working with students in educational settings, fostering empathy, understanding, and support for students' emotional and psychological well-being.
7. To encourage critical thinking and reflection on the role of counselors in promoting students' academic success, personal development, and mental health.

Course Outcomes (COs):

On completion of this course, the students will be able to

- Describe key theories and models in school counselling.
- Apply developmental theories to support student growth and learning.
- Demonstrate effective counselling techniques for individual and group settings.
- Utilize active listening, empathy, and problem-solving strategies in sessions.
- Implement culturally responsive counselling practices
- Adhere to ethical guidelines in school counselling.

DPSY2708	EMERGING FIELDS OF PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course explores the cutting-edge developments and innovative fields within psychology. Students will examine new and interdisciplinary areas such as neuropsychology, positive psychology, health psychology, forensic psychology, and cyberpsychology. The course focuses on contemporary research, applications, and the impact of these emerging fields on society. Students will gain insights into the future directions of psychological science and practice.

Course Objective:

- To make student to become aware of the major psychological approaches to the study of behaviour and mental process,
- To become familiar with major fields of study within psychology, key research findings and theories of these fields.
- To recognize and apply psychological concepts and research findings to everyday situations.

Course Outcome:

By the end of this course, students will be able to:

1. Discuss potential future developments and innovations in psychology
2. Evaluate recent research findings and methodologies in these emerging areas.
3. Identify real-world applications and career opportunities within emerging fields of psychology.
4. Assess the societal impact and ethical considerations of advancements in these areas.
5. This course is ideal for students interested in exploring the latest trends and future directions in psychology, equipping them with knowledge of cutting-edge developments and interdisciplinary approaches

Course Content:

Modules	Blooms level*	Number of hours
Module I: Aviation Psychology Meaning and scope of aviation psychology; Role of an aviation psychologist; Models: Human performance, Human information processing, accident causation, Aeronautical decision-making (ADM). Research Methods use in Aviation Psychology, Abilities and Personality traits.	**L1, L2, L3**	18
Module II: Community Psychology Concept, definition of community psychology, Role of community psychologists, Values in Community Psychology, Research Methods use in community psychology, Social Change, Community Psychology Applied to Various Settings, Case study: Clean India Campaign	**L1, L2, L3**	18

DPSY2739	BASICS OF RESEARCH METHODOLOGY, ETHICS, AND RESEARCH COMMUNICATIONS	L	T	P	C
Version 1	Date of Approval:	4	0	0	4
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

This course aims to provide students with a comprehensive understanding of conducting ethical research, utilizing proper research methodologies, and effectively communicating research findings. The course includes a final project where students will write a Literature Review on a topic chosen in consultation with the teacher(s).

This course is designed to equip students with essential skills and knowledge to conduct ethical research, employ proper research methodologies, and effectively communicate scientific information (with focus on writing a literature review). The course will cover topics such as research design, data collection and analysis, research ethics, and science communication strategies. Through a combination of lectures, discussions, case studies, and practical exercises, students will develop a deeper understanding of the research process and its ethical implications.

Course Objectives

The objective of this course is to impart knowledge about various stages of research process, research ethics and different ways of research communication.

The aim of this course is to impart research skills to the beginners and help to improve the quality of research by the existing researchers. It also encompasses the understanding and application of appropriate research design, statistics, and the use of the computer for reference management, report writing, research paper writing and presentation. The course also introduces the key conceptual issues of each research method, as well as giving practical guidance. It covers the series of research methodology contents: from problem formulation, to design, to data collection, analysis, reporting and dissemination. The course has the dual aims of equipping students with conceptual understandings of current academic debates regarding different methods, and the practical skills to put those methods into practice.

Course Outcomes

On completion of this course, the students will be able to

CO1. Define criteria of good research, steps in research process, and data collection.

CO2. Identify different types of sampling and its purpose.

CO3. Conduct hypothesis testing for different types of samples and interpret the results.

CO4: Learn the importance of literature review, write research paper/thesis, use reference management software.

SEMESTER-VIII

DPSY2807	ADVANCED AND APPLIED COUNSELLING SKILLS	L	T	P	FW/ Proj	C
Version	**2023**	1	1	0	0	2
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Advanced & Applied Counselling Skills is an in-depth exploration of sophisticated counselling techniques and their practical application in diverse settings. This course aims to build upon foundational counselling skills, introducing students to advanced methods and strategies to effectively address complex client issues. Through theoretical study and hands-on practice, students will refine their skills in various counselling modalities, ethical decision-making, and culturally responsive practices.

Course Objectives

This course enables students to gather knowledge about theories of Advanced Counselling Skills. It is further designed to equip students with skills to practice as a Counselling Psychologist.

Course Outcomes (COs):

On completion of this course, the students will be able to

1.Demonstrate Proficiency in Advanced Counselling Theories: Exhibit a deep understanding of advanced counselling theories and their practical applications.

2.Utilize sophisticated counselling techniques effectively to address complex client issues.

3. Confidently handle complex ethical dilemmas and understand the legal responsibilities in counselling practice.

4. Implement culturally responsive strategies in counselling, effectively addressing the needs of diverse clients.

5. Apply crisis intervention techniques and trauma-informed counselling practices in appropriate situations.

6. Combine various counselling theories and techniques to create personalized interventions for clients.

7. Perform thorough client assessments and develop effective, comprehensive treatment plans.

8. Successfully lead group counselling sessions, managing group dynamics and processes.

9. Utilize feedback from professional supervision to enhance counselling skills and professional growth.

DPSY2810	PRACTICALS-VIII	L	T	P	FW/ Proj	C
Version	**2023**	0	0	4	0	2
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

The course immerses students in the hands-on application of advanced psychological assessment tools and experimental techniques. This course covers a range of instruments, including the Culture-Free Self-Esteem Inventories, NEO-4, Wide Range Intelligence Test (WRIT), Detroit Tests of Learning Aptitude (DTLA), Verbal Learning Experiments, and Sociometry Experiment. Students will learn to administer these tools, interpret their results, and understand their applications in various psychological contexts. The course emphasizes practical skill development, ethical considerations, and the integration of cultural factors in psychological assessment.

Course Objectives

1. To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology experiments.
3. To encourage and guide the students to undertake a small-scale research project.
4. To apply the general concepts of psychology through experimentation and testing

Course Outcomes (COs):

On completion of this course, the students will be able to

1. **Administer and Interpret Self-Esteem Inventories**
2. Gain proficiency in using the NEO-4 to assess the four major dimensions of personality.
3. Develop skills in administering and interpreting the Wide Range Intelligence Test to measure cognitive abilities.
4. Use the Detroit Tests of Learning Aptitude to assess various learning aptitudes and educational capabilities.
5. Perform and analyze verbal learning experiments to understand memory processes.
6. Implement and interpret Sociometry Experiments to evaluate social relationships and group dynamics.
7. Apply cultural and contextual considerations to ensure fair and accurate assessment outcomes.
8. Develop comprehensive reports that integrate findings from multiple assessment tools and experiments.

note: Out of the 6 practicals mentioned below, 5 practicals will be conducted in the eighth semester.

Course Content:

1	Culture Free Self-Esteem Inventories, 3rd Edition	Self-Esteem
2	NEO-4™ - Comprehensive Kit	Personality
3	Wide Range Intelligence Test (WRIT)	Intelligence
4	Detroit Tests of Learning Aptitude - Fourth Edition (DTLA-4)	Learning

DPSY2803	REHABILITATION PSYCHOLOGY	L	T	P	FW/ Proj	C
Version	**2024**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

Rehabilitation Psychology offers an in-depth exploration of the psychological principles, theories, and practices involved in assisting individuals with disabilities or chronic health conditions to achieve optimal functioning and well-being. This course examines the biopsychosocial aspects of disability, including the impact of physical, cognitive, emotional, and environmental factors on individuals' functioning and quality of life. Topics may include adjustment to disability, coping strategies, resilience, self-management skills, psychosocial interventions, and advocacy for disability rights. Through case studies, experiential learning activities, and discussions, students gain insight into the challenges faced by individuals with disabilities and develop the knowledge and skills necessary to support their rehabilitation and integration into society.

Course Objectives:

- To provide an in-depth understanding of the profession of Rehabilitation Psychology and its practices.
- To familiarize students with the history, growth, and scope of rehabilitation psychology, as well as various areas of specialization within the field. Additionally, the course seeks to equip students with the necessary knowledge and skills to assess impairments, disabilities, and handicaps, along with conducting evaluations of cognition, aptitudes, psychopathology, work/vocational abilities, and daily functioning.
- To introduce students to theoretical frameworks in health behavior and rehabilitation, including theories of health behavior change and intervention strategies for individuals and families affected by disabilities.
- To explore the dynamics of family reactions to disabilities, coping styles, and the role of family counseling, as well as coordination within multidisciplinary teams. It delves into the principles and practices of Community-Based Rehabilitation (CBR).
- To address ethical and policy issues pertinent to rehabilitation psychology, including rehabilitation ethics, relevant policies and acts.

Course Outcome:

By the end of this course, students should be able to:

1. Demonstrate a comprehensive understanding of the profession of Rehabilitation Psychology, including its history, growth, and scope.
2. Apply knowledge of assessment techniques to evaluate impairments, disabilities, and handicaps, as well as cognitive, vocational, and daily functioning abilities.
3. Analyze and apply theoretical frameworks in health behavior and rehabilitation to develop effective intervention strategies for individuals and families affected by disabilities.
4. Utilize behavior modification and cognitive therapies in rehabilitation contexts to facilitate positive outcomes for clients.
5. Understand and address the dynamics of family reactions to disabilities, employing appropriate coping strategies and family counseling techniques.
6. Collaborate effectively within multidisciplinary teams to provide holistic rehabilitation services.
7. Implement principles of Community-Based Rehabilitation (CBR) to promote inclusion and empowerment within communities.
8. Demonstrate awareness of ethical considerations and policies relevant to

DPSY2806	ACADEMIC-WRITINGS AND RESEARCH SKILLS	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course provides a comprehensive guide to academic writing and research skills specifically tailored for students in psychological assessment. It covers the fundamentals of scholarly writing, including the development of clear and concise arguments, proper citation practices, and the structure of research papers. Additionally, the course delves into research methodologies, from designing and conducting studies to analyzing and interpreting data. Emphasis is placed on fostering critical thinking, enhancing information literacy, and adhering to ethical standards in both writing and research. Students will learn to synthesize research findings, present their ideas effectively, and contribute to the field of psychology through well-crafted academic work.

Course Objectives

This course will introduce students to the domain of academic writing andits intricacies. The course seeks to impart knowledge about the styles of writing used in the current academic scenario. The course also familiarizes students with different types of academic writing and the latest APA manual.

The following are specific course objectives:

1.To identify different types of scientific articles from journal.

2.To know the appropriate style of scientific writing tocommunicate a topic or a finding effectively.

3.To present scientific findings in APA format and to follow APAguidelines in academic writing.

4.To understand the need to follow ethical standards in academic writing and to avoid practices such as plagiarism.

5. To learn ethical issues in using AI for research

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Gain a solid understanding of the conventions and styles of academic writing in psychology.
2. Learn to construct clear, coherent, and well-organized academic papers and reports.
3. Become proficient in using various citation styles (e.g., APA, MLA) and managing references effectively.
4. Develop skills to search for, evaluate, and synthesize scholarly literature in psychology.
5. Learn to design methodologically sound research studies, including formulating research questions, hypotheses, and selecting appropriate methodologies.
6. Gain competence in statistical analysis and interpretation of research data.
7. Understand and adhere to ethical guidelines in conducting and reporting research.
8. Cultivate the ability to critically evaluate research findings and theoretical perspectives.
9. Learn to effectively present research findings through written reports, presentations, and publications.

Course Content:

Modules	Blooms level*	Number of hours
Module – I: Introduction to Academic Writing A framework of the state of academic writing today and its significance; Distinct methods and procedures of academic writing for research synopsis and research publication	**L1, L2, L3**	18
Module- II: Rules and Guidelines in Academic Writing An overview of style and formatting using the American Psychological Association's (7th) criteria particular rules for references, index citations, and academic paper structure.	**L1, L2, L3**	18
Module- III: Forms of Academic Writing Abstract writing; Review of literature; Scientific poster/paper presentations; Book review; Tables and graphs in academic papers.	**L3, L4, L5**	18
Module- IV: Plagiarism and Its Types Plagiarism: Introduction of plagiarism, Types of plagiarism, Tools to check plagiarism, Ethics in research regarding plagiarism	**L3, L4, L5**	18
Module- V: Experiential Learning and Assessment Strategies- Understanding of Online search engines and generating self profiles in search engines; Assignment on review of literature on styles and formats.	**L3, L4, L5, L6**	18
Module- VI: Classroom Assignment and Assessment Classroom writing assignments on Review of Literature and paper /poster presentation and research paper writing, Using Chat GPT and generating the AI ethically. Individual/Group presentations on forms and issues in academic writing.		

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE

DPSY2808	APPLIED PSYCHOTHERAPY	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course, Applied Psychotherapy, helps students learn how to counsel and provide therapy to people facing emotional challenges. It covers different skills and techniques used in counselling and therapy sessions.

Course Objectives

To provide knowledge and skills to students about counseling and psychotherapy and also to trainthem in using therapeutic and counseling techniques for effectively practicing

.

Course Outcomes (COs):

On completion of this course, the students will be able to

1. Understand the basics of counselling and psychotherapy, like listening and showing empathy.
2. Learn advanced skills such as interpreting people's behaviour and managing difficult situations.
3. Know how to start and end counselling sessions and deal with crises effectively.
4. Gain insights into the counselling process, including setting goals and assessing progress.
5. Develop skills to handle resistance from clients and understand their feelings.
6. Learn about legal and ethical aspects of counselling and how to document therapy sessions properly.
7. Practice case formulation through role-playing exercises to apply learned skills in real-life scenarios.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Basic Counseling and Psychotherapeutic Skills What is psychotherapy discuss the basic Skills of a psychotherapist and a counsellor: Empathy, Genuineness, unconditional positive regard, congruence, Listening, Para-phrasing, reflecting, summarizing Advanced Skills of a psychotherapist: interpretation, insight, transference interpretation, exploring projections, identifying failure of therapy, identifying working with burnout, self-supervision, confrontation Characteristics of effective counselor/ therapists	**L1, L2, L3**	18

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

DPSY2809	PSYCHOLOGY OF CRIMINAL BEHAVIOR AND PROFILING	L	T	P	FW/ Proj	C
Version	**2023**	3	1	0	0	4
Pre-requisites/Exposure	Nil					
Co-requisites	Nil					

Catalog Description

This course of Psychology of Criminal Behaviour and Profiling is a field that examines the psychological factors influencing criminal actions and utilizes this understanding to develop profiles of offenders. It involves studying the mental, emotional, and social processes that contribute to criminal behaviour, including personality traits, developmental experiences, and environmental influences. By analysing crime scenes, victimology, and patterns of behaviour, forensic psychologists and criminal profilers aim to identify characteristics and predict the future actions of offenders. This field combines elements of psychology, criminology, and law enforcement to understand the motivations behind crimes, aid in criminal investigations, and contribute to the apprehension and prosecution of criminals. It also involves assessing the risk of reoffending and providing insights into preventive measures and rehabilitation programs. Through a combination of theoretical knowledge and practical application, professionals in this area help to ensure justice and enhance public safety.

Course Objectives

- Demonstrate an understanding of the psychological theories and factors influencing criminal behaviour.
- Apply knowledge of criminal profiling methodologies and techniques.
- Critically evaluate and analyse real-life criminal cases using psychological principles.
- Discuss the ethical considerations and challenges in criminal psychology and profiling.
- Identify emerging trends and contemporary issues in the field of criminal psychology.

Course Outcomes (COs):

- Explain the various factors, including biological, psychological, and social influences, that contribute to criminal behaviour.
- Analyse different types of criminal behaviour and the psychological motivations behind them.
- Conduct and interpret psychological assessments of offenders to determine risk factors, mental state, and likelihood of reoffending.

Course Content:

Modules	Blooms level*	Number of hours
Module 1: Introduction to Criminal Psychology • Meaning and Historical perspective of criminal psychology • Biological, psychological, and social factors in criminal behaviour • Ethics and controversies in criminal psychology research • Rehabilitation Of Offenders and Victims	**L1, L2, L3**	18

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module 2: Theories of Criminal Behavior • Theories of Crime Causation • Psychodynamic theories (e.g., Freud, Bowlby), Behaviourism, Morality theories , Developmental, and Social learning theories • Neurological, Biological and genetic influences on criminal behavior	**L1, L2, L3**	18
Module 3: The Criminal Mind • Typology of offence: (Assault: Homicide, serial murders, sexual offence; petty theft, burglary and ransom; Violence & Terrorism; Abuse and Addiction, White Collar, Cybercrimes) • Criminal Psychopathy and behaviour • Juvenile Delinquency and Childhood Crimes • Criminal behaviour and personality assessment	**L3, L4, L5**	18
Module 4: Criminal Profiling and Correctional Methods • Psychological assessment in Corrections (Interviewing, Interrogation, Tests, Detection of Deception and Eyewitness Evidence) • The system and process of criminal profiling: geographic profiling, psychological profiling • Case studies and real-world applications of profiling • Institutional corrections- Correctional facilities, Legal rights of inmates, Roles of correctional psychologists- - treatment and rehabilitation	**L3, L4, L5**	18
Module 5: Investigative Psychology • Crime scene analysis and behaviour analysis • Forensic psychology and the legal system: Process, risk assessment- Trial and Litigation consultation, Expert Testimony, survival of witness stand. Criminal Courts: Pleading Insanity and other defences; Family Law and Child custody evaluations) • Profiling and law enforcement collaboration • Ethics in criminal profiling and the role of the profiler in court	**L3, L4, L5, L6**	18
Module 6: Emerging Trends and Contemporary Issues • Multiculturism and Victimization: Gender Equality, Racism • Cybercrime and the psychology of online offenders • Use of AI and Technology for Crime Detection and profiling • Current research and Global perspectives on criminal behaviour and profiling		

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

DPSY2839	DATA ANALYSIS & VISUALISATION USING SOFTWARE	L	T	P	C
Version 1	Date of Approval:	4	0	0	4
Pre-requisites/Exposure	Class X Mathematics				
Co-requisites					

Catalog Description

The implosion of available data has made visualization more critical but also more challenging. Data analysis and Data Visualization are essential tools for business analysis, engineers, policymakers, and decision-makers. Developed originally for "small data", visualization techniques have been met with varied success in the past centuries and decades. There are a few well-known visualizations that are very effective in capturing the essence of the data, and of course, there are many infamous negative examples of poor visuals. An effective visual is critical for decision making it, but it also requires a lot of work, customization, attention to detail, and refinements.

Course Objectives

The course is designed to help students develop skills and knowledge in the following area(s):

- Develop an understanding of what is a good visualization for a given purpose
- Learn visualization theory & techniques
- Build a substantial data analytic project
- Apply data analysis and visualization with Excel, SPSS, R, Python, NVivo and MATLAB

Course Outcomes

On completion of this course, the students will be able to

CO1. Students will be able to articulate meaningful lines of inquiry that might be explored through the collection, organization, visualization, and analysis of data in a context associated with their primary field of study using (as appropriate) numerical, textual, spatial, and/ or visual data.

CO2. Student will understand what data are, how they are collected, and how to assess the quality/ reliability of data.

CO3. Students will demonstrate intermediate proficiency in the visualization of data to communicate information and patterns that exist in the data.

CO4: Students will be able to use at beginning level of proficiency the tools of statistics and machine learning to ask questions of and explore patterns in data.

COGNITIVE PSYCHOLOGY

Course Code: PSY4102 **Credit Units: 02**

Course Objective:
The course deals with the understanding of higher mental processes and its relevance in daily living. The study of normal processes is essential to enable the understanding of neurological or abnormal dysfunctions. The objective of this course is (a) to provide an understanding of normal metal processes and their relationship to brain, mind and behavior, and (b) to study the concept of cognition and its application in cognitive psychology. This will facilitate the students develop the cognitive skills in themselves and others.

Course Contents:
Module I: Historical Background
Psychophysical approach
Information processing approach
Ecological Approach
Contemporary Cognitive Psychology

Module II: Attention and Perception
Theories of Attention and current developments: Broadbent's filter theory, Triesman's attenuation theory, automatic and controlled processing, switching attention.
Perceptual learning and development
Perception of shape, space and movement
Implicit perception and sensory integration theory
Cognitive – Attentional Theory: Information Processor, Cognitive Timer

Module III: Learning
General Phenomenon of Learning: Learning vs Maturation, Native Response Tendencies Theoretical issues of learning: Classical conditioning, Instrumental conditioning Verbal learning: Stimulus material, Trigram Methods-Serial Learning, Paired Associate Learning Discrimination Learning: Nature, Theories-Algebraic Summation Theory, Relational Theory, Transposition Effect

Module IV: Memory & Forgetting
Sensory memory, STM, LTM, Working memory
Metamemory: Semantic & Episodic Memory
Models of Semantic knowledge
Theories of forgetting
Mnemonics

Module V: Thinking and Language Formation
Concept formation and categorization
Judgment and Decision-making
Reasoning & Problem solving: Stages – Preparation, Production, Judgment and Incubation
Structure of language, its acquisition and Formation
Language and Thinking: Linguistic Determinism, language and Cognition

PARAMETRIC STATISTICAL METHOD

Course Code: PSY4105 **Credit Units: 03**

Course Objective:
The Present paper focuses on providing knowledge about the basics of statistics. It will give clear understanding to the students about application of parametric statistical methods. Parametric tests are generally more powerful in that the likelihood (probability) of a test reaching the correct conclusion is greater. Besides this, a module is added in last so to make students aware of parametric statistics in SPSS. Thereby they can understand the procedures and applications of parametric statistics using SPSS.

Course Contents:
Module I: Basics
Nature, Meaning and importance of statistics Concept of Reasoning, population, sample and probability theory in statistical inferences Categories of statistics: Descriptive and Inferential Variables and their types Scales of Measurement: Nominal, Ordinal, Interval, Ratio.

Module II: Statistical conjecture
Sampling and its kinds: Probability sampling method and Non-Probability sampling method.
Difference between Objectives and Hypothesis
Hypothesis testing: One-tailed and Two-tailed tests, Type I and Type II errors

Module III: Statistics and Test of Significance
Meaning, concept and importance of determining reliability of statistics in data analysis Standard error of mean, standard deviations, percentages and correlation coefficients Significance of difference between means-critical ratio and t-test calculation (large and small sample) assumption & uses One-Way and Two Way ANOVA.

Module IV: Correlation and Regression
Correlation: concept, types, assumption and Utility of Cor-relational Analysis in Psychological Research Bi-serial Correlation, Point Bi-serial Correlation, Partial Correlation, Tetra-choric Correlation Simple and Multiple linear regression, its uses, concepts and assumptions Difference between Simple linear and multiple regressions

Module V: Introduction to SPSS and parametric statistics in SPSS
Introduction to SPSS, its usage and functioning
Understanding the concepts of Parametric tests in SPSS
Learning data entry

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE

PRACTICUM- I

Course Code: PSY4106 **Credit Units: 03**

Course Objective:

1. To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology experiments.
3. To encourage and guide the students to undertake a small-scale research project.
4. To apply the general concepts of psychology through experimentation and testing

Note: Total 5 practicals will be conducted in the first semester among the list of following practicals

Course Content:

1	Continuous Visual Memory Test (CVMT)	Memory
2	Illinois Test of Psycholinguistic Abilities – Third Edition (ITPA-3)	Language
3	16 PF Questionnaire - Fifth Edition with Hand scoring	Personality
4	Tennessee Self-Concept Scale - Second Edition (TSCS:2)	Self-Concept
5	Developmental Test of Visual Perception – Adolescence and Adult	Perception
6	Test of Memory and Learning – Second Ed. (TOMAL-2)	Memory and Learning

Examination Scheme:

Components	A	File Demonstration	Viva	EE
Weightage (%)	5	35	35	25

FIELD PRACTICE-I

Course Code: PSY4107 **Credit Units: 04**

Course Objective:
To develop, in students the skills of observation, collection and documentation of data for conducting theoretically correct and practically relevant research

Methodology

Each student will engage themselves in interaction and observation of psychological processes in a subject/ field of their choice.
Student will then present their findings in the form of a paper for seminar discussions.
Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme:

Field/Seminar Report	:	40 marks
Viva-Voce	:	30 marks
Internal Faculty and Interaction	:	10 marks
Presentation/Daily Diary Report	:	20 marks

PSYCHOPATHOLOGY

Course Code: PSY4201 **Credit Units: 03**

Course Objective:

- To acquaint students with various manifestations of psychopathology
- To impart knowledge and skills required for diagnosis of psychological conditions.
- To introduce them to different perspectives and models of etiology.
- To develop skills required for psychopathological formulation.

This course enables students to the study and prediction of adaptive and maladaptive behaviours and its processes across lifespan. It also enables students to understand different diagnostic and educational models of psychopathology.

Course Content:

Module I: Classification and Theoretical Models

Systems of Classification, basic features; DSM-IV TR, ICD-10, similarities and differences Major Theoretical Models of Psychopathology: The medical model, Psychoanalytic model, Behaviouristic model, Humanistic-existential models, Interpersonal approach, Systems approach.

Module II: Diagnosis and Prognosis

Problems and methods of diagnosis: physiological examination, observation, case-history, interview method, psycho-diagnostic tests, measures of bodily functions, computer assisted diagnosis.

Module III: Mood and Anxiety Disorder

Bipolar disorders: Manic, Depressive, Mixed Depressive disorder: Major depression and dysthymia, Suicide Anxiety Disorders: Generalized anxiety disorder, phobia, panic disorder, post traumatic stress disorder and obsessive compulsive disorder

Module IV: Major Clinical Disorders

Schizophrenia
Other psychotic disorders: Bipolar, Delusional, psychotic depression

Module V: Somatoform Disorders

Conversion disorder, Somatization disorder, Hypochondriasis, Body dysmorphic disorder, Pain disorder

Module VI: Disorders of Infancy, Childhood and Adolescence

Developmental disorder: PDD, Rett Disorder, Asperger Disorder,
Behavioral Disorder: Conduct Disorder, Hyperactivity Disorder, ADHD,
Genetic Disorders: Down Syndrome

Module VII: Personality Disorder

Personality Disorder: Narcissistic Personality, Histrionic Personality, Antisocial (Psychopathic) Personality, Borderline Personality, Paranoid Personality, and Schizotype Personality

Module VIII: Sexual Dysfunctions and Paraphilias

Dysfunctions of Desire, Arousal, Orgasm and Pain
Paraphilias, Paedophilia and Rape
Gender identity disorders
Impotence and frigidity
Causes, preventing suicide

PSYCHOLOGICAL ASSESSMENT AND DIAGNOSIS

Course Code: PSY4202 **Credit Units: 03**

Course Objective:
The course teaches the students about the characteristics, objectives and wide ranging effects of psychological testing. It further describes the various testing methodologies and outlines capabilities and limitations of these methods.

Course Contents:
Module I: Introduction
Purpose of testing, types of test used, Bias & Fairness
Ethical Issues in Psychological Testing
Overview of Tests
Norms, Scoring Interpretation and Report Writings
Issues in measurement
Emerging trends of online testing

Module II: Cognitive functions and their assessment
Concept of Attention, Gestalt Theory, Memory and Forgetting, PGI Memory Scale
Theories of Intelligence
Intelligence Tests:
Slosson Intelligence Test – Revised For Children and Adults (SIT-3/R)
Bhatia Battery Weschler's Adult Performance Intelligence Scale (WAPIS)
Raven's Progressive Matrices (Colour Progressive Matrices, Standard Progressive Matrices and Advanced Progressive Matrices)
Binet Kamat Test
Weschler's Intelligence Scale for Children – Revised (WISC)
Wide Range Intelligence Test (WRIT)
Alexander Pass-a-long Test of Intelligence
Draw-A-person Intellectual Ability Test for Children, Adolescents and Adults (DAP:IQ)

Module III: Achievement Test
Wechsler Individual Achievement Test (WIAT)
Diagnostic Achievement Test For Adolescents – Second Edition (DATA-2)
Kaufman Test of Educational Achievement (KTEA)
Woodcock-Johnson Tests of Achievement (WJ)

Module IV: Assessment of Personality: Non-Projective Test
Cattell's 16 Personality Factor Inventory (16 PF)
California Q-Sort Tests
Myers Briggs Type Indicator (MBTI)
Minnesota Multiphasic Personality Inventory (MMPI)
Personality Inventory for Children
OMNI Personality Inventory (OMNI)
Bell's Adjustment Inventory
Eysenck's Personality Questionnaire
NEO™ Personality Inventory-3 (NEO™-PI-3) Adult / Adolescent

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module V: Assessment of Personality: Projective Tests
Introduction of Projective Techniques
Difference between Projective & Non-Projective Techniques
Thematic Apperception Test
Rorschach Inkblot Test
House-Tree-Person (H-T-P)
Sentence Completion Test

Module VI: Developmental Scales
Developmental Screening Test
Vineland's Social Maturity Scale
Measures of Psychosocial Development (MPD)
Gesells' Developmental Schedule

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

NON-PARAMETRIC STATISTICAL METHOD

Course Code: PSY4204 **Credit Units: 03**

Course Objective: The Present paper focuses on providing knowledge about the basics of nonparametric statistics. It will give clear understanding about differences between Parametric & Nonparametric Test Procedures. This paper will

1. Explain commonly used Nonparametric Test Procedures.
2. Perform Hypothesis Tests Using Nonparametric Procedures.
3. Going to teach student how to use SPSS with non-parametric statistics.

Course Contents:

Module I: Basics
What is Non-Parametric statistics: Nature, Meaning and Concept strengths and limitations of non-parametric procedures Parametric VS Non- Parametric Statistics
Four Levels of Measurement and Non-parametric statistics

Module 2: Tests of differences between Groups and Variables
The Friedman Two-way analysis of variance by ranks-Basic concepts, uses and computations
Test of differences between groups (Independent samples): Mann-Whitney U test computations, Kolmogorov-Smirnov test, uses Test of differences between variables (Dependent samples): Kruskal-Wallis ANOVA analysis of ranks, K-Sample Median test, uses and concepts

Module 3: Nominal Measures of Correlations
Concept definition assumptions of Nominal Measures of Correlations
The Phi-Coefficient, Contingency coefficient concepts uses and calculations
Tetrachoric**r**: Its uses, computation and comparison

Module 4: Chi-Square
Concept and Definition, its assumptions and use
Chi-Square Goodness of Fit (One-Sample Test)
Chi-Square Test of Independence

Module 5: Introduction to SPSS and Non-parametric statistics in SPSS
Introduction to SPSS, its usage and functioning
Understanding the concepts of Non-Parametric tests in SPSS
Learning data entry

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

POSITIVE PSYCHOLOGY

Course Code: PSY4206 **Credit Units: 02**

Course Objective: To enable students to understand the theories and research related to positive psychology and equip students to develop and apply positive psychology for enhancement of self and others.

- To trace the development of positive psychology as an independent discipline with its multidimensional perspective.
- To study the relationship of personality and situational variables with positive psychology.
- To discuss strategies to enhance positive affect.

Course Contents:

Module I: Introduction to Positive Psychology
Positive Psychology: Concept, History, Nature and Scope
Art of Well Being
Defense Mechanism & Coping Strategies

Module II: Interpersonal Perspectives & Emotional Intelligence
Empathy Compassion, Love, Social relations
Hope & Optimism
Theory of Emotions
Emotional Intelligence & its importance

Module III: Strengths and Virtues
Tyranny of Wisdom
Character Strengths and Virtues
Resiliency in the phase of challenge & Loss

Module IV: Happiness
Theories, measures and Positive correlates of happiness
Traits associated with Subjective Happiness
Cross-cultural differences

Module V: Psychology of Positivisms
Positive Emotional States and Well Being with special emphasis on Forgiveness and Gratitude
Positive Institutions: Families, Religion, Spirituality and Well being.
Specific issues: Aging Well

Module VI: Positive Thinking and Applications of Positive Psychology

Examination Scheme:

SCIENTIFIC RESEARCH PAPER

Course Code: PSY4209 **Credit Units: 01**

Course Objective:
The scientific research papers for Masters Students is to enhance the reading and writing habits of the students and to make them aware about the process of carrying out a research work. This helps them to develop insight into the course they are studying which creates an academic interest among the students. Presentation of the term paper plays an important role as it facilitates knowledge sharing and improvement in presentation skills which will further enhance the confidence of the students. The overall objective of this term paper is to develop research orientations in students and to make them understand and enhance skills in Research Methodology.

Guidelines for Research Article or Scientific Papers:

Topic
Introduction
Review Research
Objective
Methodology
Discussion
Conclusion
References & Bibliography

No. of pages in the compilation of the paper 25-30 (minimum 25 pages)

Examination Scheme:

RESEARCH METHODS: EXPERIMENTAL DESIGN

Course Code: PSY4301 **Credit Unit: 02**

Course Objective:
Research Methodology is a way to find out the result of a given problem on a specific matter or problem that is also referred as research problem. In Methodology, researcher uses different criteria for solving/searching the given research problem. Different sources use different type of methods for solving the problem. So this course will enable the student to understand and apply basic research methods in psychology including research design, data analysis and report findings research conclusion apparently based on the parameters of particular research methods.

Course Contents:

Module I: Introduction to Research
Meaning of Scientific Research
Objectives and Steps in Scientific Research
Defining research problem
Defining variables
Developing hypothesis

Module II: Evaluating Measures and Hypothesis
Need For Evaluating Measures
Reliability and Validity
Hypothesis testing: Type1 and Type 2
Going beyond hypothesis testing: Effect size and Power

Module III: Validity of Experimental Researches and Threats to them
Statistical Conclusion validity
Construct validity and External Validity
Establishing the cause and Effect
Single Group threat, Multiple Group threats, Social threats

Module IV: Experimental Designs-I
Two-Group experimental designs
- Within-subject Design
- Between-subject design
- General Linear Model

Module V: Experimental Designs-II
Factorial designs
Randomized Block designs
Hybrid Experimental Designs: Soloman four group designs
Mixed designs

PSYCHOTHERAPY

Course Code: PSY4302 **Credit Units: 03**

Course Objective:
The course enables students to learn various therapies and their applications in counselling field. The course aims to enable participants to acquire the development and therapies in counselling which can be used in a variety of settings, and also to understand the importance of the development of personal awareness in the effective application of counseling skills.

Course Contents:
Module I: Introduction
Psychotherapy: Meaning, Nature & Scope
Variables affecting Psychotherapy: Specific Variables: Client Variable, Therapist Variable, Process variables, Social & Environmental Variable
Non-Specific Variables: Spontaneous cure, Placebo Effect
Currents and Future Trends of Psychotherapy

Module II: Psychotherapy in India
Psychotherapy in the Indian context
Spirituality and psychotherapy
Yoga and Meditation

Module III: Varieties of Psychotherapy
Supportive therapy
Re-educative Therapy
Re-constructive therapy
Counselling vs. Psychotherapy

Module IV: Psychoanalytic Therapies
Freud's Psycho-analytic Therapy, Adlerian Psychotherapy, Brief Dynamic Therapies

Module V: Humanistic Therapies
Client-Centered Therapy, Existential Therapy and Gestalt Therapy

Module VI: Behavioral and Cognitive Behavior Therapy
Behavioral therapy, Cognitive Behavior therapy, Rational Emotive Behavior Therapy (Ellis)

Module VII: Few more Important Therapies
Family, Marital and Interpersonal Therapy
Therapies with Children and Adolescents
Group Therapy

Module VIII: Therapeutic Guidelines while working with
Women, Older clients, Clients with personality disorder
Grief and loss
Self-harm
Persons from disadvantaged context

COUNSELLING PSYCHOLOGY

Course Code: PSY4304 **Credit Unit: 03**

Course Objective: To produce graduates with a well-developed professional identity as counseling psychologists, including awareness and appreciation of context, development, and strength-based interventions. Thus, we seek to develop the professional skills of our students such that each is able to:

- Demonstrate understanding of the impact of multiple contexts on human behavior
- Demonstrate understanding of theories and techniques of developmentally-based health promotion and intervention for individuals, systems, and communities
- Appreciate the role of individual and cultural differences and diversity in human development and behavior

Course Contents:

Module I: Introduction

Meaning, Definition & Goals
Historical Background: Origin of Counseling within Philosophy and Medicine,
Influence from Psychology, Mental health development, the guidance movement and other influences
Difference between Counseling and other associated helping professions (psychotherapy, psychiatry, social work, guidance etc.)

Module II: Counseling Process

Settings for counseling
Steps in counseling
Therapeutic relationship: The importance of relationship, components of relationship, Facilitative conditions for the counseling relationship

Module III: Counseling Approach: Insight oriented

Psychodynamic Approach: Psychoanalytic, Adlerian
Humanistic Approach: Existential, Client-centered, Gestalt

Module IV: Counselling Approach: Action oriented & other approaches

Behavioural Approach: Operant-Conditioning, Classical-Conditioning.
Cognitive Approach: Cognitive Tharepy, Rational emotive therapy.
Other Approaches: Narrative Therapy, Expressive Therapy, and Biofeedback.

Module V: Current Issues in Counseling:

Ethical Issues: Professional Codes, Our divided loyalties, Areas of ethnical difficulty, recent trends
Legal Issues: Advice for the passionately committed counseling student
Mental Health Counseling
Counseling diverse population: Gender bias, Counseling the aged, the ethnic minorities, and the physically challenged

Examination Scheme:

PRACTICUM- III

Course Code: PSY4308 **Credit Units: 03**

Course Objective:

1. To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology experiments.
3. To encourage and guide the students to undertake a small-scale research project.
4. To apply the general concepts of psychology through experimentation and testing

Note: Total 5 practicals will be conducted in the third semester among the list of following practicals

Course Content:

1	Measures of Psychosocial Development (MPD)	Development
2	Culture Free Self-Esteem Inventories, 3rd Edition	Self-Esteem
3	State-Trait Anger Expression Inventory-2™ (STAXI-2)	Anger
4	Personality Inventory for Youth	Personality
5	Family Relations Test: Children's Version	Interpersonal Relationship
6	Wide Range Intelligence Test (WRIT)	Intelligence

Examination Scheme:

Components	A	File Demonstration	Viva	EE
Weightage (%)	5	35	35	25

FIELD PRACTICE-III

Course Code: PSY4309 **Credit Units: 04**

Course Objective:
To develop, in students the skills of observation, collection and documentation of data for conducting theoretically correct and practically relevant research

Methodology

Each student will engage themselves in interaction and observation of psychological processes in a subject/ field of their choice.
Student will then present their findings in the form of a paper for seminar discussions.
Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme:

Field/Seminar Report	:	40 marks
Viva-Voce	:	30 marks
Internal Faculty and Interaction	:	10 marks
Presentation/Daily Diary Report	:	20 marks

SUMMER INTERNSHIP EVALUATION

Course Code: PSY4335 **Credit Units: 06**

GUIDELINES FOR INTERNSHIP FILE AND INTERNSHIP REPORT

(These guidelines will be useful for undertaking an internship programme during the summer or at any other time wherein the student/ researcher works full time with a company/organisation)

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship programme can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal class room situations. These attributes are intellectual ability, professional judgment and decision making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain and submit a file (**Internship File**) and a report (**Internship Report**).

INTERNSHIP FILE

The Internship File aims to encourage students to keep a personal record of their learning and achievements throughout the Programme. It can be used as the basis for lifelong learning and for job applications. ***Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.***

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and his/her own personal contribution to the organization.

The File is essentially a comprehensive documentation of how one proceeds while working on the assignment and should be regularly checked by the faculty guide/ supervisor, issues discussed with the students, doubts if any clarified and signed as having done so. This will form the basis of **continuous evaluation** of the project.

The File will include ***five sections*** in the order described below.

1. **The Title Page –** An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Table of Content –** An outline of the contents of the file by topics and subtopics with the page number and location of each section.
3. **Introduction** – Short, but should include how and why you obtained the internship experience position and the relationship it has to your academic/professional and career goals.
4. **Main Body** – Should include a brief summary/ executive summary of the **Internship Project Report** that the student has worked on, an **analysis of the company/organization** in which the

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

student is working, a **personal review** of the student's management skills and how they have been developed through the programme, the daily tasks performed, major projects contributed to, dates and hours spent on a task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

5. **Appendices** – Include pamphlets, forms, charts, brochures, technical and descriptive literature, graphs and other information related to your Internship experience.

INTERNSHIP REPORT

The **Internship Report** is the research report that the student has to prepare on the project assigned by the organization. (Incase a student is not assigned a specific research project in the organization, he has to select any one aspect of the organization and prepare a research report on it). The lay out of the report should be as per the standard layout prescribed by the organization wherein the student undertakes the Internship. In case, there is no layout prescribed by the organization the following components should be included in the report:

- **Title or Cover Page**.
  The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

- **Acknowledgements**
  Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

- **Abstract**
  A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

- **Table of Contents**
  Titles and subtitles are to correspond exactly with those in the text.

- **Introduction**
  Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

- **Materials and Methods**
  This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

- **Results and Discussion**
  Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

  Note that in writing the various secions, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporing or contradicting the present case of research.

- **Conclusion(s) & Recommendations**
  A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:
  - Did the research project meet its aims (check back to introduction for stated aims)?
  - What are the main findings of the research?
  - Are there any recommendations?
  - Do you have any conclusion on the research process itself?

- **Implications for Future Research**
  This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

- **Appendices**
  The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.
- **References**
  References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

The Layout Guidelines for the Internship File & Internship Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Assessment Scheme:

Continuous Evaluation: 30%
(based on Internship File and the observations of the faculty guide/ supervisor)

Feedback from Company/ Organization: 10%

Final Evaluation:
(Based on Internship Report, Viva/ Presentation) 60%

CLINICAL PSYCHOLOGY

Course Code: PSY4303 **Credit Units: 03**

Course objective:
Clinical psychology is the branch of psychology concerned with the assessment and treatment of mental illness, abnormal behavior and psychiatric problems. This field integrates the science of psychology with the treatment of complex human problems, making it an exciting career choice for people who are looking for a challenging and rewarding field.

Course Contents:
Module I: Introduction
Meaning and Nature of Clinical Psychology
Background of Clinical Psychology: First Fifty years of Clinical Psychology (Establishment of Psychological Clinics and Influence of World War I)
Clinical Psychology: between World War I and II; From World War II to Present

Module II: **Foundation of Clinical Psychology**
Historical origin, the Psychometric tradition, the influence of health and child guidance movement, the influence of Sigmund Freud & the American Psychologist's in America.
The influence of World War II on development of Clinical Psychology
Roots of Clinical Psychology in India: the pre-independence phase, post independence to the present scenario.

Module III: Development of clinical Psychology as a profession.
Activities of Clinical Psychologist: psychological assessment, Psychotherapy, research, community mental health programme, teaching, consultation, administration.
Differences & similarities with other mental health professions
Subspecialties of clinical Psychology: Clinical health Psychology, Forensic Psychology, Geropsychology, Clinical Neuropsychology, and child clinical psychology.
Professional identity, responsibilities

Module IV: Diagnosis and assessment.
Nature and purpose of Clinical diagnosis & assessment
Stages in the Assessment Process
Clinical Assessment Techniques: observation, interview, case-study, Psychological tests.

Module V:
Employment Setting for Clinical Psychologist
Subspecialties of Clinical Psychology
Organizations in Clinical Psychology
Ethical and Legal Issues in Clinical Psychology
Cultural issues, current scenario & future prospects.

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE

DEVELOPMENTAL PSYCHOLOGY

Course Code: PSY4305 **Credit Units: 03**

Course objective:
To develop the understanding as to how developmental psychology focuses on the development of individuals across their lifespan within the context of family, peer groups, child-care and after-school programs, schools, neighborhoods, and larger communities and society. It considers the well-being of children, youth, and adults, vis-a-vis the cognitive, emotional, social, academic, and health domains

Course Contents

Module 1: Background of Developmental Psychology
Historical Background
Meaning, Nature and scope
Obstacles in studying Life-Span Development and its effect

Module2: Stages of Development
General Patterns of Development
Stages of Development- Physical, Cognitive, Emotional, Social and Moral

Module 3: Theoretical perspective on Development
Psychodynamic Theories: Freud, Erikson
Social Learning Theory: Albert Bandura
Cognitive Theory: Piaget
Attachment Theory: Bowlby
Socio Cultural Theory: Konrad-Lorens & Niko Tinbergen, Lev Vygotsky
Ecological Theory: Uric Bronfen Brenner
Ethology & Evolutionary Theory

Module 4: Development Related Disorders (DSM-IVTR and I.C.D-10)
Pervasive Developmental Disorder: Autism
Specific Developmental Disorder of Speech and Language
Specific Learning Disabilities-Reading, Spelling, and Arithmetical Disorder
Behavioral Disorders: Attention Deficit Hyperkinetic Disorder, Conduct Disorder, Oppositional defiant Disorder

Module 5: Adjustment Related Issues.
Adolescence: Psychological Hazards, Effects of Immaturity, and happiness in adolescence. Early Adulthood: Social Mobility, Sex-Role Adjustments, Personal & Social Hazards.Middle Age: Adjustment to Physical and mental changes, Vocational and marital hazards.Old Age: Changes in motor and mental abilities, Hazards to Personal and Social Adjustment.

RESEARCH METHODS: NON-EXPERIMENTAL DESIGN

Course Code: PSY4401 **Credit Unit: 02**

Course Objective:
Research Methodology is a way to find out the result of a given problem on a specific matter or problem that is also referred as research problem. In Methodology, researcher uses different criteria for solving/searching the given research problem. Different sources use different type of methods for solving the problem. So this course will enable the student to understand and apply basic research methods in psychology including research design, data analysis and report findings research conclusion apparently based on the parameters of particular research methods.

Course Contents:

Module I: Introduction
Nature and Purpose of Non-Experimental Research Designs and their importance
Advantages and Disadvantages of Non-experimental Research Designs
Differences between Experimental and Non-Experimental Research Designs
Types or Non-experimental Designs: Pure Descriptive design, Correlational Descriptive Design and Other type

Module II: Quasi- Experimental designs
Quasi- experimental research designs: their uses and importance
One-Group Designs
Non-equivalent control group designs
Pretest-Posttest Control Group Design

Module III: Non-Experimental Designs
Quantitative Non-Experimental Designs, Causal Comparative
Qualitative and Quantitative perspectives: Collecting qualitative data: Case study, interview, Observational method. Discourse Analysis, Grand narrative analysis, Ethnographic methodology.
Time series Designs

Module IV: Correlational Designs
Correlational research design: Its Basic nature and uses
Kinds of Correlational designs: Panel Design, Cross-Sectional Design and Longitudinal Designs
Concept and application of Multiple Regression Analysis (linear and stepwise)
Factor analysis and Its Implications

Examination Scheme:

ADVANCE AND APPLIED COUNSELLING SKILLS

Course Code: PSY4403 **Credit Unit: 02**

Course Objective:
This course enables students to gather knowledge about theories of Advanced Counselling Skills. It is further designed to equip students with skills to practice as a Counselling Psychologist.

Course Contents:

Module I: Counsellor as a person

Personal characteristics: A composite model of human effectiveness, role of self awareness in counselling.
Role and Function of the Counsellor: Definition of Role, Generic roles, organizing roles & functions

Module II: Communication Skills – I

Basic Communication Skills: Attending skills, Listening skills, Integrating Listening Skills.
Exploration Skills: Probe, Immediacy, Self-disclosure, Interpretation, Confrontation.
Action Skills: Information giving, Advice giving, Goal setting, Reinforcement, Directives
Self-disclosure by counsellor – when and how
Helping clients develop and work on preferred scenarios, negotiating homework.
Managing resistance and other obstacles in counselling
Skills of closure and terminating

Module III: Techniques of Helping and working with emotions

Self monitoring of Thought, Feeling and Action, Facilitating problem solving
Understanding and Improving Self talk, rules and thinking patterns.
Behavioural Methods

Module IV: Counseling Applications

Pediatric Counseling: Dynamics and process
Adolescent Counselling: Concept and Issues
Group Counselling: Concept & Process.
Academic Counselling: Definition and Scope.
Marital and Family Counselling: Concept & Process.
Addiction counseling: Principles & Prevention
Geriatric Counselling: Concept and Scope.
Rehabilitation Counseling, And Crisis Intervention &Trauma Counseling

Module V: Assessment in psychology

The purpose of assessment in counselling, Assessment principles
Intelligence and general ability testing
Measuring Achievement and aptitude
Appraisal of personality
Spiritual assessment strategies
Applications of assessment: Treatment planning, evaluation and accountability.

PRACTICUM- IV

Course Code: PSY4412 **Credit Units: 03**

Course Objective:

1. To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology experiments.
3. To encourage and guide the students to undertake a small-scale research project.
4. To apply the general concepts of psychology through experimentation and testing

Note: Total 5 practicals will be conducted in the fourth semester among the list of following practicals

Course Content:

1	NEO-4™ - Comprehensive Kit	Personality
2	Comprehensive Test of Non-verbal Intelligence-Second Edition (CTONI-2)	Intelligence
3	Neuropsychological Assessment Battery® (NAB®) Attention Module Kit	Attention
4	Detroit Tests of Learning Aptitude - Fourth Edition (DTLA-4)	Learning
5	Reynolds Intellectual Assessment Scales (RIAS)	Intelligence
6	General Health Questionnaire (GHQ)	Health

DISSERTATION

Course Code: PSY4437 **Credit Units: 06**

GUIDELINES FOR DISSERTATION

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree

The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Selecting the Dissertation Topic
It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:
- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning the Dissertation
This will entail following:
- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline
It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records
This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

Dissertation format
All students must follow the following rules in submitting their dissertation.
- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary.**
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

  Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

  For books, the following details are required:
  Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation:
- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the Assessment of the Dissertation
While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

Assessment Scheme:

Continuous Evaluation: (Based on Abstract, Regularity, Adherence to initial plan, Records etc.)	40%
Final Evaluation: Based on,	60%
Contents & Layout of the Report,	25
Conceptual Framework,	10
Objectives & Methodology and	10
Implications & Conclusions	15

MENTAL RETARDATION

Course Code: PSY4402 **Credit Unit: 03**

Course Objective:
The paper on Mental Retardation introduces nature of mental retardation, its classification, assessment and intervention programs.
Course Contents:

Module I:
Mental Retardation: Definition of mental retardation, Classification-Psychological Classification Medical and Educational Classification, Causes and Prevention

Module II:
Mental Retardation: Psycho-educational Assessment, Intelligence Tests, FACP, BASIC-MR, BASAL-MR

Module III:
Mental Retardation: Enhancing Skills- CTC, IEP, Prompting, Task Analysis, Channing, Shaping, Modeling, Reinforcement

Module IV:
Mental Retardation: Reducing maladaptive behaviours- Assessment of maladaptive behaviours, plan of behavior modification, techniques for decreasing problem behavior.

Module V:
Vocational Training and Empowering families having child with Mental Retardation, Special Sports, Acts and Policies

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

Text & References:

Text:

CHILDHOOD PATHOLOGY AND EXCEPTIONAL CHILDREN

Course Code: PSY4405 **Credit Unit: 03**

Course Objective:

Objective of this course is to learn various categories of exceptionality, early identification, special and mainstream education

Course Contents:

Module I:

Developmental Disorders- Autism Spectrum Disorders, attention deficit hyperactivity disorder, Mental Retardation, Learning Disabilities, Hearing Impairment, Disability of Locomotion

Module II:

Bipolar disorder in children, conduct disorder, emotional disorders, eating disorders, enuresis
Psychological Assessment of Childhood disorders

Module III:

Special Education: Special Schools and Rehabilitation centres
Mainstreaming: assistive devices, adaptation, barrier free environment
Mainstreaming: Attitudinal change- teachers, non disabled students, Parents and Community

Module IV:

National Institutes in the field of disability: NIMH, NIVH, NIOH, AYJNIHH, NIEPMD, SVNIRTAR, Alimbco.
NGOs, Parent Organizations, Advocacy organization

Module V:

Legislative framework: Mental Health Act, RCI Act, Persons with Disability Act, National Trust Act, UNCRPD

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

EMPLOYEE COUNSELING AND EMPOWERMENT

Course Code: PSY4409 **Credit Units: 3**

Course Objective:
To enable students to understand the diversity in organizations and equip them with skills to handle, manage and adjust to a culturally and socially diverse work environment.

Course Contents:
Module I: Mentoring Career
Improving various Professionally & Psychologically Skills, Performance & Capacity Development, Career Planning, Setting Goals, Interview Techniques, and Negotiation Skills

Module II: Work Life Counseling:
Managing work life: key to perform well; remain stress free, happy & successful at work.

- Dealing with Boss, Colleagues & Juniors
- Stress Management, Time Management, Crisis Management
- Enhancing Performance & Will Power
- Work-Life Balance, Motivation & Performance
- Meeting Challenges of Workplace Harassment, Discrimination

Module III: Personal Life Counseling:
Personality Development and Behavioural Management

- Understanding, Improving & Balancing Habits and Behavior
- Identifying Power within self
- Developing EQ & Emotional Intelligence, Developing Positive Psychology
- Utilizing Multiple Intelligence, Confidence Building
- Handling & Eradicating Stress & Phobia, Handling Frustration & Unhappiness
- Handling Ego/ Self Respect, Handling & eradicating Depression & Loneliness

Module IV: Introduction to Employee Counselling
Meaning, Nature & Scope
Types and functions of Employee Counselling
Coaching, Mentoring and Counselling

Module V: Differences and power
Concepts of prejudice, discrimination and oppression
Cultural and ethnicity as dimensions of differences
Race and racism in organizations
Gender and sexism in organization
Sexual orientation, physical ability, age, social class and other differences in workplace

Module VI: Conflict and Negotiation viz Employee Counselling
Concept of Conflict and Negotiation
Importance and relevance of Conflict and Negotiation in Employee Counselling

Module VII: Employee Empowerment and leadership
Change Management, Employee Involvement for Effective Change Management, Leadership Management, Motivation / Recognition / Retention.

ORGANIZATIONAL BEHAVIOR AND INDUSTRIAL RELATIONS

Course Code: PSY4410 **Credit Units: 03**

Course Objective:
To equip students with the basic knowledge of psychological processes in the organizations and skills for using the same for organizational development and to aims at orienting the students to the functions of Industrial relations with relevance to the Indian context.

Course Contents:
Module I: Evolution of management Thought
Organizational Behavior: Definition, goals, fundamental concepts
Concept, Determinants and Models
Historical development of industrial organizational psychology

Module II: Job analysis and selection
Job analysis – Definition and methods – Questionnaire method, checklist method, individual interview method, observation interview method, group method, technical conference method, diary method, work participation method and critical incident method
Selection – Application blank, psychological tests used in selection – Intelligence tests, personality tests, interest tests and aptitude tests (mention two tests in each area). Interview, guided interview, unguided interview, stress interview, group interview.

Module III:
Individual Behavior: Foundation of Individual Behaviour, Personality, Learning, Perception and Attribution, Values and Attitudes, motivation and job performance. Management's assumptions about people.
Group Behavior: Foundation of group behavior, Group Dynamics, Leadership: theories and styles. Conflict: Sources, Patterns, Levels and Resolution. Organizational Power and Politics.

Module IV:
Industrial Relation: Origin, Definition, Scope, Determinant, Socio-Economic, Technical,
Political factors affecting IR in changing Environment, Approaches to the study of IR
–Psychological, Human Relation, Socio,Gandhinian approach &It's Effect on
Management

Module V:
1. Present day industrial worker - comparison with predecessor Industrial disputes: meaning-causes. Importance of good labour management relations-causes of industrial unrest
2. Directive principles of State policy-creating and adopting labour policy.
3. Role of ILO in industrial relations.

Examination Scheme:

PSYCHOLOGICAL PRACTICE IN PERSONNEL AND HUMAN RESOURCE MANAGEMENT

Course Code: PSY4411 **Credit Units: 03**

Course Objective:
To enable students to understand the concepts of psychology as applied in various aspects of human resources in organizations and equip them to develop modules in accordance with the optimum use of the same.

Course Contents:
Module I: The Human Resource Management
Structure of Human Resource Management, Role and Responsibilities of the Human Resource Manager; Human Resource Policies - Formulation and Essentials of Sound HR Policies

Module II: Challenges of Personnel Management: Individual and Competitiveness, balancing organizational demands and employees concerns-metaphors used to manage people.

Module III: Development of Human Resources
Learning, Training, Training and Development, Evaluation and Performance Appraisal

Module IV: Meeting HR requirements
Job Analysis and job Descriptions, diversity and empowered employees, career management and developing diverse talent pool, competency assessment- Perspective and Techniques

Module V: Employment Testing
Testing abilities, Testing personality, Testing skills and achievements, Using and not using tests.

Module VI: Contemporary Issues in HR
Strategic Human Resource Management, International Human
Resource Management Creating High Performing HR Systems: Wellness Programs and Work Life Balance and Green HRM

Examination Scheme:

PARAMETRIC STATISTICAL METHOD

Course Code: PSY4105 **Credit Units: 03**

Course Objective

The Present paper focuses on providing knowledge about the basics of statistics. It will give clear understanding to the students about application of parametric statistical methods. Parametric tests are generally more powerful in that the likelihood (probability) of a test reaching the correct conclusion is greater. Besides this, a module is added in last so to make students aware of parametric statistics in SPSS. Thereby they can understand the procedures and applications of parametric statistics using SPSS.

Course Contents

Module I: Basics

Nature, Meaning and importance of statistics
Concept of Reasoning, population, sample and probability theory in statistical inferences
Categories of statistics: Descriptive and Inferential
Variables and their types
Scales of Measurement: Nominal, Ordinal, Interval, Ratio

Module II: Statistical conjecture

Sampling and its kinds: Probability sampling method and Non-Probability sampling method.
Difference between Objectives and Hypothesis
Hypothesis testing: One-tailed and Two-tailed tests, Type I and Type II errors

Module III: Statistics and Test of Significance

Meaning, concept and importance of determining reliability of statistics in data analysis
Standard error of mean, standard deviations, percentages and correlation coefficients
Significance of difference between means-critical ratio and t-test calculation (large and small sample) assumption & uses
One-Way and Two Way ANOVA.

Module IV: Correlation and Regression

Correlation: concept, types, assumption and Utility of Cor-relational Analysis in Psychological Research
Bi-serial Correlation, Point Bi-serial Correlation, Partial Correlation, Tetra-choric Correlation
Simple and Multiple linear regression, its uses, concepts and assumptions
Difference between Simple linear and multiple regressions

Module V: Introduction to SPSS and parametric statistics in SPSS

Introduction to SPSS, its usage and functioning
Understanding the concepts of Parametric tests in SPSS
Learning data entry

Examination Scheme

PRACTICUM-I

Course Code: PSY4106 **Credit Units: 03**

Course Objective

Present course give practical experience to the students in administering and scoring psychological tests and interpreting the scores to acquaint the students with the basic procedure and design of psychology experiments. Course will also encourage and guide the students to undertake a small-scale research project to apply the general concepts of psychology through experimentation and testing

Note: Total 5 practical will be conducted in the first semester among the list of following practical

Course Content

1	Memory
2	Language
3	Personality
4	Self-Concept
5	Perception
6	Memory and Learning

Examination Scheme

Components	**A**	**File Demonstration**	**Viva**	**EE**
Weightage (%)	5	35	35	25

FIELD PRACTICE-I

Course Code: PSY4107 **Credit Units: 04**

Course Objective

To develop student's skills of observation, collection and documentation of data for conducting theoretically correct and practically relevant research

Methodology

Each student will engage themselves in interaction and observation of psychological processes in a subject/ field of their choice.

Student will then present their findings in the form of a paper for seminar discussions.

Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme

Field/Seminar Report	:	40 marks
Viva-Voce	:	30 marks
Internal Faculty and Interaction	:	10 marks
Presentation/Daily Diary Report	:	20 marks

PSYCHOPATHOLOGY

Course Code: PSY4201 **Credit Units: 03**

Course Objective

To acquaint the students with various manifestations of psychopathology for imparting knowledge and skills required for diagnosis of psychological conditions. To introduce them to different perspectives and models of etiology and also to develop skills required for psychopathological formulation. This course will also enables students to the study and prediction of adaptive and maladaptive behaviours and its processes across lifespan. It also enables students to understand different diagnostic and educational models of psychopathology.

Course Content

Module I: Classification and Theoretical Models

Systems of Classification, basic features; DSM-IV TR, ICD-10, similarities and differences

Major Theoretical Models of Psychopathology: The medical model, Psychoanalytic model, Behaviouristic model, Humanistic-existential models, Interpersonal approach, Systems approach.

Module II: Diagnosis and Prognosis

Problems and methods of diagnosis: physiological examination, observation, case-history, interview method, psycho-diagnostic tests, measures of bodily functions, computer assisted diagnosis.

Module III: Mood and Anxiety Disorder

Bipolar disorders: Manic, Depressive, Mixed

Depressive disorder: Major depression and dysthymia, Suicide

Anxiety Disorders: Generalized anxiety disorder, phobia, panic disorder, post traumatic stress disorder and obsessive compulsive disorder

Module IV: Major Clinical Disorders

Schizophrenia

Other psychotic disorders: Bipolar, Delusional, psychotic depression

Module V: Somatoform Disorders

Conversion disorder, Somatization disorder, Hypochondriasis, Body dysmorphic disorder, Pain disorder

Module VI: Disorders of Infancy, Childhood and Adolescence

Developmental disorder: PDD, Rett Disorder, Asperger Disorder,

Behavioral Disorder: Conduct Disorder, Hyperactivity Disorder, ADHD,

Genetic Disorders: Down Syndrome

Module VII: Personality Disorder

Personality Disorder: Narcissistic Personality, Histrionic Personality, Antisocial (Psychopathic) Personality, Borderline Personality, Paranoid Personality, and Schizotype Personality

Module VIII: Sexuel Dysfunctions and Paraphilias

Dysfunctions of Desire, Arousal, Orgasm and Pain

Paraphilias, Paedophilia and Rape

Gender identity disorders

Impotence and frigidity

Causes, preventing suicide

PSYCHOLOGICAL ASSESSMENT AND DIAGNOSIS

Course Code: PSY4202 **Credit Units: 03**

Course Objective

The course teaches the students about the characteristics, objectives and wide ranging effects of psychological testing. It further describes the various testing methodologies and outlines capabilities and limitations of these methods.

Course Contents

Module I: Introduction

Purpose of testing, types of test used, Bias & Fairness
Ethical Issues in Psychological Testing
Overview of Tests
Norms, Scoring Interpretation and Report Writings
Issues in measurement
Emerging trends of online testing

Module II: Cognitive functions and their assessment

Concept of Attention, Gestalt Theory, Memory and Forgetting, PGI Memory Scale
Theories of Intelligence
Intelligence Tests:Slosson Intelligence Test – Revised For Children and Adults (SIT-3/R)
Bhatia Battery, Weschler's Adult Performance Intelligence Scale (WAPIS) ***BinetKamat Test***
Weschler's Intelligence Scale for Children – Revised (WISC)Wide Range Intelligence Test (WRIT)Alexander Pass-a-long Test of Intelligence
Draw-A-person Intellectual Ability Test for Children, Adolescents and Adults (DAP:IQ)
Raven's Progressive Matrices (Colour Progressive Matrices, Standard Progressive Matrices and Advanced Progressive Matrices)

Module III: Achievement Test

Wechsler Individual Achievement Test (WIAT)
Diagnostic Achievement Test For Adolescents – Second Edition (DATA-2)
Kaufman Test of Educational Achievement (KTEA)
Woodcock-Johnson Tests of Achievement (WJ)

Module IV: Assessment of Personality: Non-Projective Test

Cattell's 16 Personality Factor Inventory (16 PF)
California Q-Sort Tests
Myers Briggs Type Indicator (MBTI)
Minnesota Multiphasic Personality Inventory (MMPI)
Personality Inventory for Children
OMNI Personality Inventory (OMNI)
Bell's Adjustment Inventory
Eysenck'sPersonality Questionnaire
NEO™ Personality Inventory-3 (NEO™-PI-3) Adult / Adolescent

Module V: Assessment of Personality: Projective Tests

Introduction of Projective Techniques
Difference between Projective & Non-Projective Techniques
Thematic Apperception Test
Rorschach Inkblot Test
House-Tree-Person (H-T-P), Sentence Completion Test

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana

NON-PARAMETRIC STATISTICAL METHOD

Course Code: PSY4204 **Credit Units: 03**

Course Objective

The Present paper focuses on providing knowledge about the basics of nonparametric statistics. It will give clear understanding about differences between Parametric & Nonparametric Test Procedures. Paper will also explain commonly used Nonparametric Test Procedures and Perform Hypothesis Tests Using Nonparametric Procedures to teach student how to use SPSS with non-parametric statistics.

Course Contents

Module I: Basics

What is Non-Parametric statistics: Nature, Meaning and Concept strengths and limitations of non-parametric procedures
Parametric VS Non- Parametric Statistics
Four Levels of Measurement and Non-parametric statistics

Module II: Tests of differences between Groups and Variables

The Friedman Two-way analysis of variance by ranks-Basic concepts, uses and computations
Test of differences between groups (Independent samples): Mann-Whitney U test computations, Kolmogorov-Smirnov test, uses
Test of differences between variables (Dependent samples): Kruskal-Wallis ANOVA analysis of ranks, K-Sample Median test, uses and concepts

Module III: Nominal Measures of Correlations

Concept definition assumptions of Nominal Measures of Correlations
The Phi-Coefficient, Contingency coefficient concepts uses and calculations
Tetrachoric**r**: Its uses, computation and comparison

Module IV: Chi-Square

Concept and Definition, its assumptions and use
Chi-Square Goodness of Fit (One-Sample Test)
Chi-Square Test of Independence

Module V: Introduction to SPSS and Non-parametric statistics in SPSS

Introduction to SPSS, its usage and functioning
Understanding the concepts of Non-Parametric tests in SPSS
Learning data entry

Examination Scheme

FIELD PRACTICE-II

Course Code: PSY4208 **Credit Units: 04**

Course Objective

To develop, in students the skills of observation, collection and documentation of data for conducting theoretically correct and practically relevant research

Methodology

Each student will engage themselves in interaction and observation of psychological processes in a subject/ field of their choice.

Student will then present their findings in the form of a paper for seminar discussions.

Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme

Field/Seminar Report	:	40 marks
Viva-Voce	:	30 marks
Internal Faculty and Interaction	:	10 marks
Presentation/Daily Diary Report	:	20 marks

SCIENTIFIC RESEARCH PAPER

Course Code: PSY4209 **Credit Units: 01**

Course Objective

The scientific research papers for Masters Students is to enhance the reading and writing habits of the students and to make them aware about the process of carrying out a research work. This helps them to develop insight into the course they are studying which creates an academic interest among the students. Presentation of the term paper plays an important role as it facilitates knowledge sharing and improvement in presentation skills which will further enhance the confidence of the students. The overall objective of this term paper is to develop research orientations in students and to make them understand and enhance skills in Research Methodology.

APPLIED PSYCHOTHERAPY

Course Code: PSY4310 **Credit Units: 03**

Course Objectives

To provide knowledge and skills to students about counseling and psychotherapy and also to train them in using therapeutic and counseling techniques for effectively practicing

Course Contents

Module I: Basic Counseling and Psychotherapeutic Skills

Basic Skills: Empathy, Genuineness, unconditional positive regard, congruence, Listening, Paraphrasing, reflecting, summarizing

Advanced Skills: interpretation, insight, transference interpretation, exploring projections, identifying failure of therapy, identifying working with burnout, self-supervision, confrontation

Characteristics of effective counselor/ therapists

Challenges faced by novice

therapists: Dealing with anxiety, being oneself, self-disclosure, avoiding perfectionism, honesty with limitations, understanding silence, demands from clients; Understanding once own self and Psychotherapy with self

Module II: **Therapeutic assessment and counseling session initiation**

Therapeutic assessment, History taking, and Formulation, setting goals

Contracting and its implications: Contracting for therapyand socialization, communicating ethical and professional rights responsibilities, violations of contract, Initial session, crisis and support , Counseling session's opening and closing skills, Effective conduction of counseling sessions

Module III: Counseling and Psychotherapy Process

Initial phase: Psych- education, Supportive psychotherapy. Selecting techniques

Ice-breaking, exploration, Loss framework.

Dealing with Resistance: Techniques and applications

Transference and counter-transference

Module IV: Termination, Follow-up and Documentation

Termination: Evaluating and sharing progress, Issues in termination and resolution Follow-up: Systems and techniques, sustained changes

Documentation: Therapists documentation, Communication with other professionals and referrals

Legal implications: Legal communication, documentation, Legal issues in psychotherapy and counselling .

Module V: Therapeutic Case formulation and Demonstration

Two Hypothetical case formulation and demonstration by using

Role play (video recorded), evaluation of basic and advanced skills for simulated cases, Two Hypothetical case formulation and demonstration by using

Role play (video recorded) for contracting and skills for opening and closing,

RESEARCH METHODS IN APPLIED PSYCHOLOGY

Course Code: PSY4311 **Credit Unit: 02**

Course Objective

Research Methodology is a way to find out the result of a given problem on a specific matter or problem that is also referred as research problem. In Methodology, researcher uses different criteria for solving/searching the given research problem. Different sources use different type of methods for solving the problem. So this course will enable the student to understand and apply basic research methods in psychology including research design, data analysis and report findings research conclusion apparently based on the parameters of particular research methods.

Course Contents

Module I: Introduction to Research

Meaning of Scientific Research
Objectives and Steps in Scientific Research
Defining research problem
Defining variables
Developing hypothesis

Module II: Evaluating Measures and Hypothesis

Need For Evaluating Measures
Reliability and Validity
Hypothesis testing: Type1 and Type 2
Going beyond hypothesis testing: Effect size and Power

Module III: Validity of Experimental Researches and Threats to them

Statistical Conclusion validity
Construct validity and External Validity
Establishing the cause and Effect
Single Group threat, Multiple Group threats, Social threats

Module IV: Experimental Designs-I

Two-Group experimental designs Within-subject Design
Between-subject design
General Linear Model

Module V: Experimental Designs-II

Factorial designs
Randomized Block designs
Hybrid Experimental Designs: Soloman four group designs Mixed designs

Examination Scheme

INTERVIEWING AND COUNSELLING SKILLS

Course Code: PSY4312 **Credit Unit: 02**

Course Objective

This course enables students to gather knowledge about interview techniques and cultivate Advanced Counselling Skills. It is further designed to equip students with skills to practice as a Counselling Psychologist.

Course Contents

Module I: Counsellor as a person

Personal characteristics: A composite model of human effectiveness, role of self awareness in counselling.

Role and Function of the Counsellor: Definition of Role, Generic roles, organizing roles & functions

Module II: Communication Skills-I

Basic Communication Skills: Attending skills, Listening skills,Integrating Listening Skills.

Exploration Skills: Probe, Immediacy, Self-disclosure, Interpretation, Confrontation.

Action Skills: Information giving, Advice giving, Goal setting, Reinforcement, Directives

Self-disclosure by counsellor – when and how

Helping clients develop and work on preferred scenarios, negotiating homework.

Managing resistance and other obstacles in counselling

Skills of closure and terminating

Module III: Techniques of Helping and working with emotions

Self monitoring of Thought, Feeling and Action, Facilitating problem solving

Understanding and Improving Self talk, rules and thinking patterns.

Behavioural Methods

Module IV: Counseling Applications

Pediatric Counseling: Dynamics and process

Adolescent Counselling: Concept and Issues

Group Counselling: Concept & Process.

Academic Counselling: Definition and Scope.

Marital and Family Counselling: Concept & Process.

Addiction counseling: Principles & Prevention

Geriatric Counselling: Concept and Scope.

Rehabilitation Counseling, And Crisis Intervention &Trauma Counseling

Module V: Assessment in psychology

The purpose of assessment in counselling, Assessment principles

Intelligence and general ability testing

Measuring Achievement and aptitude

Appraisal of personality

Spiritual assessment strategies

Applications of assessment: Treatment planning, evaluation and accountability.

PRACTICUM-III

Course Code: PSY4308 **Credit Units: 03**

Course Objective

To give practical experience to the students in administering and scoring psychological tests and interpreting the scores and to acquaint the students with the basic procedure and design of psychology experiments and also to encourage and guide the students to undertake a small-scale research project to apply the general concepts of psychology through experimentation and testing

Note: Total 5 Practical will be conducted in the third semester among the list of following Practical

Course Content

1	Psychosocial Development
2	Self Esteem
3	State Trait Anger
4	Personality
5	Family and Interpersonal Relationship
6	Intelligence

FIELD PRACTICE-III

Course Code: PSY4309 **Credit Units: 04**

Course Objective

To cultivate the observation skills and techniques among students to gather and collect information from clients and documentation of data for conducting theoretically correct and practically relevant research

Methodology

Each student will engage themselves in interaction and observation of psychological processes in a subject/ field of their choice.
Student will then present their findings in the form of a paper for seminar discussions.
Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme

Field/Seminar Report	:	40 marks
Viva-Voce	:	30 marks
Internal Faculty and Interaction	:	10 marks
Presentation/Daily Diary Report :	:	20 marks

SUMMER INTERNSHIP EVALUATION

Course Code: PSY4335 **Credit Units: 06**

GUIDELINES FOR INTERNSHIP FILE AND INTERNSHIP REPORT

(These guidelines will be useful for undertaking an internship programme during the summer or at any other time wherein the student/ researcher works full time with a company/organisation)

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship programme can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal class room situations. These attributes are intellectual ability, professional judgment and decision making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain and submit a file **(Internship File)** and a report **(Internship Report)**.

INTERNSHIP FILE

The Internship File aims to encourage students to keep a personal record of their learning and achievements throughout the Programme. It can be used as the basis for lifelong learning and for job applications. **Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.**

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and his/her own personal contribution to the organization.

The File is essentially a comprehensive documentation of how one proceeds while working on the assignment and should be regularly checked by the faculty guide/ supervisor, issues discussed with the students, doubts if any clarified and signed as having done so. This will form the basis of continuous evaluation of the project.

The File will include five sections in the order described below.

1. The Title Page – An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. Table of Content – An outline of the contents of the file by topics and subtopics with the page number and location of each section.
3. Introduction – Short, but should include how and why you obtained the internship experience position and the relationship it has to your academic/professional and career goals.
4. Main Body – Should include a brief summary/ executive summary of the Internship Project Report that the student has worked on, an analysis of the company/organization in which the student is working, a personal review of the student's management skills and how they have been developed through the programme, the daily tasks performed, major projects contributed to, dates and hours spent on a task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.
5. Appendices – Include pamphlets, forms, charts, brochures, technical and descriptive literature, graphs and other information related to your Internship experience.

Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

INTERNSHIP REPORT

The **Internship Report** is the research report that the student has to prepare on the project assigned by the organization. (Incase a student is not assigned a specific research project in the organization, he has to select any one aspect of the organization and prepare a research report on it). The lay out of the report should be as per the standard layout prescribed by the organization wherein the student undertakes the Internship. In case, there is no layout prescribed by the organization the following components should be included in the report:

- Title or Cover Page. The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.
- Acknowledgements Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.
- Abstract A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.
- Table of Contents Titles and subtitles are to correspond exactly with those in the text.
- Introduction Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.
- Materials and Methods This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.
- Results and Discussion Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various secions, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporing or contradicting the present case of research.

Conclusion(s) & Recommendations

A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Implications for Future Research

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

- **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

- **References**

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

The Layout Guidelines for the Internship File & Internship Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Assessment Scheme:

Continuous Evaluation: 30%

(based on Internship File and the observations of the faculty guide/ supervisor)

Feedback from Company/ Organization: 10%

Final Evaluation:

(Based on Internship Report, Viva/ Presentation) 60%

APPLIED PSYCHOPHYSIOLOGY AND BIOFEEDBACK

Course Code: PSY4313 **Credit Units: 03**

Course Objectives

To familiarize the students with various approaches, techniques and skills of counselling and psychotherapy in mental health problems To prepare the students to conduct different types of counselling and psychotherapies with different clinical and sub-clinical population To help them in identifying the processes of therapy and therapeutic change in the client and to enable them to conduct research in psychotherapy and report the findings

Course Contents

Module I: Introduction

Conceptual Issues, Client Variables in Counseling and Psychotherapy, Processes and Techniques of Psychotherapy

Module II: Modalities of Psychotherapy

Gestalt Therapy; Experiential and Transpersonal Psychotherapies, Art Therapy, Play Therapy, Family Therapy, Yoga and Other Indegenious therapies, Research Designs, Issues and Evaluation.

Module- III: Applied Research

Research in Psychotherapy: Experimental and Quasi-experimental designs. Ethical Issues in Psychotherapy

Module IV: Institutional visit

Supervised Practicum: Students will be provided demonstrations in the laboratory setting and visit institutions providing specialized services and produce at least 2 case records. 10 Hrs.

Examination Scheme

HUMAN FACTORS PSYCHOLOGY AND ERGONOMICS

Course Code: PSY4314 **Credit Units: 03**

Course Objective

To gain an understanding of human strengths and limitations by studying human perception, cognition, memory, attention, biomechanics, and motor control/learning and also to gain an understanding of guidelines for displays, controls, anthropometry, office ergonomics, work physiology, and manual material handling.

Course contents

Module I: Introduction to Human Factor Psychology

Introduction to Human Factor Psychology and Ergonomics, Historical foundations, Biological basis of psychology and sensation, Human Information Processing

Module II: Visual system and Auditory and tactile systems

Visual system: sensation vs. perception (depth perception, motion perception, and pattern recognition), color vision, visual search, perceptual speed, perceptual organization, visual display. Auditory and tactile systems: audition and touch, RSI (Repetitive Strain Injury), designing for hearing and touch, haptic/tactile interfaces.

Module III: Memory and attention

Memory and attention: theories of attention, selective/divided attention, Multiple Resource Theory, reasoning, decision making, designing for memory.

Module IV: Performance measurement

Performance measurement: Psychometric tests (Simple/Choice Reaction Time tests, digit/word span, other visuo-spatial and cognitive tests, etc), Fitts' Law, Hicks' Law, quantitative and qualitative methods. Workload management: mental workload, stress, fatigue and coping.

Module V: Ergonomics science in a glance

Ergonomics science in a glance: introduction to anthropometry, work physiology and biomechanics.

Examination Scheme

Components	CT	CT/H/P/V/Q	CT	A	EE

FORENSIC AND LEGAL PSYCHOLOGY

Course Code: PSY4315 **Credit Units: 03**

Course Objectives

To introduce the students with knowledge and techniques of forensic psychology and further providing training in identification of criminals and forensic verification by using psychological methods

Course Contents

Module I: Introduction to forensic Psychology
Forensic Psychology: Introduction and overview, Historical Perspective, Fields of Forensic Psychology, Education and Training.

Module II: Criminal and Investigative Psychology
Criminal and Investigative Psychology: Police Psychology, Mental and Aptitude testing, Personality assessment. Occupational stress in Police and investigation, Hostage taking Police interrogation and false confession Criminal of Psychological autopsy, Geographical profiling and mental manpower, Criminal Identification

Module III: Violence and sexual offences
Psychological impacts of violence and sexual offences, Post-traumatic stress disorder, Family violence and victimization, Psychology of the bystanders 1

Module IV: Correctional Psychology
Correctional Psychology: Legal rights of inmates: Rights to treatment, Right top refuse treatment, Inmates with mental disorders, Solitary confinement, Psychological assessment in correction, Psychological methods of correction, Treatment of sexual offenders, Community-based correction, Group homes, Family preservation model, Substance abuse model, Prevention of violence.

COMMUNITY PSYCHOLOGY

Course Code: PSY4316 **Credit Units: 03**

Course Objectives

To acquaint the students about the history & present status of community mental health services and also to develop a community based orientation towards mental health.

Course Contents

Module I: Introduction to Community Psychology

Historical and social contexts of community psychology: concept, evolution, scope and nature of community mental health.

Module II: Mental Health Models

Models of mental health services: mental, social, organizational and ecological

Module III: Community mental health intervention and rehabilitation

Community mental health intervention and community based rehabilitation (CBR): Issues, principles and programmes; evaluation of CBR; training the para-professional and non-professionals.

Module IV:

Community mental health in India: Prospects, Issues & challenges, Legal issues in mental health, role of NGO, Govt. and hospitals in mental health in India

Examination Scheme

Components	CT	CT/H/P/V/Q	CT	A	EE

PSYCHOLOGICAL PRACTICE IN PERSONNEL AND HUMAN RESOURCE MANAGEMENT

Course Code: PSY4317 **Credit Units: 03**

Course Objective
To enable students to understand the concepts of psychology as applied in various aspects of human resources in organizations and equip them to develop modules in accordance with the optimum use of the same.

Course Contents
Module I: The Human Resource Management
Structure of Human Resource Management, Role and Responsibilities of the Human Resource Manager; Human Resource Policies - Formulation and Essentials of Sound HR Policies

Module II: Challenges of Personnel Management: Individual and Competitiveness, balancing organizational demands and employees concerns-metaphors used to manage people.

Module III: Development of Human Resources
Learning, Training, Training and Development, Evaluation and Performance Appraisal

Module IV: Meeting HR requirements
Job Analysis and job Descriptions, diversity and empowered employees, career management and developing diverse talent pool, competency assessment- Perspective and Techniques

Module V: Employment Testing
Testing abilities, Testing personality, Testing skills and achievements, Using and not using tests.

Module VI: Contemporary Issues in HR
Strategic Human Resource Management, International Human
Resource Management Creating High Performing HR Systems: Wellness Programs and Work Life Balance and Green HRM

Examination Scheme

REHABILITATION PSYCHOLOGY

Course Code: PSY4404 **Credit Units: 03**

Course Objective
Objective of this course is to learn profession of Rehabilitation Psychology, Psychological Assessment of persons with disabilities, Psychological Interventions and dealing with families

Course Contents

Module I: Introduction
Overview of the profession of Rehabilitation Psychology and practice, history, growth and scope, Role of Psychologist in Rehabilitation

Module II: Psychological Assessment
Psychological Assessment- Assessment of Cognition, aptitudes, psychopathology, work/vocational and daily functioning

Module III: Health Behavior
Health behavior: Theories of health behavior change, interventions strategies for individuals and families of disabled
Behaviour Modification and Cognitive Therapies in Rehabilitation

Module IV: Families and disability
Dealing with Families- Family's reactions to disabilities, coping styles, family counseling, Coordination with Multidisciplinary team

Module V: Community Based Rehabilitation
Community Based Rehabilitation – Goals of CBR, components of CBR, Role of Professionals, role of Community, Ethical Issues

Examination Scheme

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	7	10	8	5	70

CT: Class Test, H: Home Assignment, P/V/Q: Presentation/Viva/Quiz, A: Attendance,
EE: End Semester Examination

PSYCHOMETRICS

Course Code: PSY4415 **Credit Units: 02**

Course Objectives

To acquaint students with advanced topics in psychometrics by supporting them in using the advanced psychometric models with psychometric data and also train students in writing report of the psychometric techniques

Course Contents

Module I: Psychometrics

Psychometrics: Concepts, Classical Test Theory and PracticingPsychometrics, Scaling, statistical concept s, Reliability: Conceptual basis and empirical estimation
Validity: Conceptual basis and empirical estimation, factor analysis and test dimensionality
Classical test theory: assumptions, ramification and practice
Threats to psychometric quality: Test bias, response bias. Special problems in CCT

Module II: Modern test Theory and Practice

Item Response Theory (IRT): basic concepts, models and estimations; Item and Item information;
Models for Nominal and graded responses, Nonparametric and Bayesian approach
Other IRT models and applications to non standard testing conditions

Module III: Generalizability Theory

Concepts, Generalizability and variance component G studies and D studies
Conducting and Interpreting Generalizability: One Facet design, two facet design, other designs.

Module IV: Applications

Psychometric Assessment in Occupational Settings.
Psychometric Clinical Assessment
Psychometrics in Educational Settings
Developing publication quality instrument and manual

Module V: **Presentations**

Multidimensional scaling,Profile analysis,Descriminant analysis,Software applications: R in particular;
Dominance (preference) scaling , Categorical modeling, Binary classifications;
Non-geometric and non Euclidian model, Confirmatory Factor analysis

Examination Scheme

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	7	10	8	5	70

CT: Class Test, H: Home Assignment, P/V/Q: Presentation/Viva/Quiz, A: Attendance,

PRACTICUM-IV

Course Code: PSY4412 **Credit Units: 03**

Course Objective

To give practical experience to the students in administering and scoring psychological tests and interpreting the scores Also to acquaint the students with the basic procedure and design of psychology experiments Course will also encourage and guide the students to undertake a small-scale research project to apply the general concepts of psychology through experimentation and testing

Note: Total 5practicals will be conducted in the fourth semester among the list of following practicals

Course Content

1	Personality
2	Intelligence
3	Attention
4	Learning
5	Intelligence
6	Health

Examination Scheme

Components	A	File Demonstration	Viva	EE
Weightage (%)	5	35	35	25

FIELD PRACTICE-IV

Course Code: PSY4413 **Credit Units: 04**

Course Objective

To develop, in students the skills of observation, collection and documentation of data for conducting theoretically correct and practically relevant research

Methodology

Each student will engage themselves in interaction and observation of psychological processes in a subject/ field of their choice.

Student will then present their findings in the form of a paper for seminar discussions.

Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme

Field/Seminar Report	:	40 marks
Viva-Voce	:	30 marks
Internal Faculty and Interaction	:	10 marks
Presentation/Daily Diary Report	:	20 marks

DISSERTATION

Course Code: PSY4437 **Credit Units: 06**

GUIDELINES FOR DISSERTATION

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree

The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Selecting the Dissertation Topic
It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:
- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning the Dissertation
This will entail following:
- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline
It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan
- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records
This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

Dissertation format
All students must follow the following rules in submitting their dissertation.
- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary.**
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

  Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

  For books, the following details are required:
  Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation:
- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Guidelines for the Assessment of the Dissertation
While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

Assessment Scheme:

Continuous Evaluation: (Based on Abstract, Regularity, Adherence to initial plan, Records etc.)	40%
Final Evaluation: Based on,	60%
Contents & Layout of the Report,	25
Conceptual Framework,	10
Objectives & Methodology and	10
Implications & Conclusions	15

EMPLOYEE COUNSELLING AND EMPOWERMENT

Course Code: PSY4409 **Credit Units: 3**

Course Objective

To enable students to understand the diversity in organizations and equip them with skills to handle, manage and adjust to a culturally and socially diverse work environment.

Course Contents

Module I: Mentoring Career

Improving various Professionally & Psychologically Skills, Performance & Capacity Development, Career Planning, Setting Goals, Interview Techniques, and Negotiation Skills

Module II: Work Life Counseling

Managing work life: key to perform well; remain stress free, happy & successful at work.
Dealing with Boss, Colleagues & Juniors
Stress Management, Time Management, Crisis Management
Enhancing Performance & Will Power
Work-Life Balance, Motivation & Performance
Meeting Challenges of Workplace Harassment, Discrimination

Module III: Personal Life Counseling

Personality Development and Behavioural Management

Understanding, Improving & Balancing Habits and Behavior
Identifying Power within self
Developing EQ & Emotional Intelligence, Developing Positive Psychology
Utilizing Multiple Intelligence, Confidence Building
Handling & Eradicating Stress & Phobia, Handling Frustration & Unhappiness
Handling Ego/ Self Respect, Handling & eradicating Depression & Loneliness

Module IV: Introduction to Employee Counselling

Meaning, Nature & Scope
Types and functions of Employee Counselling
Coaching, Mentoring and Counselling

Module V: Differences and power

Concepts of prejudice, discrimination and oppression
Cultural and ethnicity as dimensions of differences
Race and racism in organizations
Gender and sexism in organization
Sexual orientation, physical ability, age, social class and other differences in workplace

Module VI: Conflict and Negotiation viz Employee Counselling

Concept of Conflict and Negotiation
Importance and relevance of Conflict and Negotiation in Employee Counselling

Module VII: Employee Empowerment and leadership

Change Management, Employee Involvement for Effective Change Management, Leadership Management, Motivation / Recognition / Retention.

PSYCHOLOGY OF SELLING, MARKETING AND ADVERTISING

Course Code: PSY4416 **Credit Units: 03**

Course Objectives

To impart the basic knowledge of main psychological theories that is relevant within the field of market psychology among students. How does psychology apply to marketing? Clearly, psychology and marketing are closely related. As a marketing strategist, you need be looking less at what your product has to offer per se and more to the psychology of the consumers to whom you want to sell it.

Course contents

Module I: Introduction

Understanding selling, marketing, advertising Psychology, Nature, scope and need , marketing, advertising Psychology of application of psychology principles in selling, marketing and advertising, The Monkey Business Illusion

Module II: Cognitive Skills: Disciplinary & Cultural Knowledge

Field of psychology complements the field of marketing Identify, main psychological theories and consumer behaviour, Judgment heuristics, rules of perception and marketing psychology, Role of personality, emotions, and motivation in consumer behaviour, Host-city manifestations of the influence of psychology on local consumer

Module III: Analytical Skills: Critical Thinking in Oral & Written Work

Marketing techniques in psychology, Importance of emotions in advertising campaigns, Work of locus of control in your own self-control

Module IV: Affective Skills: Attitudinal & Intrapersonal

Develop and convey empathy for the host peoples' attitudes towards consumption, Curiosity and Interface between marketing and psychology, Respond to psychology of marketing on critical-analytical levels and develop an open mind regarding local consumer habits

Module V: Behavioral Skills: Cultural Engagement & Interpersonal

Knowledge of psychology to become a more aware and self-directed consumer, Use course-related criteria when purchasing you consumer good in the host country, Knowledge of marketing psychology to engage positively with host people & culture

PSYCHOLOGY OF CRIMINAL BEHAVIOUR AND CRIMINAL PROFILING

Course Code: PSY4417 **Credit Units: 03**

Course Objectives

To familiarize students with the emerging importance of psychology of criminal behaviour and criminal profiling and also to build awareness regarding the role of the psychologist in Forensic evaluations.

Course Contents

Module I: **Bases of criminal behavior**

Biological and psychological basis of criminal behavior
Theoretical models in Forensic psychology
Place of psychology in forensic science
Ethical principles and professional competencies

Module II: **Forensic assessment**

Empirical profiling of psychopathy
Detection of Malingering and Deception
Use of Brain Electrical Oscillation Signature (BEOS)
Psychology and law : custody issues, testimony, documentation

Module III: **Civil forensic procedures**

Eye witness memory
Jury selection
Child custody
Evaluation of child trauma

Module IV: Criminal Forensic procedures

Forensic evaluation of delinquency and criminal responsibility
Child sexual abuse evaluations
Violence risk assessment
Competence to stand trial

Examination Scheme

GUIDANCE AND COUNSELLING

Course Code: PSY4419 **Credit Units: 03**

Course Objectives

This course enables students to gather knowledge about techniques of guidance and Counselling. It is further designed to equip students to practice these learned skills in their day to day life.

Module I: Introduction

Concept of Guidance and Counseling Meaning, Nature, Goals and Principles; Need and Relevance Emergence and Growth of Guidance and Counseling Psychology; Guidance and counseling Movement in India Ethical and legal considerations

Module II: Oragnization of Programme

Organizing a Guidance Programme Principles of organizing an effective guidance program; Guidance activities at Elementary, Secondary and Senior Secondary level Meaning & Importance of Counseling Skills & Strategies; Stages of Counseling

Module III: Educational Guidance

Educational Guidance Nature, Pupil Personnel work, Pupil Appraisal information, School Curriculum and Guidance. Vocational Guidance Nature, Study of Occupations- Collecting and Disseminating occupational information; Theories of occupation choice Role of counselor in education and vocational guidance

Module IV: Counseling skills

Developing Empathy, rapport establishment, respect and genuineness Skills of Counselor Selection, implementation, evaluation, Observation, listening, silence, attending behaviour, use of questions & termination of counselling.

Module V: Approaches of Counseling

Approaches of Counseling: Directive, Non-directive and Eclectic. Guidance Personel in organizing Guidance Programmes,Theories of multicultural counseling: identity development, and social justice, Theories and models of individual, cultural, couple, family, and community resilience.

PARAMETRIC STATISTICAL METHOD

Course Code: PSY4105 **Credit Units: 03**

Course Objective:
The Present paper focuses on providing knowledge about the basics of statistics. It will give clear understanding to the students about application of parametric statistical methods. Parametric tests are generally more powerful in that the likelihood (probability) of a test reaching the correct conclusion is greater. Besides this, a module is added in last so to make students aware of parametric statistics in SPSS. Thereby they can understand the procedures and applications of parametric statistics using SPSS.

Course Contents:
Module I: Basics
Nature, Meaning and importance of statistics
Concept of Reasoning, population, sample and probability theory in statistical inferences
Categories of statistics: Descriptive and Inferential
Variables and their types
Scales of Measurement: Nominal, Ordinal, Interval, Ratio

Module II: Statistical conjecture
Sampling and its kinds: Probability sampling method and Non-Probability sampling method.
Difference between Objectives and Hypothesis
Hypothesis testing: One-tailed and Two-tailed tests, Type I and Type II errors

Module III: Statistics and Test of Significance
Meaning, concept and importance of determining reliability of statistics in data analysis
Standard error of mean, standard deviations, percentages and correlation coefficients
Significance of difference between means-critical ratio and t-test calculation (large and small sample) assumption & uses
One-Way and Two Way ANOVA.

Module IV: Correlation and Regression
Correlation: concept, types, assumption and Utility of Cor-relational Analysis in Psychological Research
Bi-serial Correlation, Point Bi-serial Correlation, Partial Correlation, Tetra-choric Correlation
Simple and Multiple linear regression, its uses, concepts and assumptions
Difference between Simple linear and multiple regressions

Module V: Introduction to SPSS and parametric statistics in SPSS
Introduction to SPSS, its usage and functioning
Understanding the concepts of Parametric tests in SPSS
Learning data entry

PRACTICUM- I

Course Code: PSY4106 **Credit Units: 03**

Course Objective:

- To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
- To acquaint the students with the basic procedure and design of psychology experiments.
- To encourage and guide the students to undertake a small-scale research project.
- To apply the general concepts of psychology through experimentation and testing

Note: Total 5 practicals will be conducted in the first semester among the list of following practicals

Course Content:

1	Continuous Visual Memory Test (CVMT)	Memory
2	Illinois Test of Psycholinguistic Abilities – Third Edition (ITPA-3)	Language
3	16 PF Questionnaire - Fifth Edition with Hand scoring	Personality
4	Tennessee Self-Concept Scale - Second Edition (TSCS:2)	Self-Concept
5	Developmental Test of Visual Perception – Adolescence and Adult	Perception
6	Test of Memory and Learning – Second Ed. (TOMAL-2)	Memory and Learning

Examination Scheme:

Components	A	File Demonstration	Viva	EE
Weightage (%)	5	35	35	25

FIELD PRACTICE-I

Course Code: PSY4107 **Credit Units: 04**

Course Objective:
To develop, in students the skills of observation, collection and documentation of data for conducting theoretically correct and practically relevant research

Methodology

Each student will engage themselves in interaction and observation of psychological processes in a subject/ field of their choice.
Student will then present their findings in the form of a paper for seminar discussions.
Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme:

Field/Seminar Report	:	40 marks
Viva-Voce	:	30 marks
Internal Faculty and Interaction	:	10 marks
Presentation/Daily Diary Report	:	20 marks

PSYCHOPATHOLOGY

Course Code: PSY4201 **Credit Units: 03**

Course Objective:

- To acquaint students with various manifestations of psychopathology
- To impart knowledge and skills required for diagnosis of psychological conditions.
- To introduce them to different perspectives and models of etiology.
- To develop skills required for psychopathological formulation.

This course enables students to the study and prediction of adaptive and maladaptive behaviours and its processes across lifespan. It also enables students to understand different diagnostic and educational models of psychopathology.

Course Content:

Module I: Classification and Theoretical Models

Systems of Classification, basic features; DSM-IV TR, ICD-10, similarities and differences

Major Theoretical Models of Psychopathology: The medical model, Psychoanalytic model, Behaviouristic model, Humanistic-existential models, Interpersonal approach, Systems approach.

Module II: Diagnosis and Prognosis

Problems and methods of diagnosis: physiological examination, observation, case-history, interview method, psycho-diagnostic tests, measures of bodily functions, computer assisted diagnosis.

Module III: Mood and Anxiety Disorder

Bipolar disorders: Manic, Depressive, Mixed

Depressive disorder: Major depression and dysthymia, Suicide

Anxiety Disorders: Generalized anxiety disorder, phobia, panic disorder, post traumatic stress disorder and obsessive compulsive disorder

Module IV: Major Clinical Disorders

Schizophrenia

Other psychotic disorders: Bipolar, Delusional, psychotic depression

Module V: Somatoform Disorders

Conversion disorder, Somatization disorder, Hypochondriasis, Body dysmorphic disorder, Pain disorder

Module VI: Disorders of Infancy, Childhood and Adolescence

Developmental disorder: PDD, Rett Disorder, Asperger Disorder,

Behavioral Disorder: Conduct Disorder, Hyperactivity Disorder, ADHD,

Genetic Disorders: Down Syndrome

Module VII: Personality Disorder

Personality Disorder: Narcissistic Personality, Histrionic Personality, Antisocial (Psychopathic) Personality, Borderline Personality, Paranoid Personality, and Schizotype Personality

Module VIII: Sexual Dysfunctions and Paraphilias

Dysfunctions of Desire, Arousal, Orgasm and Pain

Paraphilias, Paedophilia and Rape

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Gender identity disorders
Impotence and frigidity
Causes, preventing suicide

Examination Scheme:

PSYCHOLOGICAL ASSESSMENT AND DIAGNOSIS

Course Code: PSY4202 **Credit Units: 03**

Course Objective:
The course teaches the students about the characteristics, objectives and wide ranging effects of psychological testing. It further describes the various testing methodologies and outlines capabilities and limitations of these methods.

Course Contents:
Module I: Introduction
Purpose of testing, types of test used, Bias & Fairness
Ethical Issues in Psychological Testing
Overview of Tests
Norms, Scoring Interpretation and Report Writings
Issues in measurement
Emerging trends of online testing

Module II: Cognitive functions and their assessment

Concept of Attention, Gestalt Theory, Memory and Forgetting, PGI Memory Scale
Theories of Intelligence
Intelligence Tests:
- **Slosson Intelligence Test** – Revised For Children and Adults (SIT-3/R)
- Bhatia Battery
- Weschler's Adult Performance Intelligence Scale (WAPIS)
- Raven's Progressive Matrices (Colour Progressive Matrices, Standard Progressive Matrices and Advanced Progressive Matrices)
- Binet Kamat Test
- Weschler's Intelligence Scale for Children – Revised (WISC)
- Wide Range Intelligence Test (WRIT)
- Alexander Pass-a-long Test of Intelligence
- Draw-A-person Intellectual Ability Test for Children, Adolescents and Adults (DAP:IQ)

Module III: Achievement Test
- Wechsler Individual Achievement Test (WIAT)
- **Diagnostic Achievement Test For Adolescents – Second Edition (DATA-2)**
- Kaufman Test of Educational Achievement (KTEA)
- Woodcock-Johnson Tests of Achievement (WJ)

Module IV: Assessment of Personality: Non-Projective Test
- Cattell's 16 Personality Factor Inventory (16 PF)
- California Q-Sort Tests
- Myers Briggs Type Indicator (MBTI)
- Minnesota Multiphasic Personality Inventory (MMPI)
- **Personality Inventory for Children**
- **OMNI Personality Inventory (OMNI)**
- Bell's Adjustment Inventory
- Eysenck's Personality Questionnaire
- NEO™ Personality Inventory-3 (NEO™-PI-3) Adult / Adolescent

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module V: Assessment of Personality: Projective Tests
Introduction of Projective Techniques
Difference between Projective & Non-Projective Techniques
Thematic Apperception Test
Rorschach Inkblot Test
House-Tree-Person (H-T-P)
Sentence Completion Test

Module VI: Developmental Scales
Developmental Screening Test
Vineland's Social Maturity Scale
Measures of Psychosocial Development (MPD)
Gesells' Developmental Schedule

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

NON-PARAMETRIC STATISTICAL METHOD

Course Code: PSY4204 **Credit Units: 03**

Course Objective: The Present paper focuses on providing knowledge about the basics of nonparametric statistics. It will give clear understanding about differences between Parametric & Nonparametric Test Procedures. This paper will

1. Explain commonly used Nonparametric Test Procedures.
2. Perform Hypothesis Tests Using Nonparametric Procedures.
3. Going to teach student how to use SPSS with non-parametric statistics.

Course Contents:

Module 1: Basics

What is Non-Parametric statistics: Nature, Meaning and Concept strengths and limitations of non-parametric procedures
Parametric VS Non- Parametric Statistics
Four Levels of Measurement and Non-parametric statistics

Module 2: Tests of differences between Groups and Variables

The Friedman Two-way analysis of variance by ranks-Basic concepts, uses and computations
Test of differences between groups (Independent samples): Mann-Whitney U test computations, Kolmogorov-Smirnov test, uses
Test of differences between variables (Dependent samples): Kruskal-Wallis ANOVA analysis of ranks, K-Sample Median test, uses and concepts

Module 3: Nominal Measures of Correlations

Concept definition assumptions of Nominal Measures of Correlations
The Phi-Coefficient, Contingency coefficient concepts uses and calculations
Tetrachoric**r**: Its uses, computation and comparison

Module 4: Chi-Square

Concept and Definition, its assumptions and use
Chi-Square Goodness of Fit (One-Sample Test)
Chi-Square Test of Independence

Module 5: Introduction to SPSS and Non-parametric statistics in SPSS

Introduction to SPSS, its usage and functioning
Understanding the concepts of Non-Parametric tests in SPSS
Learning data entry

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

HEALTH PSYCHOLOGY

Course Code: PSY4205 **Credit Units: 02**

Course Objective:

- To give a better understanding of the concept of health and it's various functions to understand its role in human behaviour.
- To acquaint the students with nature and significance of emerging areas of health psychology.
- To highlight the role of social, psychological and behavioural risk factors in health promotion and disease prevention.
- To introduce the students to types of stressors, their consequences, cognitive behavioural interventions for managing stress.
- To impart knowledge about causes and intervention for some prevalent stress related disorders / addictions.

Course Content:

Module I: Introduction to Health

Historical background; Aims and Objectives of Health Psychology, Challenges for the future
Significance of Health Behaviour, Theory of Planned Behaviour: Attributive Theory, Health Locus of Control

Module II: Social Support & Health

Factors for Personality & Health Link, Types of Social Support, Link between social support & Health, Cross Cultural Images of Health

Module III: Life Style Disorder

CAD, CHD, Hypertension, Stroke, Obesity, peptic ulcer, Migraine, Asthma, and Diabetes: Overview, Implications & Management.

Module IV: Health Enhancing Behaviour

Stress: Meaning, Dimensions and Coping Strategies.
Improving Health & Well Being, Enhancing Support
Maintenance of Health: Diet and Nutrition, Relaxation Techniques: Jacobson Progressive Relaxation, Broota's Relaxation Response

Module V: Health Behaviour Modification

Cognitive Behvavioural approach, Relapse Prevention, Attitude & Health-Belief Model
Models of Mental Health: Clinical, Community and Social Action Model

Examination Scheme:

SCIENTIFIC RESEARCH PAPER

Course Code: PSY4209 **Credit Units: 01**

Course Objective:
The scientific research papers for Masters Students is to enhance the reading and writing habits of the students and to make them aware about the process of carrying out a research work. This helps them to develop insight into the course they are studying which creates an academic interest among the students. Presentation of the term paper plays an important role as it facilitates knowledge sharing and improvement in presentation skills which will further enhance the confidence of the students. The overall objective of this term paper is to develop research orientations in students and to make them understand and enhance skills in Research Methodology.

Guidelines for Research Article or Scientific Papers:

Topic
Introduction
Review Research
Objective
Methodology
Discussion
Conclusion
References & Bibliography

No. of pages in the compilation of the paper 25-30 (minimum 25 pages)

RESEARCH METHODS: EXPERIMENTAL DESIGN

Course Code: PSY4301 **Credit Unit: 02**

Course Objective:
Research Methodology is a way to find out the result of a given problem on a specific matter or problem that is also referred as research problem. In Methodology, researcher uses different criteria for solving/searching the given research problem. Different sources use different type of methods for solving the problem. So this course will enable the student to understand and apply basic research methods in psychology including research design, data analysis and report findings research conclusion apparently based on the parameters of particular research methods.

Course Contents:

Module I: Introduction to Research
Meaning of Scientific Research
Objectives and Steps in Scientific Research
Defining research problem
Defining variables
Developing hypothesis

Module II: Evaluating Measures and Hypothesis
Need For Evaluating Measures
Reliability and Validity
Hypothesis testing: Type1 and Type 2
Going beyond hypothesis testing: Effect size and Power

Module III: Validity of Experimental Researches and Threats to them
Statistical Conclusion validity
Construct validity and External Validity
Establishing the cause and Effect
Single Group threat, Multiple Group threats, Social threats

Module IV: Experimental Designs-I
Two-Group experimental designs
- Within-subject Design
- Between-subject design
- General Linear Model

Module V: Experimental Designs-II
Factorial designs
Randomized Block designs
Hybrid Experimental Designs: Soloman four group designs
Mixed designs

PSYCHOTHERAPY

Course Code: PSY4302 **Credit Units: 03**

Course Objective:
The course enables students to learn various therapies and their applications in counselling field. The course aims to enable participants to acquire the development and therapies in counselling which can be used in a variety of settings, and also to understand the importance of the development of personal awareness in the effective application of counseling skills.

Course Contents:
Module I: Introduction
Psychotherapy: Meaning, Nature & Scope
Variables affecting Psychotherapy: Specific Variables: Client Variable, Therapist Variable, Process variables, Social & Environmental Variable
Non-Specific Variables: Spontaneous cure, Placebo Effect
Currents and Future Trends of Psychotherapy

Module II: Psychotherapy in India
Psychotherapy in the Indian context
Spirituality and psychotherapy
Yoga and Meditation

Module III: Varieties of Psychotherapy
Supportive therapy
Re-educative Therapy
Re-constructive therapy
Counselling vs. Psychotherapy

Module IV: Psychoanalytic Therapies
Freud's Psycho-analytic Therapy, Adlerian Psychotherapy, Brief Dynamic Therapies

Module V: Humanistic Therapies
Client-Centered Therapy, Existential Therapy and Gestalt Therapy

Module VI: Behavioral and Cognitive Behavior Therapy
Behavioral therapy, Cognitive Behavior therapy, Rational Emotive Behavior Therapy (Ellis)

Module VII: Few more Important Therapies
Family, Marital and Interpersonal Therapy
Therapies with Children and Adolescents
Group Therapy

Module VIII: Therapeutic Guidelines while working with
Women, Older clients, Clients with personality disorder
Grief and loss
Self-harm
Persons from disadvantaged context

CLINICAL PSYCHOLOGY

Course Code: PSY4303 **Credit Units: 03**

Course objective:
Clinical psychology is the branch of psychology concerned with the assessment and treatment of mental illness, abnormal behavior and psychiatric problems. This field integrates the science of psychology with the treatment of complex human problems, making it an exciting career choice for people who are looking for a challenging and rewarding field.

Course Contents:
Module I: Introduction
Meaning and Nature of Clinical Psychology
Background of Clinical Psychology: First Fifty years of Clinical Psychology (Establishment of Psychological Clinics and Influence of World War I)
Clinical Psychology: between World War I and II; From World War II to Present

Module II: **Foundation of Clinical Psychology**
Historical origin, the Psychometric tradition, the influence of health and child guidance movement, the influence of Sigmund Freud & the American Psychologist's in America.
The influence of World War II on development of Clinical Psychology
Roots of Clinical Psychology in India: the pre-independence phase, post independence to the present scenario.

Module III: Development of clinical Psychology as a profession.
Activities of Clinical Psychologist: psychological assessment, Psychotherapy, research, community mental health programme, teaching, consultation, administration.
Differences & similarities with other mental health professions
Subspecialties of clinical Psychology: Clinical health Psychology, Forensic Psychology, Geropsychology, Clinical Neuropsychology, and child clinical psychology.
Professional identity, responsibilities

Module IV: Diagnosis and assessment.
Nature and purpose of Clinical diagnosis & assessment
Stages in the Assessment Process
Clinical Assessment Techniques: observation, interview, case-study, Psychological tests.

Module V:
Employment Setting for Clinical Psychologist
Subspecialties of Clinical Psychology
Organizations in Clinical Psychology
Ethical and Legal Issues in Clinical Psychology
Cultural issues, current scenario & future prospects.

PRACTICUM- III

Course Code: PSY4308 **Credit Units: 03**

Course Objective:

1. To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology experiments.
3. To encourage and guide the students to undertake a small-scale research project.
4. To apply the general concepts of psychology through experimentation and testing

Note: Total 5 practicals will be conducted in the third semester among the list of following practicals

Course Content:

1	Measures of Psychosocial Development (MPD)	Development
2	Culture Free Self-Esteem Inventories, 3rd Edition	Self-Esteem
3	State-Trait Anger Expression Inventory-2™ (STAXI-2)	Anger
4	Personality Inventory for Youth	Personality
5	Family Relations Test: Children's Version	Interpersonal Relationship
6	Wide Range Intelligence Test (WRIT)	Intelligence

FIELD PRACTICE-III

Course Code: PSY4309 **Credit Units: 04**

Course Objective:
To develop, in students the skills of observation, collection and documentation of data for conducting theoretically correct and practically relevant research

Methodology

Each student will engage themselves in interaction and observation of psychological processes in a subject/ field of their choice.
Student will then present their findings in the form of a paper for seminar discussions.
Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme:

Field/Seminar Report	:	40 marks
Viva-Voce	:	30 marks
Internal Faculty and Interaction	:	10 marks
Presentation/Daily Diary Report	:	20 marks

Prof. (Dr.) Anil Kumar

SUMMER INTERNSHIP EVALUATION

Course Code: PSY4335 **Credit Units: 06**

GUIDELINES FOR INTERNSHIP FILE AND INTERNSHIP REPORT

(These guidelines will be useful for undertaking an internship programme during the summer or at any other time wherein the student/ researcher works full time with a company/organisation)

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship programme can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal class room situations. These attributes are intellectual ability, professional judgment and decision making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain and submit a file (**Internship File**) and a report (**Internship Report**).

INTERNSHIP FILE

The Internship File aims to encourage students to keep a personal record of their learning and achievements throughout the Programme. It can be used as the basis for lifelong learning and for job applications. ***Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.***

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and his/her own personal contribution to the organization.

The File is essentially a comprehensive documentation of how one proceeds while working on the assignment and should be regularly checked by the faculty guide/ supervisor, issues discussed with the students, doubts if any clarified and signed as having done so. This will form the basis of **continuous evaluation** of the project.

The File will include ***five sections*** in the order described below.

1. **The Title Page –** An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Table of Content –** An outline of the contents of the file by topics and subtopics with the page number and location of each section.
3. **Introduction** – Short, but should include how and why you obtained the internship experience position and the relationship it has to your academic/professional and career goals.
4. **Main Body** – Should include a brief summary/ executive summary of the **Internship Project Report** that the student has worked on, an **analysis of the company/organization** in which the student is working, a **personal review** of the student's management skills and how they have been

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

developed through the programme, the daily tasks performed, major projects contributed to, dates and hours spent on a task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

5. **Appendices** – Include pamphlets, forms, charts, brochures, technical and descriptive literature, graphs and other information related to your Internship experience.

INTERNSHIP REPORT

The **Internship Report** is the research report that the student has to prepare on the project assigned by the organization. (Incase a student is not assigned a specific research project in the organization, he has to select any one aspect of the organization and prepare a research report on it). The lay out of the report should be as per the standard layout prescribed by the organization wherein the student undertakes the Internship. In case, there is no layout prescribed by the organization the following components should be included in the report:

- **Title or Cover Page**.
  The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

- **Acknowledgements**
  Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

- **Abstract**
  A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

- **Table of Contents**
  Titles and subtitles are to correspond exactly with those in the text.

- **Introduction**
  Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

- **Materials and Methods**
  This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

- **Results and Discussion**
  Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

  Note that in writing the various secions, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporing or contradicting the present case of research.

- **Conclusion(s) & Recommendations**
  A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:
  - Did the research project meet its aims (check back to introduction for stated aims)?
  - What are the main findings of the research?
  - Are there any recommendations?
  - Do you have any conclusion on the research process itself?

- **Implications for Future Research**
  This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

- **Appendices**
  The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.
- **References**
  References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

The Layout Guidelines for the Internship File & Internship Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Assessment Scheme:

Continuous Evaluation: 30%
(based on Internship File and the observations of the faculty guide/ supervisor)

Feedback from Company/ Organization: 10%

Final Evaluation:
(Based on Internship Report, Viva/ Presentation) 60%

COUNSELLING PSYCHOLOGY

Course Code: PSY4304 **Credit Unit: 03**

Course Objective: To produce graduates with a well-developed professional identity as counseling psychologists, including awareness and appreciation of context, development, and strength-based interventions. Thus, we seek to develop the professional skills of our students such that each is able to:

- Demonstrate understanding of the impact of multiple contexts on human behavior
- Demonstrate understanding of theories and techniques of developmentally-based health promotion and intervention for individuals, systems, and communities
- Appreciate the role of individual and cultural differences and diversity in human development and behavior

Course Contents:

Module I: Introduction

Meaning, Definition & Goals
Historical Background: Origin of Counseling within Philosophy and Medicine,
Influence from Psychology, Mental health development, the guidance movement and other influences
Difference between Counseling and other associated helping professions (psychotherapy, psychiatry, social work, guidance etc.)

Module II: Counseling Process

Settings for counseling
Steps in counseling
Therapeutic relationship: The importance of relationship, components of relationship, Facilitative conditions for the counseling relationship

Module III: Counseling Approach: Insight oriented

Psychodynamic Approach: Psychoanalytic, Adlerian
Humanistic Approach: Existential, Client-centered, Gestalt

Module IV: Counselling Approach: Action oriented & other approaches

Behavioural Approach: Operant-Conditioning, Classical-Conditioning.
Cognitive Approach: Cognitive Tharepy, Rational emotive therapy.
Other Approaches: Narrative Therapy, Expressive Therapy, and Biofeedback.

Module V: Current Issues in Counseling:

Ethical Issues: Professional Codes, Our divided loyalties, Areas of ethnical difficulty, recent trends
Legal Issues: Advice for the passionately committed counseling student
Mental Health Counseling
Counseling diverse population: Gender bias, Counseling the aged, the ethnic minorities, and the physically challenged

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

NEURO-PSYCHOLOGY

Course Code: PSY4306 **Credit Units: 03**

Course Objective:
The objective of this course is to give a better knowledge of brain and its various functions to understand its role in human behavior.

Course Contents:
Module I: Introduction
Understanding the concept of Neuropsychology
The rationale for Neuropsychological evaluation
Common problems with brain damage

Module II: Plasticity of Brain
Neuropsychological aspect of plasticity of brain
Cerebral cortex and lateralization / localization of functions

Module III: Frontal Lobe and Temporal Lobe Deficits
Behavioural/ emotional/ personality/ cognitive changes associated with the lobe functions.

Module IV: Parietal and Occipital Lobes Deficits
Behavioural / emotional/ cognitive functions associated with each lobe.

Module V: Neuropsychological Rehabilitation (Holistic Approach)
Planning, process and outcome of cognitive retraining
Role of family and larger community
Financial/ employment Rehabilitation
Neuropsychological Assessment
- Bender Gestalt Test
- Benton's Visual Retention Test

Module VI: Social Support and Health
Factors for Personality and Health Link
Types of Social Support
Link between social support and Health
Cross cultural images of health

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE

RESEARCH METHODS: NON-EXPERIMENTAL DESIGN

Course Code: PSY4401 **Credit Unit: 02**

Course Objective:
Research Methodology is a way to find out the result of a given problem on a specific matter or problem that is also referred as research problem. In Methodology, researcher uses different criteria for solving/searching the given research problem. Different sources use different type of methods for solving the problem. So this course will enable the student to understand and apply basic research methods in psychology including research design, data analysis and report findings research conclusion apparently based on the parameters of particular research methods.

Course Contents:

Module I: Introduction

Nature and Purpose of Non-Experimental Research Designs and their importance
Advantages and Disadvantages of Non-experimental Research Designs
Differences between Experimental and Non-Experimental Research Designs
Types or Non-experimental Designs: Pure Descriptive design, Correlational Descriptive Design and Other type

Module II: Quasi- Experimental designs

Quasi- experimental research designs: their uses and importance
One-Group Designs
Non-equivalent control group designs
Pretest-Posttest Control Group Design

Module III: Non-Experimental Designs

Quantitative Non-Experimental Designs, Causal Comparative
Qualitative and Quantitative perspectives: Collecting qualitative data: Case study, interview, Observational method. Discourse Analysis, Grand narrative analysis, Ethnographic methodology.
Time series Designs

Module IV: Correlational Designs

Correlational research design: Its Basic nature and uses
Kinds of Correlational designs: Panel Design, Cross-Sectional Design and Longitudinal Designs
Concept and application of Multiple Regression Analysis (linear and stepwise)
Factor analysis and Its Implications

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

MENTAL RETARDATION

Course Code: PSY4402 **Credit Units: 02**

Course Objective:
The paper on Mental Retardation introduces nature of mental retardation, its classification, assessment and intervention programs.

Course Contents:
Module I:
Mental Retardation: Definition of mental retardation, Classification-Psychological Classification Medical and Educational Classification, Causes and Prevention

Module II:
Mental Retardation: Psycho-educational Assessment, Intelligence Tests, FACP, BASIC-MR, BASAL-MR

Module III:
Mental Retardation: Enhancing Skills- CTC, IEP, Prompting, Task Analysis, Channing, Shaping, Modeling, Reinforcement

Module IV:
Mental Retardation: Reducing maladaptive behaviours- Assessment of maladaptive behaviours, plan of behavior modification, techniques for decreasing problem behavior.

Module V:
Vocational Training and Empowering families having child with Mental Retardation, Special Sports, Acts and Policies

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE

PRACTICUM- IV

Course Code: PSY4412 **Credit Units: 03**

Course Objective:

1. To give practical experience to the students in administering and scoring psychological tests and interpreting the scores.
2. To acquaint the students with the basic procedure and design of psychology experiments.
3. To encourage and guide the students to undertake a small-scale research project.
4. To apply the general concepts of psychology through experimentation and testing

Note: Total 5 practicals will be conducted in the fourth semester among the list of following practicals

Course Content:

1	NEO-4™ - Comprehensive Kit	Personality
2	Comprehensive Test of Non-verbal Intelligence-Second Edition (CTONI-2)	Intelligence
3	Neuropsychological Assessment Battery® (NAB®) Attention Module Kit	Attention
4	Detroit Tests of Learning Aptitude - Fourth Edition (DTLA-4)	Learning
5	Reynolds Intellectual Assessment Scales (RIAS)	Intelligence
6	General Health Questionnaire (GHQ)	Health

DISSERTATION

Course Code: PSY4437 **Credit Units: 06**

GUIDELINES FOR DISSERTATION

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree

The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Selecting the Dissertation Topic
It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:
- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning the Dissertation
This will entail following:
- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline
It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan
- It provides a focus to your thoughts.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records
This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

Dissertation format
All students must follow the following rules in submitting their dissertation.
- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary.**
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

  Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

  For books, the following details are required:
  Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation:
- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5

Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the Assessment of the Dissertation
While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

Assessment Scheme:

Continuous Evaluation: (Based on Abstract, Regularity, Adherence to initial plan, Records etc.)	40%
Final Evaluation: Based on,	60%
Contents & Layout of the Report,	25
Conceptual Framework,	10
Objectives & Methodology and	10
Implications & Conclusions	15

REHABILITATION PSYCHOLOGY

Course Code: PSY4404 **Credit Unit: 03**

Course Objective:
Objective of this course is to learn profession of Rehabilitation Psychology, Psychological Assessment of persons with disabilities, Psychological Interventions and dealing with families

Course Contents:
Module I:
Overview of the profession of Rehabilitation Psychology and practice, history, growth and scope, Role of Psychologist in Rehabilitation

Module II:
Psychological Assessment- Assessment of Cognition, aptitudes, psychopathology, work/vocational and daily functioning

Module III:
Health behavior: Theories of health behavior change, interventions strategies for individuals and families of disabled
Behaviour Modification and Cognitive Therapies in Rehabilitation

Module IV:
Dealing with Families- Family's reactions to disabilities, coping styles, family counseling, Coordination with Multidisciplinary team

Module V:
Community Based Rehabilitation – Goals of CBR, components of CBR, Role of Professionals, role of Community, Ethical Issues

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

CHILDHOOD PATHOLOGY AND EXCEPTIONAL CHILDREN

Course Code: PSY4405 **Credit Unit: 03**

Course Objective:
Objective of this course is to learn various categories of exceptionality, early identification, special and mainstream education

Course Contents:
Module I:
Developmental Disorders- Autism Spectrum Disorders, attention deficit hyperactivity disorder, Mental Retardation, Learning Disabilities, Hearing Impairment, Disability of Locomotion

Module II:
Bipolar disorder in children, conduct disorder, emotional disorders, eating disorders, enuresis
Psychological Assessment of Childhood disorders

Module III:
Special Education: Special Schools and Rehabilitation centres
Mainstreaming: assistive devices, adaptation, barrier free environment
Mainstreaming: Attitudinal change- teachers, non disabled students, Parents and Community

Module IV:
National Institutes in the field of disability: NIMH, NIVH, NIOH, AYJNIHH, NIEPMD, SVNIRTAR, Alimbco.
NGOs, Parent Organizations, Advocacy organization

Module V:
Legislative framework: Mental Health Act, RCI Act, Persons with Disability Act, National Trust Act, UNCRPD

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

PSYCHOTHERAPEUTIC INTERVENTION IN CLINICAL SETTING

Course Code: PSY4406 **Credit Unit: 03**

Course Objective:
To equip students with the basic understanding of various types of therapies and their implications in different clinical settings

Course Contents

Module I: Introduction
Psychotherapy Overview of historical developments and current trends in psychotherapy, issues related to consent (assent in case of minors), planning and recording of counseling session; and setting goals; pre and post assessment, interviewing: objectives of interview, structured and unstructured interview, open and close ended questions, clarification, reflection, facilitation and confrontation, silences in interviews.

Module II: Behavior Therapy
Origin, Foundations; Principles and Methodologies, behavioral assessment, formulation and behavioral goals Systematic desensitization (in vivo and in vitro); Extinction: Flooding and Response Prevention, Implosion, Covert Sensitization, Negative Practice and stimulus satiation. Skill training: Assertiveness Training; Modeling; Behavioral Rehearsal. Operant procedures: Token economy, Contingency management. JPMR and Biofeedback

Module III: Cognitive Therapy
Cognitive behavior therapy: Cognitive model; automatic negative thoughts, schemas principles and assumptions, technique: Ellis's Rational Emotive Behavior Therapy (REBT) and Beck's cognitive therapy, dialectical behavior therapy

Module IV: Therapy in Special Condition
Chronic mental illness, Substance Abuse, Learning Disabilities and Mental retardation and such other conditions, where integrative/eclectic approach is the basis of clinical intervention

Module V: Biomedical Therapy
Electro-convulsive therapy, Drug therapy-Antipsychotic drugs, Anti depressant drugs and Anti anxiety drugs

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	8	10	7	5	70

DIFFERENTIAL DIAGNOSTIC TECHNIQUES

Course Code: PSY4407 **Credit Unit: 03**

Course Objective:
Enable students to selecting an appropriate test for a particular purpose, administration, scoring and interpreting psychological test profile in clinical settings

Course Contents

Module I: Introduction
Case history; mental status examination; rationale of psychological test; behavioral observation, response recording and syntheses of information from different sources; formats of report writing, context of clinical assessment, types of referrals, ethical practice of assessment, selecting psychological tests.

Module II: Assessment of Cognitive Functions
Bender gestalt test, PGI Memory scale; Bhatia's battery of performance tests of intelligence
Binet's test of intelligence, Wechsler adult intelligence scale

Module III: Test for Differential Diagnosis
Tests for diagnostic clarification: A) Rorschach psychodiagnostics, B) Tests for thought disorders – color form sorting test, object sorting test, proverbs test, C) Minnesota multiphasic personality inventory; Multiphasic questionnaire, clinical analysis questionnaire, IPDE, D) screening instruments such as GHQ, hospital anxiety/depression scale etc. to detect psychopathology.

Module IV: Tests for Adjustment and Personality Assessment
Questionnaires and Inventories – 16 personality factor questionnaire, NEO-5 personality inventory, temperament and character inventory, Eyesenk's personality inventory, Eysenck's personality questionnaire, self-concept and self esteem scales, Rottor's locus of control scale, Bell's adjustment inventory (students' and adults'), subjective well-being questionnaires, QOL
Projective tests – sentence completion test, picture frustration test, draw-a-person test; TAT – Murray's and Uma Chowdhary's

Module V: Therapy in Special Condition
Psychological assessment of children: A) Developmental psychopathology check list, CBCL, B) Administration, scoring and interpretation of tests of intelligence scale for children such as SFB, C- 42 RPM, Malin's WISC, Binet's tests, and developmental schedules (Gesell's, Illingworth's and other) Vineland social maturity scale.

COMMUNITY PSYCHOLOGY AND INTERVENTION

Course Code: PSY4408 **Credit Units: 03**

Course Objective:
This course provides an introduction to the community psychology. Rehabilitation and human service system and professionally prepares the students for becoming rehabilitation counselors. It lays emphasis on the stands, approaches and contemporary issues related to community and rehabilitation psychology.

Course Contents

Module I: Rehabilitation
Case history; mental status examination; rationale of psychological test; behavioral observation, response recording and syntheses of information from different sources; formats of report writing, context of clinical assessment, types of referrals, ethical practice of assessment, selecting psychological tests

Module II: Health Behavior
Theories of Health Behavior Change, Interventions Strategies For Individuals And Families of Disabled, Models Of Therapeutic Education For Successful Rehabilitation

Module III: Community issues
Evaluation of community needs, rehabilitation in community, social counseling, training in daily living skills, community awareness raising and increasing community involvement, facilitating access to loans, vocational training, information for local self-help groups, contacts with different authorities, school enrolment **.**

Module IV: Psychotherapy in the Indian Context
Historical perspective in psychological healing practices from the Vedic period and the systems of Ayurveda and Yoga, contemporary perspectives; socio-cultural issues in the Indian context in practice of psychotherapy; ongoing research related to process and outcome.

Module V: Mental Health Policies of Government (National Mental Health Program, Mental Health Act)

Master of Social Work (MSW)

BASICS OF SOCIAL WORK

Course Code: SCW4102 **Credit Units: 03**

Course Objective:

- To understand the concept of social work.
- To get acquainted with the approaches and ethics of social work.
- To understand the areas of social work.

Course Contents:

Module I: Concepts in Social Work and Social Work Practice

Objectives and Functions of Social Work; Methods of Social Work (Primary and Secondary methods of social work); Social Service; Social Services
Social Exclusion (marginalization, exploitation, oppression); Empowerment
Social Development, Social Change, Social Action, Social Activism
Human rights and Human Rights Perspective

Module II: Approaches

The Concept of Social Welfare; Welfare approach,
Remedial and Therapeutic Approach,
Social Development Approach
Conflict Oriented Approach

Module III: **The Profession of Social Work**

The Basic Values and Principles of Professional Social Work
Religious, Political and Utilitarian Values
Code of professional ethic
Professional status of Social work in India

Module IV: **Fields of Social Work**

Family & Child Welfare;
Women Centric Practice
Medical and Psychiatric Social Work
Criminology and Correctional Work

Module V: HRD and HRM

Social Welfare Administration
Urban and Rural Community Development;
Dalit and Tribal Community Organization
Livelihoods and Social Entrepreneurship

Examination Scheme

WORK WITH INDIVIDUALS AND FAMILIES: SOCIAL CASE WORK

Course Code: SCW4103 **Credit Units: 03**

Course Objective:

- To be introduced to the method of working with individuals
- To understand the various contexts and the dimensions of issues and problems that individuals face and critically analyze them
- To be exposed to the approaches of social work practice with individuals
- To acquire the skills and techniques of working with individuals
- To comprehend the diversity of practice settings

Course Contents:

Module I: Social Casework as a Method of Social Work

Concept and Definition of Casework; Adjustment and maladjustment; Historical development of Social Casework; Influence of psychoanalysis on casework.

Principles of Social Casework Practice: Individualization, Acceptance, Non-judgmental Attitude, Participation, Relationship, Purposeful expression of feelings, Controlled emotional involvement, Client Self Determination, and Confidentiality

Components of Casework: Person- client, significant others and collaterals; Problem- need, impaired social functioning; Place- agency, objectives, functions, policies and resources; Process- Study, assessment, intervention, evaluation, follow-up, termination.

Skills and Techniques of working with individuals and families: Supportive, resource enhancement and Counselling, Knowledge of resources (networking)

Essential qualities in the caseworker: empathy, non-possessive warmth, genuineness.

Self as a professional: Conflicts and dilemmas in working with individuals and families.

Module II: Approaches and Models to understand clients and their contexts

Psycho Social Diagnostic approach (Richmond), Supportive and Modificatory Approach (Hamilton), Classified Treatment method (Floence Hollies)

Psychoanalytical, Functional approach

Problem solving approach (Perlman), Crisis intervention (Rappaport), Competence based approach (Elleen Grabrill), Empowerment approach

Family intervention, Person-in-Environment Model

Transactional Analysis, Holistic approach, Eclectic approach.

Module III: Case work tools

Listening, Communication Skills, Rapport Building.

Interview, Observation, Home visit, collateral contacts, referrals

Records: Nature, purpose and principles of recording. Types of Recording: narrative, process, problem oriented record keeping. Case history taking Use of case work records as tool of intervention. Subjective –objective assessment plan (SOAP). Modeling, role-playing and confrontation

Case presentation as tool of professional development. Developing self awareness, JoHari window, dealing with stress and burnout

Module IV: Casework Process

Phase 1 – Exploration of person in environment

Phase 2 - Multidimensional assessment and planning, multidimensional intervention

Phase 3 – Helping: implementing intervention and goal attainment

Phase 4 – Termination and evaluation, follow up

Case worker - client Relationship; characteristics of professional relationship: transference, counter transference and resistance; sustaining the relationship; obstacles in client - worker relationship.

Module V:Application of Method

Types of problems faced by Individuals and families; individual differences and needs; Primary and secondary settings

WORK WITH GROUPS: SOCIAL GROUP WORK

Course Code: SCW4104 **Credit Units: 03**

Course Objective:

- To understand of group work as a method of professional social work
- To learn theoretical approaches that inform group work practice.
- To gain insight into dimensions of group processes and group work practice
- To develop competencies for working with groups in diverse settings.

Course Contents:

Module I: Social groups and Group Work

Definition, Characteristics, and Importance Classification of Groups
Cooley, Sumner, MacIver & Page, Tosel and Rivas Theories of Group formation
Social Group Work – Concept, Historical development of Group Work, Values and Skills
Principles and Purpose of Group work

Module II: Theoretical approaches of group work practice

Psychoanalytic, Learning, Field, Social Exchange, Systems theories.
Stages of Group Development – Tuckman, Klien, Garland, Jones & Kolodny.
Models of social group work – Social goals, Remedial, Reciprocal models.
Programme development process, Programme Media.

Module III: Basic Group Processes

Sub-group, Group conflict, Group decision making,
Leadership in groups.
Group dynamics – Concept, and Areas – Communication and Interaction Patterns, Group Cohesion, Social Control Dynamics and Group Culture.

Module IV: Stages or Phases of Group work

Pre group formation, Beginning phase, Middle/Working phase and Termination phase, Follow up, Facilitation Skills and Techniques used in these Phases.

Module V: Group Work Practice in diverse settings

Disaster victims, Substance abusers, Alcohol Anonymous and elderly care – Role of group worker – Group psychotherapy, Group work Recording, Monitoring and Evaluation.

RESEARCH METHODS IN SOCIAL WORK: QUANTITATIVE APPROACH

Course Code: SCW4105 **Credit Units: 03**

Course Objective:

- To develop an understanding about the scientific approach to human inquiry.
- To develop an appreciation of the value and approach in social work research in addressing problems in the field of professional practice.
- To develop attitudes and skills appropriate for social work research.
- To acquire the skills for data analyses and research writing

Course Contents:

Module I: Introduction

Meaning, purpose and Dimensions of Research, Paradigms of research: Quantitative and Qualitative Approaches; Types of variables; Levels of measurement

The main preoccupations of quantitative researchers: Measurement, Causality, Generalization, Replication.

Distinction between social research and social work research

Introduction to sampling, sampling error, types of probability sample, sample size, types of non-probability sampling

Module II: Analytic Techniques

Univariate analysis: Frequency tables, measures of central tendency, measures of dispersion

Bivariate analysis: Pearson's r, Spearman's rho

Inferential Analyses: measures of association, tests of significance (chi square, t-test,) analysis of variance (ANOVA)

Multivariate analysis: Regression; Factorial Ananlysis; Path Analysis

Module III: Social Work Research

Use of research in social work; Intervention research and practice based research, Difference between social science research and social work research.

Types of social work research: need assessment studies, situational analysis, monitoring and evaluation, impact assessment, policy research

Steps in Social Work Research: identification of problem; need assessment; selection of research design; baseline study; intervention; assessment of intervention effects/impact; data editing and classification, data processing and analysis, report writing.

Module IV: Research Designs in Social Work Research

Scientific Social Surveys and field studies

Experimental study design, logic of experimentation, causation and control, randomization and matching internal validity

Types of experimental design (pre-experiment, true experiment, quasi experiment, external validity)

Other research approaches supportive to social work research: Action research; Participatory research

Module V: Scaling Techniques and Psychometric worth of data

Objective tests and scales; Difference between test, scale, questionnaire and inventory,

Scaling Techniques: Likert, Thurstone, Guttman.

Reliability: The concepts of variance in and stability and consistency of measures; the maxmincon principle; Internal reliability; Inter-observer consistency. Types of reliability

Validity: Concept; Relationship between reliability and validity; Types of validity

FIELD WORK PRACTICUM-I

Course Code: SCW4107 **Credit Units: 04**

Course Objective:
The emphasis is on-learning skills which revolve around specific tasks where cause-effect relationships are understood, where the persons have problems but they are more victims of their life circumstances rattier than of pathology for which great knowledge of psychological and social dynamics would be required and lower order of skills of intervention is required to be utilized. The processes dealt with at the individual, group or community is specific. Show dynamics but do not require unusual skills of intervention. Administrative tasks are also specific, e.g. planning and programming around a specific service.

The specific objectives of field-work in the first semester may include:
Development of the knowledge of:
(a) Socio-economic background and the living condition of tire vulnerable groups and the problems confronting them.
(b) Problem-solving techniques utilized in the specific area of work of the organization where student is placed.
(e) The use of simple research procedures and maintenance of scientific data to assess problems/needs/agency.

Development of skills in:
(a) Work with individuals, families, groups and communities and seeing the need for an integrated approach to problem solving.
(b) Selecting and utilization of community resources.
(c) Work as a member of a team with other professional anti own discipline to, plan, organise and implement projects, programmes with emphasis cm the use of the process in problem-assessment and problem solving.

Development of professional attitudes, conducive to work with individual families group and communities, leading gradually to an awareness of self as a professional person. Efforts will be made to work out objectives in each semester for every student in field practicum according to the nature and services of the agency and his performance will be evaluated accordingly.

Methodology
Each student will engage themselves in interaction and observation of social phenomenon and processes in a subject/ field of their choice. Student will then present their findings in the form of a paper for seminar discussions. Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme:

Field/Seminar Report :	40 marks
Viva-Voce :	30 marks
Internal Faculty and Interaction :	10 marks
Presentation/Daily Diary Report :	20 marks

SOCIAL POLICY AND SOCIAL WELFARE ADMINISTRATION

Course Code: SCW4201 **Credit Units: 03**

Course Objective:

- To gain knowledge of policy analysis and the policy formulation process.
- To acquire skills in critical analysis of social policies and development plans.
- To develop an understanding of social policy in the perspective of national goals as stated in the Constitution, particularly with reference to Fundamental Rights and the Directive Principles of State Policy.
- To critically understand the concept, content and process of social development.
- To develop the capacity to identify linkages among social needs, problems, development issues and policies.
- To locate strategies and skills necessary for social development and reinforce values of social justice, gender justice and equality.

Course Contents:

Module I: Social Policy and Constitution

Concept of social policy, sectoral policies and social services. Relationship between social policy and social development. Values underlying social policy and planning based on the Constitutional provisions (i.e. the Directive Principles of State Policy and Fundamental Rights) and the Human Rights. Different models of social policy and their applicability to the Indian situation.

Module II: Sectoral Social Policies in India

Evolution of social policy in India in a historical perspective.
Implementation of different sectoral policies related to education, health, social welfare, women, children, welfare of backward classes, social security, housing, youth, population and family welfare, environment and ecology, urban, rural and tribal development, and poverty alleviation.

Module III: Social Planning

Concept and scope of social planning;
Goals of social development. The popular restricted view of planning for social services;
The wider view as inclusive of all sectoral planning to achieve social goals.
Indian planning in a historical perspective; The Constitutional position of planning in India.
The legal status of the Planning Commission; Coordination between Centre and State;
Need for decentralization; Panchayath Raj; People participation.

Module IV: Social Development

Concept of social development; Current debates about development;
Approaches to development; Social Development Index and Social Progress Index; Social capital; Social development, community and reciprocity; Sustainable and equal society; Importance and challenges of a developing society;
Social development strategy of empowering people by transforming institutions

Module V: Procedures in registering an organization and its administrative processes

Societies Registration Act, 1860, Indian Trust Act, 1882, The Companies Act, 1956. Administrative Structure – Memorandum of Association, Bye laws, Constitution, Deed, Functions and responsibilities of governing board, committees and office bearers. Administrative structure of social welfare at the Central, State and Local level – Programmes of Central Social Welfare Board and State Social Welfare Boards.

Administrative Processes: Planning, Organizing, Staffing, Directing, Coordinating, Reporting and Budgeting (POSDCORB) – Mobilization of financial resources - Grants in Aid – Foreign Contribution Regulation Act, 1976 – Exemption from Income tax – Administrative skills – Writing reports, letters and

SOCIAL WORK WITH COMMUNITIES

Course Code: SCW4202 **Credit Units: 03**

Course Objective:

- To gain knowledge about the primary method of social work practice with communities.
- To understand the techniques and approaches of social work practice with communities.
- To acquire the skill of working with communities.

Course Contents:

Module I: Community organization

History, Concept, Principles, Assumptions and Objectives
Community Organization and Community Development
Process of community organization: Study and Survey, Analysis, Assessment, Discussion, Organization, Action, Reflection, Modification and Continuation.

Module II: Models of community organization

Locality development, social planning, social action
Skills in community organization: Communication, Training, Consultation, Publicrelations, resource mobilization, liaisoning.
Approaches to community organization; General content, Specific content and Process objective.

Module III: Methods of community organization

Awareness creation, Planning and Organizing, Education, Networking, Participation,
Leadership; Community organization with vulnerable communities; Migrants, Refugees,
Slum dwellers and transgender.

Module IV: Social Action in Community Organization

Concept, Purpose, Strategies and Tactics in Social Action
Social Action as a method of social work
Approaches to social action; Paulo Friere, Saul Alinsky, Mahatma Gandhi and Ambedkar.

Module V: Concept of advocacy as a tool

Strategy for advocacy: Campaigning, Lobbying, Use of media and public opinion building in advocacy
Coalition and Network building, linking up protest movement with development work.

Examination Scheme

Components	CT	CT/H/P/V/Q	CT	A	EE
Weightage (%)	7	10	8	5	70

CT: Class Test, H: Home Assignment, P/V/Q: Presentation/Viva/Quiz, A: Attendance,
EE: End Semester Examination

COMMUNITY ORGANIZATION AND SOCIAL ACTION

Course Code: SCW4204 **Credit Units: 03**

Course Objective:
To understand theory and practice of social work in community

Course Contents:
Module I: Community Work and Social Action
Definition of Community, Types of Communities. Difference between Rural and Urban Communities, Power Structure in the Community, Community Leaderships
Types of Community Leaders, Role of Community leaders in Community Development.

Module II: Strategies of Community Work and Social Action
Approaches to Community Work: Neighborhood Development, Systems and Radical, Politics and Community Work, Role of Community Organiser and Social Activist, Contemporary Social Action Interventions in India

Module III: Community Organization
Definition, Objectives, Community Organization as a Method of Social Work
Various approaches to Community Organization; General content approach, Specific content approach, Process content approach.
Community organization and Development

Module IV: Methods of Community Organization
Fact Finding, Planning, Group Decision Making, Conference and Committee Practice, Co-operative action negotiation, consultation, Methods of Conflict Resolutions, Resource Mobilization, Administration, Recording Evaluation, Skill required for Community Organization.

Module V: Application of Community Organization Methods
Application in Slums, Rural areas, during Flood, Famine and War.Community Organization for prompting Public Health and Family Welfare.

RESEARCH METHODS IN SOCIAL WORK: QUALITATIVE APPROACH

Course Code: SCW4205 **Credit Units: 03**

Course Objective:

- To understand various styles of interpretation of qualitative data.
- To analyze the relative appropriateness of different analysis approaches for a particular qualitative study.
- To apply one or more analytic approaches to data they have been collected and write a report.
- To understand ethical issues for qualitative research.
- To manage qualitative data files effectively to ensure ease of use and participant confidentiality.
- To use the basic and intermediate functions of a computer software program for coding of textual data.

Course Contents:

Module I: Introduction

Differences between Qualitative and Quantitative research
Nature and traditions of qualitative research: Naturalism, Ethnomethodology, Emotionalism, Post-Modernism,
Deductive and Inductive approaches to data collection
Paradigmatic issues in Qualitative research

Module II: Qualitative Validity

Reliability and Validity: Types and procedures
Criteria for evaluating the worth of qualitative research: Credibility, Transferability, Dependability, Conformability. Triangulation
Collaborative Enquiry

Module III: Theoretical Background for Qualitative Research

Phenomenology: Realistic and Constitutive Phenomenology, Existential analysis,
Constructivism: Social constructivism and Psychological Constructivism
Metaphysics: Existentialism
Grounded theory: Goals and Perspectives, Methods: Axial coding and selective coding

Module IV: Methods of Data Collection

Interview: Purposes; Stages; Types: Structured, Semi-structured and Unstructured; Advantages and disadvantages associated with each; Interviewing Skills;
Focus group: Uses, recording and Transcription, size of groups, Limitations
Discourse analysis; Narrative analysis; Rhetorical analysis; Conversational analysis
Ethnography and participant Observation: Forms; Logistics; Advantages and disadvantages; Confidentiality; Taking and expanding field notes; Documenting; Being an effective participant observer
Documents as sources of data: Personal, Public, Organizational, Mass-Media, visual and virtual
Qualitative content analysis; mixed methods analysis

Module V: Use of Computers and Software

Qualitative Data Analysis (QDA) Softwares: Computer Assisted Qualitative Data Analysis Software (CAQDAS); MAXQDA
Defining Variables; Developing coding systems; Tabulating Data
Quantification in qualitative research: Thematic, Qausi-Quantification in qualitative research
Data Analysis and knowledge management

SKILL BASED PROJECT

Course Code: SCW4206 **Credit Units: 01**

Course Objective:
The aim of the skill based project is to help learners acquire specific skills to deal with situations encountered during practice and acquire skills for intervention. It provides learner with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

These may be for problems/ concerns, issues or situations like work with alcoholics, HIV/AIDS affected persons, adolescents for life skills development, youth for leadership development and couples for marital relationship and enrichment work with elderly. The skill based project is primarily to enhance skills/ develop new skills for practice in specific situation, specific problems and issues.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks
Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks
Chapter 3: Presentation, Analysis & Findings -- 25 marks
Chapter 4: Conclusion & Recommendations -- 10 marks
Chapter 5: Bibliography -- 05 marks

Project Report Power Point Presentation & Viva

75 marks 25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1- Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2- Acknowledgement: Various organizations and individuals who might have provided assistance /cooperation during the process of carrying out the study.

3-Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4- Body of the Report: The body of the report should have these four logical divisions
a) ***Introduction:*** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.
b) ***Conceptual Framework / National and International Scenario*****:** (relating to the topic of the Project).
c***) Presentation of Data, Analysis and Findings*****:** (using the tools and techniques mentioned in the methodology).
d) ***Conclusion and Recommendations:*** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5- Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6- Annexures: Questionaires (if any) relevant reports etc.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I: Selection of the topic for the project by taking following points into consideration:
Suitability of the topic.
Relevance of the topic.
Time available at the disposal.
Feasibility of data collection within the given time limit.
Challenges involved in the data collection (time & cost involved in the data collection, possibility ofgetting responses, etc.)

Step II: Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III: Collection of information and data relating to the topic and analysis of the same.

Step IV: Writing the report dividing it into suitable chapters, viz.,
Chapter 1: Introduction,
Chapter 2: Conceptual Framework / National & International Scenario.
Chapter 3: Analysis & Findings
Chapter 4: Conclusion and Recommendations.

Step V: The following documents are to be attached with the Final Project Report.
1) Approval letter from the supervisor (Annexure-IA)
2) Student's declaration (Annexure-IB)
3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

FIELD WORK PRACTICUM-II

Course Code: SCW4207 **Credit Units: 04**

Course Objective:

The emphasis is on-learning skills which revolve around specific tasks where cause-effect relationships are understood, where the persons have problems but they are more victims of their life circumstances rattier than of pathology for which great knowledge of psychological and social dynamics would be required and lower order of skills of intervention is required to be utilized. The processes dealt with at the individual, group or community is specific. Show dynamics but do not require unusual skills of intervention. Administrative tasks are also specific, e.g. planning and programming around a specific service.

The specific objectives of field-work in the second semester may include:

1. Development of the knowledge of:
   (a) Socio-economic background and the living condition of tire vulnerable groups and the problems confronting them.
   (b) Problem-solving techniques utilized in the specific area of work of the organization where student is placed.
   (e) The use of simple research procedures and maintenance of scientific data to assess problems/needs/agency.

2. Development of skills in :
   (a) Work with individuals, families, groups and communities and seeing the need for an integrated approach to problem solving.
   (b) Selecting and utilization of community resources.
   (c) Work as a member of a team with other professional anti own discipline to, plan, organise and implement projects, programmes with emphasis cm the use of the process in problem-assessment and problem solving.

3. Development of professional attitudes, conducive to work with individual families group and communities, leading gradually to an awareness of self as a professional person.
   Efforts will be made to work out objectives in each semester for every student in field practicum according to the nature and services of the agency and his performance will be evaluated accordingly.

Methodology

Each student will engage themselves in interaction and observation of social phenomenon and processes in a subject/ field of their choice. Student will then present their findings in the form of a paper for seminar discussions. Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme:

Field/Seminar Report :	40 marks
Viva-Voce :	30 marks
Internal Faculty and Interaction :	10 marks
Presentation/Daily Diary Report :	20 marks

SOCIAL JUSTICE AND EMPOWERMENT

Course Code: SCW4302 **Credit Units: 03**

Course Objective:

- To understand the concept of social justice and acquire information on the legal rights of people.
- To develop an understanding of the legal system and get acquainted with the process of the legal system with emphasis on functioning in India.
- To understand the role of the police, prosecution, judiciary and correction.
- To gain insight into the problems faced by the people belonging to different strata of society, in interacting with this system.
- To develop an understanding of the processes and problems of public interest litigation and legal aid to marginalized.

Course Contents:

Module I: Social Justice

Meaning and Concept; Social legislation: Definitions and concept. Social justice as an essential basis of social legislations; Social legislations in a welfare state with special reference to India.

Rights: Concept and definitions; Types of Rights; Rights of women and children; Rights of Scheduled Castes and Scheduled Tribes; Rights of accused and offender under Constitution of India, Indian Penal Code and Criminal Procedure Code.

Module II: Division of Law

Substantive Law and Procedural Law. Legislations pertaining to Social Institutions: Marriage, divorce, maintenance of spouse, adoption.

Legislations for prevention of Crime and Deviance: Indian Penal Code (relevant chapters on Offences against Public Tranquility, Public Health, Safety, Convenience, Decency and Morals, Offences relating to Religion, Offences affecting the Human Body, Offences relating to Marriage and Cruelty).

Legislations pertaining to women

Module III: Criminal Justice System in India

Objectives of Criminal Justice System.

Police: Structure, powers and functions and their role in maintaining of peace and order in the society.

Prosecution: Meaning, structure and role in criminal justice; Trial participation.

Administration of criminal justice system; Understaffed police and judiciary, and lack of political will as ailments of criminal justice system in India

Module IV: Judicial System in India

Constitution of Supreme Court and High Court: Powers and functions.

District and Subordinate Courts: District Sessions Court, Magistrate Courts, Family Courts, Tribunals, Fast Track Courts, Lok Adalats.

Salient features of judicial system in India.

Judicialactivism.

Module-V: Correction and Correctional Laws

Corrective measures as per Criminal Procedure Code, Probation of Offenders Act, Juvenile Justice (Care and Protection of Children) Act. Legal Aid: Concept of legal-aid, history of legal-aid, persons needing legal-aid, legal-aid schemes.

Public Interest Litigation: Meaning, Concept, Process and Problems.

Right to Information Act- Provisions and implementation.

Role of Social Worker: Social Work intervention, need, methods.

COMMUNICATION AND COUNSELLING

Course Code: SCW4303 **Credit Units: 03**

Course Objective:

- To understand the meaning and importance of communication in day-to-day life.
- To identify salient features of effective interpersonal communication and interviewing.
- To develop holistic understanding of Counselling as a tool for help.
- To acquire knowledge of various approaches: their theoretical under-pinnings for goals, values, processes and techniques.
- To develop and practice skills of communication and interviewing and applying it in real life situations.

Course Content:

Module I: Communication: Meaning and importance

Basics of Communication: Process, components, types Verbal and nonverbal communication; Interpersonal and Interpersonal communication; Education and communication for national development.

Interviewing: Objectives, principles of interviewing, interviewing skills: listening, reflection, questioning, confronting.

Formal verbal communication in seminars, conferences, lectures, group discussion, panel discussion, symposium, workshop, role playing, simulation exercises

Written communication: reports, letters, e mails, article/essay, project report.

Module II: Visual aids in communication

Posters, notice boards, flip charts, charts, flash cards, photographs, pamphlets, slide shows.

Mass Communication: Television, exhibition, newspapers and magazines, advertisements, radio, film, VCD/ DVD, social media and internet.

Impact of mass communication on society, family, marriage and child development.

Communication Analysis and Planning: Planning and executing a communication campaign on an issue using various methods of communication.

Module III: Counselling

Nature, goals and areas of counselling; ethics in counselling; cultural sensitivity in counselling; intentional Counselling and interviewing.

Counselling Situations: Developmental, preventive, educative, facilitative.

Process and stages of Counselling; Qualities of an effective counselor: Empathy, genuineness and non-possessive warmth

Counselling Skills: Building rapport, mind skills, feeling skills, relationship skills.

Module IV: Approaches to Counselling

Rogers Person-centeredApproach

Beck's Cognitive Therapy; Ellis' Ratioal Emotive Behaviour Therapy

Behaviour Counselling and Therapy: common principles, methods based on classical conditioning, methods based on instrumental conditioning

Gestalt Therapy: assumptions, games and exercises; Existential approaches

Eclectic model; Indigenous Approach: Mindfulness, meditation, yoga, philosophy of *Nishkam Karma* and Non-Doer.

Module V: Group and Relational Approaches

Couple and Family Counselling: Issues related to dysfunctional communication, roles and boundaries in the family; Intervention strategies

Group Counselling: Process, advantages and disadvantages

Counselling in family Counselling centers, family courts, counselling bureau, vocational Counselling centers, mental health centers, child guidance clinics, correctional institutions, de-addiction and rehabilitation center, educational institutions.

FIELD WORK PRACTICUM-III

Course Code: SCW4304 **Credit Units: 04**

Course Objective:

The emphasis is on-learning skills which revolve around specific tasks where cause-effect relationships are understood, where the persons have problems but they are more victims of their life circumstances rattier than of pathology for which great knowledge of psychological and social dynamics would be required and lower order of skills of intervention is required to be utilized. The processes dealt with at the individual, group or community is specific. Show dynamics but do not require unusual skills of intervention. Administrative tasks are also specific, e.g. planning and programming around a specific service.

The specific objectives of field-work in the third semester may include:

1. Development of the knowledge of:
   (a) Socio-economic background and the living condition of tire vulnerable groups and the problems confronting them.
   (b) Problem-solving techniques utilized in the specific area of work of the organization where student is placed.
   (e) The use of simple research procedures and maintenance of scientific data to assess problems/needs/agency.

2. Development of skills in :
   (a) Work with individuals, families, groups and communities and seeing the need for an integrated approach to problem solving.
   (b) Selecting and utilization of community resources.
   (c) Work as a member of a team with other professional anti own discipline to, plan, organise and implement projects, programmes with emphasis cm the use of the process in problem-assessment and problem solving.

3. Development of professional attitudes, conducive to work with individual families group and communities, leading gradually to an awareness of self as a professional person.

Efforts will be made to work out objectives in each semester for every student in field practicum according to the nature and services of the agency and his performance will be evaluated accordingly.

Methodology

Each student will engage themselves in interaction and observation of social phenomenon and processes in a subject/ field of their choice. Student will then present their findings in the form of a paper for seminar discussions. Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme:

Field/Seminar Report :	40 marks
Viva-Voce :	30 marks
Internal Faculty and Interaction :	10 marks
Presentation/Daily Diary Report :	20 marks

SUMMER INTERNSHIP EVALUATION

Course Code: SCW4335 **Credit Units: 06**

GUIDELINES FOR INTERNSHIP FILE AND INTERNSHIP REPORT

(These guidelines will be useful for undertaking an internship programme during the summer or at any other time wherein the student/ researcher works full time with a company/organization)

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship programme can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal class room situations. These attributes are intellectual ability, professional judgment and decision making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.
In order to achieve these objectives, each student will maintain and submit a file (**Internship File**) and a report (**Internship Report**).

INTERNSHIP FILE
The Internship File aims to encourage students to keep a personal record of their learning and achievements throughout the Programme. It can be used as the basis for lifelong learning and for job applications. ***Item scan be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.***

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and his/her own personal contribution to the organization.

The File is essentially a comprehensive documentation of how one proceeds while working on the assignment and should be regularly checked by the faculty guide/ supervisor, issues discussed with the students, doubts if any clarified and signed as having done so. This will form the basis of **continuous evaluation** of the project.

The File will include ***five sections*** in the order described below.

1. **The Title Page –** An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Table of Content –** An outline of the contents of the file by topics and subtopics with the page number and location of each section.
3. **Introduction** – Short, but should include how and why you obtained the internship experience position and the relationship it has to your academic/professional and career goals.
4. **Main Body** – Should include a brief summary/ executive summary of the **Internship Project Report** that the student has worked on, an **analysis of the company/organization** in which the student is working, a **personal review** of the student's management skills and how they have been developed through the programme, the daily tasks performed, major projects contributed to, dates and hours spent on a task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.
5.**Appendices -** Include pamphlets, forms, charts, brochures, technical and descriptive literature, graphs and other information related to your Internship experience.

INTERNSHIP REPORT
The **Internship Report** is the research report that the student has to prepare on the project assigned by the organization. (Incase a student is not assigned a specific research project in the organization, he has to selectany one aspect of the organization and prepare a research report on it).The

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

lay out of the report should be as per the standard layout prescribed by the organization wherein the student undertakes the Internship. In case, there is no layout prescribed by the organization the following components should be included in the report:

- **Title or Cover Page**.
  The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.
- **Acknowledgements**.
  Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.
- **Abstract**
  A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.
- **Table of Contents**
  Titles and subtitles are to correspond exactly with those in the text.
- **Introduction**
  Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.
- **Materials and Methods**
  This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.
- **Results and Discussion**
  Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

  Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

  While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

  Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporing or contradicting the present case of research.

- **Conclusion(s) & Recommendations**
  A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:
  - Did the research project meet its aims (check back to introduction for stated aims)?
  - What are the main findings of the research?
  - Are there any recommendations?
  - Do you have any conclusion on the research process itself?

- **Implications for Future Research**
  This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- **Appendices**
  The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

- **References**
  References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

The Layout Guidelines for the Internship File & Internship Report:

- A4 size Paper Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Assessment Scheme:

Continuous Evaluation:
(based on Internship File and the observations of the faculty guide/ supervisor) 30%

Feedback from Company/ Organization: 10%

Final Evaluation:
(Based on Internship Report, Viva/ Presentation) 60%

HUMAN RESOURCE DEVELOPMENT AND EMPLOYEE WELLNESS

Course Code: SCW4305 **Credit Units: 03**

Course Objective:

- To develop multi facets of the personality and to build self confidence. To develop a spirit of continuous learning and innovation.
- To strengthen the competency base of individuals, teams and organization and also familar with the organizational culture.
- To understand and further the organization culture.
- To appreciate the importance of bottom-line focus to the Human Resource function and trend toward HR Accountability.
- To understand the various approaches to and techniques of measuring HR issues.
- To create awareness of different types of information systems in an organization so as to enable the use of computer resources efficiently, for effective decision- making.

Course Content:

Module I: Human Resource Development (HRD)

Concept, origin and needs for HRD; Overview of HRD as a Total system; Approaches to HRD; human capital approach; social psychology approach and poverty alleviation approach
HRD and its dimension
Competency Mapping.

Module II: HRD Interventions

Performance Measurement Systems: Fundamental issues. Feedback sessions.
Organizational goal setting process, Key Result Area (KRA) and Key Performance Indicator (KPI),Coaching, Mentoring, career planning, career development, reward system, quality of work life.
HRIS: Computers and computer based Information Systems. Measuring HR: Changing role of HR, HR as a strategic partner, the need for measuring HR.
Approaches to measuring HR: Competitive Benchmarking, HR Accounting, HR Auditing, HR Effectiveness Index, HR Key Indicators, HR MBO (Management by Objectives).

Module III: Instructional Technology

Learning and HRD; Building Learning Organization; Learning as intellectual capital, Measuring learning
Architecting a learning organization, Organizational Learning, models and curriculum
Factors and principles of learning; group and individual learning; HRD trends; Behavioural Sciences; Transactional Analysis Concepts of continuous learning, Behaviour modeling and self-directed learning
Evaluating the HRD effort: Data gathering; analysis and feedback; HRD experience in Indian organizations; future of HRD - Organization culture and development.

Module IV: Talent Development

Concept and importance; Training Need Analysis, process of training, designing and evaluating training and development programs. Use of information technology, Types and Methods of Training: Training within industry (TWI), External training: on and off the job; Training methods; lecture, incident process, role play, structured and unstructured discussion, in-basket exercise, simulation, vestibule, training, management games, case study, programmed instruction, team development, and sensitivity training;
Review of training programs.

Module V: Employee Wellness

Concept, philosophy, principles and scope; Importance and relevance of wellness programs, Role of Welfare Officer as per the Factories Act 1948. Relevance - with reference to Accidents, Absenteeism, Alcoholism, Domestic Violence: Preventive and remedial measures. Employee Counselling. Role of Counselor in Organizations. Corporate Social Responsibility (CSR): CSR as a business strategy.
Environmental management systems ISO 14001, ISO 26000:

MENTAL HEALTH AND PSYCHIATRIC SOCIAL WORK

Course Code: SCW4306 **Credit Units: 03**

Course Objective:

- Understand the concepts of mental health and mental illness.
- Understand the signs and symptoms, etiology, diagnosis and treatment of mental health problems.
- Understand different services for the care of mentally ill.
- Understand historical background of psychiatric social work in India and abroad.
- Understand the nature of psychiatric social work services and relevance of team work.
- Understand the nature of collaboration with voluntary organizations for the welfare of mentally ill.
- Identify the issues related to psychiatric social work department in hospitals and community mental health settings.

Course Contents:

Module I: Mental Health

Concept of health and illness; WHO's definition of Health; Mental health and mental illness; Deficit and competence based models of mental health; Classification of Mental Disorders: International Classification of Mental Disorders (ICD) and Diagnostic ans Statistical Manual of Mental Disorders (DSM) – 5.

Symptoms, etiology, diagnosis, prognosis and management of –Neuroses, Psychoses, Psycho physiologic disorders, Personality disorders, Psychiatric disturbances in children and adolescents, Organic psychotic conditions, Mental retardation.

Module II: Introduction to Psychiatric Social Work

Meaning and Scope: Historical background of psychiatric social work in India and abroad; Reasons for its development as a specialty.

Application of social work methods and other related techniques used in the field

Multi-disciplinary approach and team work in mental health care Problems of hospitalization; Impact of mental illness on the patient, family and community.

Module III: Practice of Social Work

Importance of home visit and visit to the place of work

Role of family in the treatment of mentally ill

Preparing the family and community for the return of the affected individual

Follow-up

Module IV: Care of mentally ill:

Day-care centre, night-care centre, half-way-home, sheltered workshop, Occupational therapy units;

Role of voluntary organizations, governmental-agencies and paraprofessionals in the welfare of mentally ill.

Role of social worker in mental health centers, departments of psychiatry, general hospitals, child guidance clinics, community mental health units, correctional institutions, industries, and family welfare centers.

Role of social worker in the management of substance abuse. Educational avenues in psychiatric social work; Research avenue in the field of mental health for social workers.

Module V: Organization of psychiatric social work

Psychiatric Departments: Functions and collaboration with other departments.

Community mental health and social work, NMHP, Innovations like Satellite clinics, district mental health programme etc.

Rehabilitation and Acts: Occupational therapy - Principles and practice - Psychosocial rehabilitation.

Mental Health Act, 1987.

The Persons with Disabilities (Equal Opportunities, Protection of Rights and Full Participation) Act, 1995.

SOCIAL WORK WITH FAMILIES AND CHILDREN

Course Code: SCW4307 **Credit Units: 03**

Course Objective:

- To strengthen the professional competence of Social work Practice with families and children.
- To gain understanding of type of practice settings working with families and children.
- To understand the role of the profession and the stakeholders in the welfare of families and children.

Course Content:

Module I: Social Work with Families and Children

Working effectively with children and families, Values and Ethics in social work with children and families, Family as a Client System, Strengthening Family structure and Communication.

Module II: Process of Intervention

Social Worker-client relationship, Social Study, Assessment, Goal Setting, Contracting, Intervention; Development of practice skills: Conceptual skills, Interviewing skills – Informational interview, Diagnostic/Assessment interview, Therapeutic Interview, Recording skills, Evaluation.

Module III: Social Work Practice in different settings

Social Work interventions for children in different settings: school settings, correctional settings, institutionalized children, community based interventions, children in care and protection, adoption centres, street children, children abusing substances, children in clinical settings, Social work interventions for families in different settings: Family Counselling centres, short stay, Respite care, Destitute homes, Clinical settings.

Module IV: Role of the Social Worker

Role of the Social Worker while working with children and families**:** Case worker, Group Facilitator, Community Organizer, Case Manager, Enabler, Reformer, Project Manager, Researcher, Activist, Advocacy and Lobbying, Sensitisation, Campaigning, Social Audits, Trainer, Monitoring and Evaluation, Documentation, Fund Raising, Resource Mobilisation, Policy Planning, Catalyst, Change maker, Role Model, Community Organiser, Coordinator, Enabler, Reformer, Facilitator, Volunteer

Module V: Stakeholder's Participation

State, Global Community, NGO's, Institutions of National Importance, Judiciary, Bureaucrats, Policy Makers, Social Activist, Educational Institutions, PRI's, Self Help Groups, Community Leaders, Religious Institutions, Gram Panchayats, Police, Health Workers, Grassroot Level workers, Anganwadi Workers, ASHA's, Donors, Volunteers, Youth, Civil Society Organisation, Community Based Organisations.

CORRECTIONAL ADMINISTRATION AND SERVICES

Course Code: SCW4308 **Credit Units: 03**

Course Objective:

- To acquaint with the correctional institution and non-institutional programmes.
- To understand the different services for juvenile, young and adults offenders and also to understand the legal provisions and procedures for their assistance.
- To understand the role of custodial staff in the process of correction and rehabilitation.
- To understand the structure, function, treatment and facilities provided by the institutions.

Course Content:

Module I: Institutional systems
Introduction to correctional administration. History of Correctional Administration in India: Concept, objectives and functions of Correctional administration.
Institutional protection for children and young offenders: Juvenile Justice (Care and Protection of Children) Act -2002, 2005.
Observation Home, Juvenile Homes for Boys and Girls and their functions. District Shelter for boys and girls and their functions.

Module II: Institutional Treatment for Released Offenders and Convicts
Prison: Historical development of prison system; Indian Prison Act, Prison Manual (Haryana).
Prison administration, prison Labour, prison discipline and prison education; Pre-release programs; Prisoners' Welfare Board.
Open-air prison: Historical development of open-air prison system, organization and administration.

Module III: Non-institutional systems
Probation: Historical development of probation system, principles and procedure.
Parole: Historical development of parole; functions and powers of Parole Board; Conditions under the Prison Manual. Indian Penal Code, provisions on Parole.
Pre-release preparation of the parolee

Module IV: After care services
Legal provision for establishing social institution.
Provision for assistance to released prisoners: Role of voluntary organization, corporate bodies and the state in the rehabilitation.
Prevention of Immoral Traffic Act: Its objectives; State Home for Women (Sthrinikethana)
Citizen committees, Police help-line.

Module V: Social work intervention
Scope of social work intervention in prisons.
Role of social worker in the prison administration.
Social work practice in correctional services: Nature, scope and challenges
Comprehensive assessments: of offenders, their families, and communities to identify offenders' needs, strengths, ability to cope and any support networks they may require.
A career in social work at correctional services

MANAGEMENT OF DEVELOPMENT AND WELFARE SERVICES

Course Code: SCW4310 **Credit Units: 03**

Course Objective:

- To understand the overall environment and its impact on the nature, structure and development of organizations in corporate, public and voluntary sectors in the context of social work profession.
- To understand policies and procedures involved in establishing and maintaining human service organizations.
- To acquire skills to network and participate in the management of resources human, material and environmental.
- To develop skills to participate in management of programmes, as a part of the inter-disciplinary team and initiate as well as develop new programmes.
- To develop ability to analyze the practices applied in specific settings.

Course Contents:

Module I: Social Services

Need for welfare and developmental organisations, Factors determining social welfare programmes, Development and Welfare organizations' response to societal needs; role of state, voluntary and corporate sector. Management services: Types of settings, organizational characteristics like origin, nature, size, structure, and design, organizational climate and impact of sociopolitical environment.
Management process: Vision, Planning, Organizing, Directing, Staffing, Coordination, Reporting, Budgeting. Establishment: Registration, different types of legislations, legal status, constitution, rules and procedure, goals - Financial resources: Organizational Budget, Sources of finance, Fund Raising, Records, Audit.

Module II: Physical Structure and Infrastructure

All activities related to acquiring, hiring and maintaining importable structure and infrastructure, maintenance of premises and daily upkeep. Enhancing the involvement and the potential of people in organization's executive boards, committees; professionals and other staff-relationship, communication, team work, and facilitating team building, supervision, and participation in training.

Module III: Programme Development

Programme management: long term, short term, and Documentation. Project proposals based on felt-needs, nature of resources, eligibility criteria, records, evaluation and research.
Impact analysis - Qualitative and quantitative

Module IV: Public Relations

Public relations need and its promotion by all in the organisation. Representing the organization, networking, public, corporate and voluntary sector, resource building, accountability, transparency, use of media for publicity.

Module V: Change and its Management

Understand and manage change, innovation in a rapidly changing social environment: for policy programmes and structure. Organizational understanding: Conflict, conflict resolution, creating positive climate.

HUMAN RIGHTS AND SOCIAL WORK PRACTICE

Course Code: SCW4401 **Credit Units: 03**

Course Content:

Module I: Human Rights

Definition and Classification

Civil and Political Rights, Socio Economic and Cultural Rights. Universal Declaration of Human Rights

Similarities and Differences between Human Rights and Fundamental Rights

Module II: Human Rights Acts and Institutions

Indian Constitution and Relevant Articles relating to HR. The protection of Human Rights Act 1993. Structure and Function of National Human Rights Institutions National HR Commissions National SC/ST Commissions National commission for Women National commission for Minorities State Human Rights Institutions State HR commissions State commission for women State commission for Minorities.

Module III: Human Rights in the Context of Specific Population

SC/ST, Religious Minorities

Physical, Visual and Mentally Handicapped.

HIV/AIDS victims

Refugees, War victims

Prisoners, Custodial Violence,

Women and Children, Senior Citizens

Work situations

Module IV: Social Policy

Definition, need, evolution and constitutional base; Sources and instrument of social policy.

Social Planning and Social Development: Meaning of social planning, community planning and community participation. Planning machineries at the State and National levels

Five year plans and Social development; Concept and indicators; social change and social development in India.

Module V: Social Legislations

Salient Features of Child Labour Act, Right To Information Act, Suppression of Immoral Traffic Act and Prevention of Immoral Trafficking. Domestic Violence Act**.**

SOCIAL WORK WITH URBAN, RURAL AND TRIBAL COMMUNITIES

Course Code: SCW4403 **Credit Units: 03**

Course Objective:

- To develop an understanding of Urban, tribal and rural communities.
- To understand the characteristics and problems of urban, tribal and rural communities.
- To acquire knowledge about the contribution of Governmental and Nongovernmental Organisations to urban, tribal and rural development.
- To develop an understanding of the functions of Panchayath Raj Institutions .Gain knowledge about the application of social work in tribal and rural development programmes.

Course Contents:

Module I: Tribe in Relation to Caste and Nation

Nature and Characteristics of Primitive Cultures: Tribes in India and their ecological distribution.
Important tribal groups in India
Emerging Trends in Tribal Social Institutions: Family and Kinship Systems, Jati Structure, Economic Structure, Political organizations.
Characteristics of Tribal Society: Economic, Social, Political and Cultural Problems of Tribal Life.

Module II: Government Programs for Tribal Societies

Post Independence Programs and their Impact on Tribal Societies Programmes of Voluntary Agencies and their Impact on Tribal Societies.
Analysis and Assessment of Tribal Communities; Special Problems of the Tribals in a different areas.
Social Work Practice in Tribal Development: Community organization as a method of intervention, Participatory Rural Appraisal (PRA), Logical Framework Approach/Analysis (LFA), Scope of other techniques of intervention in tribal community development.

Module III: Rural Society and Poverty

Historical perspective: Dynamics in the village society; Caste/class relationships; Control and Power, Conflict and Integration. Poverty in the rural context; Nature and manifestations.
Analysis of Basic Problems: Issues faced by the rural poor such as Indebtedness, Bonded labour, Low wages, Unemployment, Underemployment, and other forms of exploitations.
Current Rural Development Programs in India: Council for the Advancement of People's Action and Rural Technology (CAPART) and other Rural Development Statutory Bodies. Panchayat Raj System in Indian states and its role in rural and tribal development.
Role of social worker in tribal and rural development programs.

Module IV: Perspectives on Urban Community Development

Urban Economy: Urban economy in the context of land, labor, capital, technology, and organizations.
Concept and Meaning of Development: Basic Elements and Dimensions with an Urban Focus.
Economic Development in the Urban Context: Industrialization and Employment generation Different service sectors.
Infrastructure facilities: Road, Energy and Finance
Development of cities: production, distribution and the present shift; Economics of local Government – Revenue and tax collection and distribution for Development.

Module V: Urban Development and Civic Administration

Growth of High-rise as well as slums; Slum–city relationship and its problems
Role of civic administration
Voluntary Organizations (NGOs) and urban dwellers
Role of law and town planning in urban development.

FIELD WORK PRACTICUM-IV

Course Code: SCW4404 **Credit Units: 03**

Course Objective:

The emphasis is on-learning skills which revolve around specific tasks where cause-effect relationships are understood, where the persons have problems but they are more victims of their life circumstances rattier than of pathology for which great knowledge of psychological and social dynamics would be required and lower order of skills of intervention is required to be utilized. The processes dealt with at the individual, group or community is specific. Show dynamics but do not require unusual skills of intervention. Administrative tasks are also specific, e.g. planning and programming around a specific service.

The specific objectives of field-work in the Fourth semester may include:

1. Development of the knowledge of:
   (a) Socio-economic background and the living condition of tire vulnerable groups and the problems confronting them.
   (b) Problem-solving techniques utilized in the specific area of work of the organization where student is placed.
   (e) The use of simple research procedures and maintenance of scientific data to assess problems/needs/agency.

2. Development of skills in :
   (a) Work with individuals, families, groups and communities and seeing the need for an integrated approach to problem solving.
   (b) Selecting and utilization of community resources.
   (c) Work as a member of a team with other professional anti own discipline to, plan, organise and implement projects, programmes with emphasis cm the use of the process in problem-assessment and problem solving.

3. Development of professional attitudes, conducive to work with individual families group and communities, leading gradually to an awareness of self as a professional person.

Efforts will be made to work out objectives in each semester for every student in field practicum according to the nature and services of the agency and his performance will be evaluated accordingly.

Methodology

Each student will engage themselves in interaction and observation of social phenomenon and processes in a subject/ field of their choice. Student will then present their findings in the form of a paper for seminar discussions. Similarly, field work will be done by students in their area of interest and present their practical observations, as a report with analysis and suggestions.

Examination Scheme:

Field/Seminar Report :	40 marks
Viva-Voce :	30 marks
Internal Faculty and Interaction :	10 marks
Presentation/Daily Diary Report :	20 marks

DISSERTATION

Course Code: SCW4437 **Credit Units: 06**

GUIDELINES FOR DISSERTATION

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Selecting the Dissertation Topic

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of;
- information and to your own knowledge; of value and interest to you and your personal and professional development.

Planning the Dissertation

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records
This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

Dissertation format All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary.**
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

  Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.
  For books, the following details are required: Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996
- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the Assessment of the Dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:
Has the student made a clear statement of the objective or objective(s).
If there is more than one objective, do these constitute parts of a whole?
Has the student developed an appropriate analytical framework for addressing the problem at hand.
Is this based on up-to-date developments in the topic area?
Has the student collected information/data suitable to the frameworks?
Are the techniques employed by the student to analyse the data / information appropriate and relevant?
Has the student succeeded in drawing conclusion form the analysis?
Do the conclusions relate well to the objectives of the project?
Has the student been regular in his work?
Layout of the written report

SOCIAL WORK WITH PWD

Course Code: SCW4407 **Credit Units: 03**

Course Objective:

• Gain knowledge about the concept of and different types of disabilities.
• Acquire an understanding of the theoretical models and approaches to disability
• Develop an attitude of respect and dignity towards persons with disability
• Become skilled at undertaking social work interventions with other stakeholders in the field of disability

Course Contents:

Module I: Concept of Disability and Impairment

ICIDH and WHO definitions of disability; causes, types Magnitude of various disabilities and their impact on persons with disability and their families
Discourses and models of disability
Developing an anti-oppressive and Inclusive understanding of disability

Module II: Types, Causes and Rehabilitative Concerns

Types of disability: physical, sensory, intellectual, multiple disabilities, learning developmental disabilities, psychosocial disability
Causes, types and care for persons with disabilities (medical and other interventions including aids and appliances)

Process of rehabilitation: early identification, education, vocational rehabilitation, social inclusion and empowerment within the family and community.
Understanding the experience of disability: Limitations, strengths and potentials of persons with disabilities

Module III: Impact of disability on individuals and their families

Reactions of parents/family members and individuals ways of coping with disability.
Needs and problems of persons with disability and their families across the life span and at critical stages in their lives
Social work intervention at each stage

Module IV: Disability Intervention at Individual and Family Levels

Individual level strategies: Self help and support groups; assertiveness training, life skills enrichment
Family level strategies: Family crisis intervention, family centered intervention, parent guidance, parent training
Role of social worker in different settings: Hospital and treatment centers, home, educational institutions, vocational rehabilitation centers, the community
Multidisciplinary rehabilitation teams and their roles.

Module V: Disability intervention at community and policy levels

Building awareness, community education, community based rehabilitation, advocacy and lobbying
Using international instruments (Salamanca Declaration, Standard Rules, UNCRPD) and legislations governing disability (Persons with Disability Act, 1995, RPD Bill, MHC Bill, RCI Act, National Trust Act, 1999) for advocacy
State's role in implementation of legislations.

SOCIAL WORK WITH HIV/AIDS

Course Code: SCW4408 **Credit Units: 03**

Course Objective:

- To understand the issues related with HIV/AIDS positive cases.
- To develop an attitude of respect and dignity towards persons with HIV/AIDS.
- To become skilled at undertaking social work interventions with and HIV/AIDS cases.

Course Contents:

Module I: HIV and AIDS: The Current Landscape from a Death Sentence to a Chronic Disease
The History of the Epidemic; Nature of the retro virus; HIV as a Behaviourally acquired infection; Modes of transmission; Prevention of transmission of infection; Safer Behaviours
HIV Testing and Treatment; the issues of Confidentiality; Counselling Centers; High risk populations; Bridge populations
Enduring Themes of Stigma and Discrimination

Module II: National Response for HIV/AIDS Management
A Health Crisis; Risk Factors for HIV; Vulnerable Groups: Youth and children, women, prisoners
National Response to the HIV/AIDS Crisis: National AIDS Control Policy (NACP) I-IV and the Formation of NACO and SACS
Challenges of Positive Living; Approaching the Epidemic Holistically
Future for HIV/AIDS Social Work: Developing a New Agenda

Module III: HIV/AIDS Prevention for MSM and IDU
Risk factors for Men Who Have Sex with Men, Diverse ideologies and psychosocial settings of MSM
IDU practices and health risks; Nationwide distribution of IDUs
Intervention for HIV-Prevention among MSM and IDU: Condom distribution and syringe exchange programs
Intricacies of Counselling MSM and IDU

Module IV: HIV/AIDS Prevention and Care for At-Risk Adolescents and Young Adults
The Disproportionate Impact of HIV on Young People; Reasons for High Risk among Youth for HIV Infection
HIV/AIDS Education for Adolescents and Young Adults; Sex and reproductive education; Impacts of Drugs and Alcohol on HIV transmission; Adolescent Sexual Minorities, Sexual Behaviour Experimentation among Adolescents; Assessment with Adolescents and Young Adults; The HEADSS Assessment Model; Suicide Risk/Depression Screening of Adolescents
Community Level Interventions Targeted at Adolescents for HIV Prevention

Module V: HIV Case Management: The Social Work Perspective
The Hub of Service Provision
Understanding Social Work Case Management
Description of Supportive HIV Case Management Services
Common Risks in People Living with HIV or AIDS
The Top Five Skills of an HIV Case Manager
The Top Five Attitudes of an HIV Case Manager
Partnership with people affected by HIV/AIDS

DISASTER MANAGEMENT

Course Code: SCW4410 **Credit Units: 03**

Course Objective:

- Understand key concepts, theories and approaches of disaster management with specific reference to Indian context**.**
- Develop skills to analyse factors contributing to disaster**.** Develop an understanding of the process of disaster management**.** Develop an understanding of the social worker's role in the team for disaster management.

Course Contents:

Module I: Disasters

Concept, types and impact - Famine, floods, cyclones, hurricanes, warfare, earthquake, volcanoes; traditional and modern disaster threats and care factor, classification of disasters; Disaster management - Definition and concept; approaches to disaster management, importance and relevance of disaster management in the present environmental scenario, cases studies of disaster management.

Module II: Disaster and Social Work Intervention

Scope of disaster related intervention, intervention during disaster impact stage, trauma Counselling and crisis intervention, post disaster management, damage assessment and long term rehabilitation and reconstruction, networking and co-ordination between government, NGOs, donor agencies, local bodies, police, military etc.

Module III: Disaster Prevention and Preparedness

Vulnerability analysis, hazard mapping, community based disaster preparedness programmes, training for CBDP, preparedness for post-disaster emergency response and long term rehabilitation, organization and planning, logistics; resource utilization, specialized skills and training needs; public awareness and education; first-aid training, civil defense training.

Module IV: Institutions and Instruments in Disaster Response

International decade for natural disaster reduction and UN resolutions, administration of relief in India - National, state, district and local levels.

Module V:Disaster related legislations and policies

National and international donor agencies; NGOs, mental health institutions in disaster management and relief.

PSYCHOLOGY

Syllabus - Semester First

INTRODUCTORY PSYCHOLOGY

Course Code: PSY2151 **Credit Units: 3**

Course Objective:
This course is designed to introduce the science of psychology. It identifies and defines the theories, terms, methods, and various fields of psychology. This course can be used as a foundation towards continued education in more specific areas of psychology. General Psychology encourages students to study in depth the notions of modern scientific psychology. Upon completion of this course, student should have the following objectives:

- To know the major personalities important to the field of general psychology and the ideas, theories, and schools with which they are associated.
- To know the major terms associated with general psychology and their meanings.
- To know the major concepts associated with the area of general psychology.

Course Content

Module I:
Meaning, Definition, Nature and Goals of Psychology

Module II:
Scope of Psychology; Branches and Fields of Psychology

Module III:
Background of Psychology: Historical Perspective

Module IV:
Schools of Psychology: Structuralism, Functionalism, Behaviorism, Gestaltism, Psychoanalysis, Humanism, Existentialism, Cognitive

Module V:
Methods of Psychology: Introspection, Observation, Experimental, Interview, Questionnaire, Survey

Examination Scheme:

Syllabus - Semester Second

ABNORMAL PSYCHOLOGY

Course Code: PSY2251 **Credit Units: 3**

Course Objective:

Abnormal psychology is a branch of psychology that deals with psychopathology and abnormal behavior that causes suffering to the individual and others around him or her, and interferes with functioning in a significant way. The term covers a broad range of disorders, from depression to obsession-compulsion to sexual deviation and many more. The study of abnormal psychology also includes learning about the factors, situations, and conditions that cause mental disorders and how they may be best treated. Following are the objectives for the part of Psychology:

- To gain an appreciation of the fundamental issues that underlies the concept of mental abnormality.
- To become familiar with how, in terms of symptoms, the various psychological disorders present themselves.
- To appreciate different explanations of abnormality. That is, to understand the role of environment, genetic factors, psychodynamics, neuropsychology, and biochemistry in the determination of psychopathology.

Course Content:

Module I: Introduction

Concept of abnormality: Criteria and Perspectives
Classification: DSM IV-R, conceptual and operational evaluation.
Casual factors in Psychopathological Behaviour
(a) Biological determinants
(b) Psychological determinants
(c) Socio-cultural determinants

Module II: Neurosis and Psychosis

Concept and Difference between both the two

Module III: Neurotic Disorder

Generalized anxiety disorders
Obsessive-Compulsive disorders
Phobic Disorders
Eating Disorder

Module IV: Mood Disorders

Depression
Bipolar Disorder

Module V: Psychotic Disorder

Bipolar disorders: Manic, Depressive, Mixed
Psychotic depression
Delusional Disorder
Schizophrenia

BASIC COGNITIVE PSYCHOLOGY

Course Code: PSY2351 **Credit Units: 3**

Course Objective:
Cognitive Psychology is an objective, empirical discipline that tends to favor an experimental approach. This paper of Psychology is crucial to understand the basis of mental activity and human behaviour. The students of Psychology will need to have this knowledge about the normal mental operation of adults in order to understand more complex processes and their disorder. The subject emphasizes cognitive aspects to show the more up to date developments. In this paper of Psychology, Students will:

- Gain factual knowledge of the terminology, methods, and research findings in the field of cognitive psychology.
- Learn the fundamental theories and principles of cognitive psychology including being able to critique them.
- Learn how professionals in the field of cognitive psychology go about the process of gaining new knowledge.

Course Content
Module I:
Introduction, History and Background of Cognitive Psychology

Module II:
Thinking: Nature, and Types of Thinking:
Tools of thinking- Images, Concept, Symbols and Signs, Language, Muscle Activities and Brain Function

Module III:
Reasoning: Meaning and Types of Reasoning: Deductive and Inductive Reasoning

Module IV:
Problem solving: Meaning and Method of Problem solving
Decision Making: Meaning, types and hindrances

Module V:
Intelligence: Meaning, Nature and Theories of intelligence: Unitary Theory, Multifactor Theory, Two Factor Theory, Group Factor Theory.
Genetic and Environmental Influence on Intelligence
Classification of Intelligence Test
Concept of Mental Age and IQ

Examination Scheme:

Components	CT	CT/H/P/V/Q	CT	A	EE

LIFE SPAN DEVELOPMENT

Course Code: PSY2451 **Credit Units: 3**

Course Objective:
Developmental psychology, also known as human development, is the scientific study of systematic psychological changes, emotional changes, and perceptual changes that occur in human beings over the course of their life span. Originally concerned with infants and children, the field has expanded to include adolescence, adult development, aging, and the entire life span. Developmental psychology includes issues such as the extent to which development occurs through the gradual accumulation of knowledge versus stage-like development, or the extent to which children are born with innate mental structures versus learning through experience. The objective of this paper is:

1. To provide an understanding of Physical, cognitive, affective, moral, social and neural development during infancy, childhood, and adolescence.
2. To critically evaluate the role of heredity, maturation, and the environment in development.
3. To critically examine the relationship between scientific theories of development and the reality of development in everyday life.

Course Contents:

Module1: Introduction
Meaning and Concept of Development: Life Span Perspective,
Theoretical Perspective on Development,
Factors influencing development

Module 2: The Start to Life
Conception and Prenatal Development: The Interaction of Heredity and Environment;
Birth and newborn: Birth Complications, Competent Newborn.

Module 3: Development in Infancy and Toddlerhood (birth to 2years)
Physical Development
Cognitive Development: Roots of Language
Social and Personality Development

Module 4: Development in Childhood
The Preschool years (3-6 Years)
Physical Development;
Cognitive Development: Language Development
Social and Personality Development
The Middle Childhood (6-12 Years)
Physical Development
Cognitive Development: Intellectual and Language development
Social and Personality Development

Module 5: Development in Adolescence and Young Adulthood
Adolescence (12-19 years)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar

Physical Development
Cognitive development in Adolescence and School Performance
Social and Personality Development
Young Adulthood (19-35 years)
Physical Development: Physical Limitations and Challenges
Cognitive Development: Intelligence and Higher Education
Social and Personality Development: Forging Relationship and Choosing Career

Module 6: Development in Middle and Late Adulthood
Middle Adulthood (35-55 years)
Physical Development: Sexuality and Health
Cognitive Development: Memory and Remembering
Social and Personality Development: Cultural Dimensions
Late Adulthood (55 years to death)
Physical Development: Health and Wellness
Cognitive Development: Memory and Forgetting
Social and Personality Development: Successful Aging
Death, Dying and Bereavement

Syllabus - Semester Fifth

PSYCHOMETRIC TESTING

Course Code: PSY2551 **Credit Units: 3**

Course Objective:

Psychological assessment is a process of testing that uses a combination of techniques to help arrive at some hypotheses about a person and their behavior, personality and capabilities. Psychological assessment is also referred to as psychological testing, or performing a psychological battery on a person. A psychological assessment is the attempt of a skilled professional, usually a psychologist, to use the techniques and tools of psychology to learn either general or specific facts about another person, either to inform others of how they function now, or to predict their behavior and functioning in the future. Psychologists are the only profession that is expertly t rained to perform and interpret psychological tests. Below are the objectives of studying this particular paper of Psychology:

- To train the students in various psychological assessment techniques.
- To impart skills necessary for selecting and applying different tests for different purposes such as evaluation, training and rehabilitation.

Course Content:

Module-I: Introduction
History of Psychological Testing
Meaning, Definition and Types of Psychological Testing
Ethical issues in Psychological Testing

Module-II: Measurement
Nature and significance of Measurement
Distinction between assessment and measurement
Levels of measurement
Techniques of Attitude Measurement

Module-III: Construction of Test
Steps of constructing a Psychological Test
Reliability: Meaning, types and factors affecting reliability
Validity: Meaning, types and factors affecting Validity
Characteristics of a good Psychological Test

Module-IV: Assessment of General and Special Abilities
Intelligence (DAP: IQ and Slosson Intelligence Test (SIT-3/R)
Creativity: Creativity Assessment Packet (CAP)
Achievement: Diagnostic Achievement Test for Adolescents (DATA-2)

Module-V: Application of Testing
Assessment in Educational and Occupational Set-up: Achievement Test
Assessment in Clinical Set-up and in Counselling

COUNSELLING PSYCHOLOGY

Course Code: PSY2651 **Credit Units: 3**

Course Objective:
The paper of Counselling Psychology covers its history, theories, activities, specialties and trends. It concentrates on the importance of the personhood of counselors and of the multicultural, ethical and legal environments in which counsellors operate. This paper focuses on the context and process of counselling to provide a range of high quality and responsive counseling skills and its applications to help oneself and others.

Course Contents:
Module I: Introduction
Meaning, Definitions and Goals of counselling
Role of Counsellor in different Setting
Characteristics of a good counsellor

Module II: Counselling Process
Building Counselling Relationship
Working in a Counselling Relationship
Termination of Counselling Relationship

Module III: Counselling Approaches
Insight-Oriented Counselling: Client-Centred
Action-Oriented Counselling: Behavioural
Testing, Assessment and Diagnosis in Counselling

Module IV: Counselling Applications
Child Counselling and Counselling in School
Adolescent Counselling and Counselling in College
Career Counselling: Theories of Career Development
Group Counselling and Family Counselling
Addiction Counselling

Module V: Theories and Techniques of Counselling
Psychodynamic Approaches
Humanistic Approach
Cognitive Approach
Behavioural Approaches

Module VI: Current Issues in Counselling
Ethical and Legal Issues
Mental Health Counselling
Counselling in a Multicultural Society
Counselling with Diverse Population

POSITIVE PSYCHOLOGY

Syllabus - Semester First

THE SCIENCE OF HAPPINESS

Course Code: PSY2152 **Credit Units: 03**

Positive Psychology is the scientific study of human flourishing, and an applied approach to optimal functioning. It has also been defined as the study of the strengths and virtues that enable individuals, communities and organizations to thrive. The underlying premise of positive psychology is that you can learn to be happier just as you can learn a foreign language or to be proficient at golf. This rapidly growing field is shedding light on what makes us happy, the pursuit of happiness, and how we can lead more fulfilling, satisfying lives. The course focuses on the psychological aspects of a fulfilling and flourishing life. Topics include happiness, self-esteem, empathy, love, achievement, creativity, music, spirituality.

Course Objectives:

- To bring an experience marked by predominance of positive emotions and informing them about emerging paradigm of Positive Psychology
- Build relevant competencies for experiencing and sharing happiness as lived experience and its implications

Course Contents:

Module-I: Introduction to Positive Psychology
Positive Psychology: Concept, History, Nature, Dimension and scope of Positive Psychology
Seligman's PERMA

Module-II: Positive Emotional States and Processes
Positive Emotions and well being: Hope & Optimism, Love
The Positive Psychology of Emotional Intelligence
Influence of Positive Emotions

Module-III: Strengths and Virtues
Character Strengths and Virtues
Resilience in the phase of challenge & Loss
Empathy and Altruism

Module-IV: Happiness
Introduction to Psychology of happiness, well being and scope, Types of happiness- Eudaimonic and Hedonic
History of Happiness, Theories, Measures and Positive correlates of happiness
Traits associated with Happiness
Setting Goals for Life and Happiness

OPTIMISM AND SUCCESS

Course Code: PSY2252 **Credit Units: 03**

Course Objectives:

This course synthesizes and integrate wellness principles and strategies into life, education and work place settings, thereby contributing to enhanced productivity, the prevention of chronic lifestyle disease, enjoyment of life, and personal fulfillment

Moreover, students will become holistic thinkers and lifelong learners who are able to integrate information across multiple disciplines and apply knowledge, skills, critical thinking and problem solving to real world situations.

Course Contents:

Module-I: Optimism and Physical Health

Optimism and coping with physical illness
Optimism and quality of life
Complementary Strengths of Health Psychology and Positive Psychology

Module-II: Optimism and Psychological Health

Hope Theory
Self Esteem and Self efficacy
Well-being therapy
From Positive Potential to Positive Excellence: Steps to be optimistic

Module-III: Gratitude: Parent of all virtues

Optimism, Gratitude and Happiness
Characteristics of grateful people
Cultivating Gratitude-Becoming more grateful

Module-IV: Problem Solving Appraisal and Psychological Adjustment

Motivation and Resilience
Stress and Stress Management

Module-V: Positive Psychology in Practice

Promoting Human Flourishing in Work, Health, Education, and Everyday Life
Positive Psychology and Life Coaching
Integrating positive psychology in practice

Module-VI: Success

What is success?
SMART Goal Setting & Letters to Yourself, Self-Motivation
Human Psychological Capital
Skills Sought by Employees

RESILIENCE AND WELL BEING

Course Code: PSY2352 **Credit Units: 03**

Course Objectives:
Wellbeing and resilience are vital to developing efficient problem solving skills, building and maintaining interpersonal relationships and realistic goal setting, all of which greatly enhance an individual's ability to perform and contribute meaningfully in daily life. The objective of this course is to develop an awareness of how mindfulness can allow one to navigate life's transitions, learn about Signs of resilience and wellbeing, and learn how to focus on wellbeing and resilience

Course Contents:

Module-I: Resilience
Meaning, Nature and Approaches
Theories of Resilience
Promoting Resilience

Module-II: Resilience in the phase of challenge & Loss,
Positive Response to loss, Resilience & Grit
Character Strengths and Virtues

Module-III: Post Traumatic Growth & Benefit Finding
Post Traumatic Growth, Models of PTG as Outcome, Models of PTG as a Coping Strategy
Benefit Finding, Meaning Making and Stress Inoculation
Types of Growth Outcome

Module-IV: Mindfulness and Well Being
Neuroscience of Well-being, Social / Emotional Wellbeing
Mindfulness-Based Interventions, Mindfulness and mental health
Mindfulness and Positive Thinking

Module-V: Subjective Wellbeing
Promoting Wellness: Integrating community and Positive Psychology
Building Resilience and Wellbeing

POSITIVE PSYCHOLOGY AND WORK LIFE

Course Code: PSY2452 **Credit Units: 03**

Positive organizational psychology takes a strengths-based approach to work relationships, leadership and individual purpose in the workplace. In applying positive psychology to work settings, the goal is to improve organizational performance as well as individual performance, well-being, and fulfillment. This course is designed to explore Positive Psychology in the work place. It will focus on the application of positive subjective experiences and traits in organizations to improve workplace effectiveness. This course looks at historical trends as well as emerging changes in employees and the workplace. Directions for future research and implications for practice will be emphasized.

Course Objectives:

- Be able to summarize and identify applications of the theories, concepts, models and research in the field of positive organizational psychology.
- Personally reflect and deepen awareness of leadership skills, work attitudes, and analytical skills in relationship to the field.
- Demonstrate ability to be effective leaders and team members within business organizations, educational environments, and/or community settings.

Course Contents:

Module-I: The changing world of work
Introduction to positive psychology and its application to the workplace
Understand the world of work, upcoming trends that will affect work
Management of today's multi-generational and diverse work force

Module-II: Positive work environments for individuals and organizations:
Employee engagement- what causes individuals to join an organization and why they stay or leave, person-centered approach to engagement
Understand the concept of work as meaning
Impact of employee well-being on the organization and impact of feelings about work on the individual's well-being.
Bringing Positive Psychology to Organizational Psychology

Module-III: Enabling a positive work life
Understand the benefits of coaching, mindfulness, and strengths development in the workplace.
Work and home life balance.

Module-IV: Building psychological capital
Identify personal character strengths and understand their relationship with work satisfaction
Developing positivity and a positive team culture
Maintaining positive relationships at work

PROBLEM SOLVING AND CREATIVE THINKING

Course Code: BEH2251 **Credit Units: 01**

Course Objective:
To enable the students:
- Understand the process of problem solving and creative thinking.
- Facilitation and enhancement of skills required for decision-making.

Course Contents:
Module I: Thinking as a tool for Problem Solving
What is thinking: The Mind/Brain/Behaviour
Critical Thinking and Learning:
- Making Predictions and Reasoning
- Memory and Critical Thinking
- Emotions and Critical Thinking

Thinking skills

Module II: Hindrances to Problem Solving Process
Perception
Expression
Emotion
Intellect
Work environment

Module III: Problem Solving Process
Recognizing and Defining a problem
Analyzing the problem (potential causes)
Developing possible alternatives
Evaluating Solutions
Resolution of problem
Implementation
Barriers to problem solving:
- Perception
- Expression
- Emotion
- Intellect
- Work environment

Module IV: Plan of Action
Construction of POA
Monitoring
Reviewing and analyzing the outcome

Module V: Creative Thinking
Definition and meaning of creativity
The nature of creative thinking

STRESS AND COPING STRATEGIES

Course Code: BEH2451/ SEBS2401 **Credit Units: 01**

Course Objective:
To develop an understanding the concept of stress its causes, symptoms and consequences.
To develop an understanding the consequences of the stress on one's wellness, health, and work performance.

Course Contents:
Module I: Stress
Meaning & Nature
Characteristics
Types of stress

Module II: Stages and Models of Stress
Stages of stress
The physiology of stress
Stimulus-oriented approach.
Response-oriented approach.
The transactional and interact ional model.
Pressure – environment fit model of stress.

Module III: Causes and symptoms of stress
Personal
Organizational
Environmental

Module IV: Consequences of stress
Effect on behaviour and personality
Effect of stress on performance
Individual and Organizational consequences with special focus on health

Module V: Strategies for stress management
Importance of stress management
Healthy and Unhealthy strategies
Peer group and social support
Happiness and well-being

Module VI: End-of-Semester Appraisal
Viva based on personal journal
Assessment of Behavioural change as a result of training
Exit Level Rating by Self and Observer

INTERPERSONAL COMMUNICATION & RELATIONSHIP MANAGEMENT

Course Code: BEH2651 **Credit Units: 01**

Course Objective:
This course aims at imparting an understanding of:
Interpersonal communication and relationship
Strategies for healthy interpersonal relationship
Effective management of emotions
Building interpersonal competence

Course Contents:
Module I: Interpersonal Communication
Importance of Behavioural/ Interpersonal Communication
Types – Self and Other Oriented
Rapport Building – NLP, Communication Mode
Steps to improve Interpersonal Communication

Module II: Interpersonal Styles
Transactional Analysis
Life Position/Script Analysis
Games Analysis
Interactional and Transactional Styles
Bridging differences in Interpersonal Relationship through TA
Communication Styles

Module III: Conflict Management and Negotiation
Meaning and Nature of conflicts
Styles and techniques of conflict management
Meaning of Negotiation
Process and Strategies of Negotiation
Interpersonal Communication: Conflict Management and Negotiation

Module IV: Interpersonal Relationship Development
Importance of Interpersonal Relationships
Interpersonal Relationship Skills
Types of Interpersonal Relationships
Relevance of Interpersonal Communication in Relationship Development

Module V: Impression Management
Meaning & Components of Impression Management
Impression Management Techniques
Impression Management Training-Self help and Formal approaches

PROBLEM SOLVING AND CREATIVE THINKING

Course Code: BEH2251 **Credit Units: 01**

Course Objective:
To enable the students:
- Understand the process of problem solving and creative thinking.
- Facilitation and enhancement of skills required for decision-making.

Course Contents:
Module I: Thinking as a tool for Problem Solving
What is thinking: The Mind/Brain/Behaviour
Critical Thinking and Learning:
- Making Predictions and Reasoning
- Memory and Critical Thinking
- Emotions and Critical Thinking

Thinking skills

Module II: Hindrances to Problem Solving Process
Perception
Expression
Emotion
Intellect
Work environment

Module III: Problem Solving Process
Recognizing and Defining a problem
Analyzing the problem (potential causes)
Developing possible alternatives
Evaluating Solutions
Resolution of problem
Implementation
Barriers to problem solving:
- Perception
- Expression
- Emotion
- Intellect
- Work environment

Module IV: Plan of Action
Construction of POA
Monitoring
Reviewing and analyzing the outcome

Module V: Creative Thinking
Definition and meaning of creativity
The nature of creative thinking

GROUP DYNAMICS AND TEAM BUILDING

Course Code: BEH2351 **Credit Units: 01**

Course Objective:
To inculcate in the students an elementary level of understanding of group/team functions.
To develop team spirit and to know the importance of working in teams.

Course Contents:

Module I: Group formation
Definition and Characteristics
Importance of groups
Classification of groups
Stages of group formation
Benefits of group formation

Module II: Group Functions
External Conditions affecting group functioning: Authority, Structure, Org. Resources, Organizational policies etc.
Internal conditions affecting group functioning: Roles, Norms, Conformity, Status, Cohesiveness, Size, Inter group conflict.
Group Cohesiveness and Group Conflict
Adjustment in Groups

Module III: Teams
Meaning and nature of teams
External and internal factors effecting team
Building Effective Teams
Consensus Building
Collaboration

Module IV: Leadership
Meaning, Nature and Functions
Self leadership
Leadership styles in organization
Leadership in Teams

Module V: Power to empower: Individual and Teams
Meaning and Nature
Types of power
Relevance in organization and Society

Personality: Definition& Relevance
Importance of nature & nurture in Personality Development
Importance and Recognition of Individual differences in Personality
Accepting and Managing Individual differences (Adjustment Mechanisms)
Intuition, Judgment, Perception & Sensation (MBTI)
BIG5 Factors

Module II: Socialization
Nature of Socialization
Social Interaction
Interaction of Socialization Process
Contributions to Society & Nation

Module III: Patriotism and National Pride
Sense of Pride and Patriotism
Importance of Discipline and hard work
Integrity and accountability

Module IV: Human Rights, Values and Ethics
Meaning of Human Rights
Human Rights Awareness
Importance of human rights
Values and Ethics- Learning based on project work on Scriptures like Ramayana, Mahabharata, Gitaetc

Module V: Personal and Professional Excellence
Personal excellence:

- Identifying Long-term choices and goals
- Uncovering talent, strength and style

Alan P. Rossiter's eight aspects of Professional Excellence
Resilience during challenge and loss
Continued Reflection (Placements, Events, Seminars, Conferences, Projects, Extracurricular

Syllabus – Sixth Semester

INTERPERSONAL COMMUNICATION AND RELATIONSHIP MANAGEMENT

Course Code: BEH2651 **Credit Units: 01**

Course Objective:
This course aims at imparting an understanding of:
Interpersonal communication and relationship.
Strategies for healthy interpersonal relationship
Effective management of emotions.
Building interpersonal competence.

Course Contents:
Module I: Interpersonal Communication
Importance of Behavioural/ Interpersonal Communication
Types – Self and Other Oriented
RapportBuilding – NLP, Communication Mode
Steps to improve Interpersonal Communication

Module II: Interpersonal Styles
Transactional Analysis
Life Position/Script Analysis
Games Analysis
Interactional and Transactional Styles
Bridging differences in Interpersonal Relationship through TA
Communication Styles

Module III: Conflict Management and Negotiation
Meaning and Nature of conflicts
Styles and techniques of conflict management
Meaning of Negotiation
Process and Strategies of Negotiation
Interpersonal Communication: Conflict Management and Negotiation

Module IV: Interpersonal Relationship Development
Importance of Interpersonal Relationships
Interpersonal Relationship Skills
Types of Interpersonal Relationships
Relevance of Interpersonal Communication in Relationship Development

Module V: Impression Management
Meaning & Components of Impression Management
Impression Management Techniques
Impression Management Training-Self help and Formal approaches

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Syllabus – Seventh Semester

SELF-DEVELOPMENT AND INTERPERSONAL SKILLS

Course Code: BEH4151 **Credit Units: 01**

Course Objective:
This course aims at imparting an understanding of:
Self and the process of self exploration
Learning strategies for development of a healthy self esteem
Importance of attitudes and their effect on work behaviour
Effective management of emotions and building interpersonal competence.

Course Contents:

Module I: Understanding Self
Formation of self concept
Dimension of Self
Components of self
Self Competency

Module II: Self-Esteem: Sense of Worth
Meaning and Nature of Self Esteem
Characteristics of High and Low Self Esteem
Importance & need of Self Esteem
Self esteem at work
Steps to enhance Self Esteem

Module III: Emotional Intelligence: Brain Power
Introduction to EI
Difference between IQ, EQ and SQ
Relevance of EI at workplace
Self assessment, analysis and action plan

Module IV: Managing Emotions and Building Interpersonal Competence
Need and importance of Emotions
Healthy and Unhealthy expression of emotions
Anger: Conceptualization and Cycle
Developing emotional and interpersonal competence
Self assessment, analysis and action plan

Module V: Leading Through Positive Attitude
Understanding Attitudes
Formation of Attitudes
Types of Attitudes
Effects of Attitude on
Behaviour
Perception
Motivation
Stress

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Syllabus – Eighth Semester

PROFESSIONAL EXCELLENCE

Course Code: BEH4451 **Credit Units: 01**

Course Objective:
This course aims at imparting an understanding of:
Build and leverage your professional reputation
Maintain focus in pressure situations
Make a balanced choice between professional and personal commitments

Course Contents:
Module I: Individual, Society and Nation
Individual Differences and Dimensions of Personality
Socialization Process
Relating to the Nation: Values, Culture, Religion
Sense of pride and Patriotism
Managing Diversity

Module II: Components of Excellence
Personal Excellence:
Identifying long-term choices and goals
Uncovering the talent, strength & style
Analyzing choke points in your personal processes by analysis in area of placements, events, seminars, conference, extracurricular activities, projects etc.
Developing professional power: Goal-setting, time management, handling criticism, interruptions and time wasters

Module III: Career Planning
Knowing one's Interest and Aptitude
Identifying available Resources
Setting goals to maintain focus:
Developing Positive attributes in personality
Self-reliance and Employability skills

Module IV: Stress Management for Healthy Living
Meaning and Nature of Stress
Stages of stress
Causes and Consequences of stress: Personal, Organizational and Environmental
Personal Styles and strategies of coping

Module V: Professional Success
Building independence &interdependence
Reducing resistance to change
Continued reflection (Placements, events, seminars, conferences, projects extracurricular Activities etc.)

Syllabus – Ninth Semester

LEADING THROUGH TEAMS

Course Code: BEH4351 **Credit Units: 01**

Course Objective:
This course aims to enable students to:
Understand the concept and building of teams
Manage conflict and stress within team
Facilitate better team management and organizational effectiveness through universal human values.

Course Contents:
Module I: Teams: An Overview
Team Design Features: team vs. group
Effective Team Mission and Vision
Life Cycle of a Project Team
Rationale of a Team, Goal Analysis and Team Roles

Module II: Team & Sociometry
Patterns of Interaction in a Team
Sociometry: Method of studying attractions and repulsions in groups
Construction of sociogram for studying interpersonal relations in a Team

Module III: Team Building
Types and Development of Team Building
Stages of team growth
Team performance curve
Profiling your Team: Internal & External Dynamics
Team Strategies for organizational vision
Team communication

Module IV: Team Leadership & Conflict Management
Leadership styles in organizations
Self Authorized team leadership
Causes of team conflict
Conflict management strategies
Stress and Coping in teams

Module V: Global Teams and Universal Values
Management by values
Pragmatic spirituality in life and organization
Building global teams through universal human values
Learning based on project work on Scriptures like Ramayana, Mahabharata, Gita etc.

Module VI: End-of-Semester Appraisal
Viva based on personal journal
Assessment of Behavioural change as a result of training
Exit Level Rating by Self and Observer

PAPER-I: PSYCHOSOCIAL FOUNDATION OF BEHAVIOR AND PSYCHOPATHOLOGY

Course Code: PSY5101 **Credit Units: 12**

Aims: The psychosocial perspectives attempt to understand human cognition, motives, perceptions and behavior as well as their aberrations as product of an interaction amongst societal, cultural, familial and religious factors. The overall aim is to introduce conceptualizations of mental health problems within the psychosocial framework, giving due considerations to contextual issues. Each Module in this paper pays attention to the different types of causal factors considered most influential in shaping both vulnerability to psychopathology and the form that pathology may take.

Objectives: By the end of Part-I, trainees are required to demonstrate ability to:

- Demonstrate a working knowledge of the theoretical application of the psychosocial model to various disorders.
- Make distinctions between universal and culture-specific disorders paying attention to the different types of sociocultural causal factors.
- Demonstrate an awareness of the range of mental health problems with which clients can present to services, as well as their psychosocial/contextual mediation.
- Carry out the clinical work up of clients with mental health problems and build psychosocial formulations and interventions, drawing on their knowledge of psychosocial models and their strengths and weaknesses.
- Apply and integrate alternative or complementary theoretical frameworks, for example, biological and/or religious perspectives, sociocultural beliefs and practices etc. in overall management of mental health problems.
- Describe, explain and apply current code of conduct and ethical principles that apply to clinical psychologists working in the area of mental health and illness.
- Describe Mental Health Acts and Policies, currently prevailing in the country and their implications in professional activities of clinical psychologists.

Academic Format of Modules: Learning would be mainly through clinical workup of clients presenting with range of mental health problems, and supplemented by lectures, seminars and tutorials, allowing trainees to participate in collaborative discussion.

Evaluation: Theory – involving long and short essays

Course Contents: Part-A (Psychosocial Foundations of Behavior)

Module - I: **Introduction**
Overview of the profession and practice; history and growth; professional role and functions; current issues and trends; areas of specialization; ethical and legal issues; code of conduct

Module - II: **Mental health and illness**
Mental health care – past and present; stigma and attitude towards mental illness; concept of mental health and illness; perspectives – psychodynamic, behavioral, cognitive, humanistic, existential and biological models of mental health/illness;

Module - III: Epidemiology
Studies in Indian context; tools available/standardized for epidemiological surveys; socio-cultural correlates of mental illness; religion and mental health; psychological well-being and quality of life - measures and factors influencing

Module - IV: Self and relationships
Self-concept, self-image, self-perception and self-regulations in mental health and illness; learned helplessness and attribution theories; social skill model; interpersonal and communication models of mental illness; stress diathesis model, resilience, coping and social support.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module - V: Family influences
Early deprivation and trauma; neglect and abuse; attachment; separation; inadequate parenting styles; marital discord and divorce; maladaptive peer relationships; communication style; family burden; emotional adaptation; expressed emotions and relapse.

Module - VI: Societal influences
Discrimination in race, gender and ethnicity; social class and structure, poverty and unemployment; prejudice, social change and uncertainty; crime and delinquency; social tension & violence; urban stressors; torture & terrorism; culture shock; migration; religion & gender related issues with reference to India.

Module - VII: Disability
Definition and classification of disability; psychosocial models of disability; impact, needs and problems; issues related to assessment/certification of disability – areas and measures.

Module - VIII: **Rehabilitation**
Approaches to rehabilitation; interventions in the rehabilitation processes; models of adaptation to disability; family and caregivers issues; rights of mentally ill; empowerment issues; support to recovery.

Module - IX: Policies and Acts
Rehabilitation Policies and Acts; assistance, concessions, social benefits and support from government and voluntary organizations; contemporary challenges; rehabilitation ethics and professional code of conduct

Course Contents: Part-B (Psychopathology)

Module - X: **Introduction to psychopathology**
Definition; concepts of normality and abnormality; clinical criteria of abnormality; continuity (dimensional) versus discontinuity (categorical), and prototype models of psychopathology; classification and taxonomies – reliability and utility; classificatory systems, currently in use and their advantages and limitations.

Module - XI: **Signs and symptoms**
Disorders of consciousness, attention, motor behavior, orientation, experience of self, speech, thought, perception, emotion, and memory.

Module - XII: Psychological theories
Psychodynamic; behavioral; cognitive; humanistic; interpersonal; psychosocial; and other prominent theories/models of principal clinical disorders and problems, viz. anxiety, obsessive-compulsive, somatoform, dissociative, adjustment, sexual, substance use, personality, suicide, childhood adolescence, psychotic, mood disorders, and culture-specific disorders.

Module - XIII: **Indian thoughts**
Concept of mental health and illness; nosology and taxonomy of mental illness; social identity and stratification (Varnashrama Vyawastha); concept of – cognition, emotion, personality, motivation and their disorders

Examination Scheme:

	Internal Assessment (30 Marks)				**Final Exam**	**Total Marks**
Components	CT	H/P/V/Q	CT	A		
Weightage (%)	10	5	10	5	70	100

CT-Class Test; **H**-Home Assignment; **P**-Presentation; **V**-Viva; **Q**-Quiz; **A**-Attendance; **EE**-End Term Exam

PAPER-II: PSYCHIATRY

Course Code: PSY5103 **Credit Units: 12**

Aim: The aim is to train in conceptualization of psychopathology from different etiological perspectives, eliciting phenomenology and arrive at the clinical diagnosis following a classificatory system and propose/carry out psychological interventions including psychosocial treatment/management for the entire range of psychological disorders. Also, to train in assessing the caregivers' burden, disability and dysfunctions that are often associated with mental disorders and intervene as indicated in a given case.

Objectives: By the end of Part-I, trainees are required to demonstrate ability to:

- Demonstrate an understanding of a clinically significant behavioral and psychological syndrome, and differentiate between child and adult clinical features/presentation.
- Understand that in many ways the culture, societal and familial practices shape the clinical presentation of mental disorders, and understand the role of developmental factors in adult psychopathology.
- Carryout the clinical work up of clients presenting with the range of mental health problems and make clinical formulations/diagnosis drawing on their knowledge of a pertinent diagnostic criteria and phenomenology.
- Summarizes the psychosocial, biological and socio-cultural causal factors associated with mental health problems and neuropsychological disorders with an emphasis on bio-psychosocial and other systemic models.
- Carryout with full competence the psychological assessment, selecting and using a variety of instruments in both children and adults.
- Describe various intervention programs in terms of their efficacy and effectiveness with regard to short and longer term goals, and demonstrate beginning competence in carrying out the indicated interventions, monitor progress and outcome.
- Discuss various pharmacological agents that are used to treat common mental disorders and their mode of action.
- Demonstrate an understanding of caregiver, and family burden and their coping style.
- Assess the disability/dysfunctions that are associated with mental health problems, using appropriate measures.
- Discuss the medico-legal and ethical issues in patients requiring chronic care and institutionalization.

Academic Format of Modules: The learning would be primarily through clinical workups of cases having psychiatric disorders. A mixed lectures/seminar format, allowing trainees to participate in collaborative discussion, could be adapted in addition, for imparting theory components.

Evaluation: Theory – involving long and short essays, practical/clinical exam in psychological assessment of psychiatric cases and comprehensive viva.

Course Contents:

Module - I: Introduction

Approach to clinical interviewing and diagnosis; case history; mental status examination; organization and presentation of psychiatric information; diagnostic formulation; classificatory system in use.

Module - II: Psychoses

Schizophrenia, affective disorders, delusional disorders and other forms of psychotic disorders – types, clinical features, etiology and management

Module - III: Neurotic, stress-related and somatoform disorders

Types, clinical features, etiology and management

Module - IV: **Disorders of personality and behavior**

Specific personality disorders; mental & behavioral disorders due to psychoactive substance use; habit and impulse disorders; sexual

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

disorders and dysfunctions – types, clinical features, etiology and management.

Module - V: Organic mental disorders
Dementia, delirium and other related conditions with neuralgic and systemic disorders – types, clinical features, etiology and management.

Module-VI: Behavioral, emotional and developmental disorders of childhood and adolescence: types, clinical features, etiology and management.

Module - VII: Mental retardation
Classification, etiology and management

Module - VIII: Neurobiology of mental disorders
Neurobiological theories of psychosis, mood disorders, suicide, anxiety disorders, substance use disorders and other emotional and behavioral syndromes.

Module - IX: **Therapeutic approaches**
Drugs, ECT, psychosurgery, psychotherapy, and behavior therapy, preventive and rehabilitative strategies – halfway home, sheltered workshop, daycare, and institutionalization.

Module - X: Consultation-liaison psychiatry
Psychiatric consultation in general hospital; primary care setting

Module - XI: **Special populations/Specialties**
Geriatric, terminally ill, HIV/AIDS, suicidal, abused, violent and non-cooperative patients; psychiatric services in community, and following disaster/calamity

Module - XII: **Mental health policies and legislation**
Mental Health Act of 1987, National Mental Health Program 1982, the Persons With Disabilities (equal opportunities, protection of rights and full participation) Act 1995; Rehabilitation Council of India (RCI) Act of 1993, National Trust for Mental Retardation, CP and Autistic Children 1999, Juvenile Justice Act of 1986; ethical and forensic issues in psychiatry practice.

Examination Scheme:

	Internal Assessment (30 Marks)				**Final Exam**	**Total Marks**
Components	CT	H/P/V/Q	CT	A		
Weightage (%)	10	5	10	5	70	100

PAPER-III: STATISTICS AND RESEARCH METHODOLOGY

Course Code: PSY5106 **Credit Units: 12**

Aim: The aim of this paper is to elucidate various issues involved in conduct of a sound experiment/survey. With suitable examples from behavioral field, introduce the trainees to the menu of statistical tools available for their research, and to develop their understanding of the conceptual bases of these tools. Tutorial work will involve exposure to the features available in a large statistical package (SPSS) while at the same time reinforcing the concepts discussed in lectures.

Objectives: By the end of Part-II, trainees are required to demonstrate ability to:

- Understand the empirical meaning of parameters in statistical models
- Understand the scientific meaning of explaining variability
- Understand experimental design issues - control of unwanted variability, confounding and bias.
- Take account of relevant factors in deciding on appropriate methods and instruments to use in specific research projects.
- Understand the limitations and shortcomings of statistical models
- Apply relevant design/statistical concepts in their own particular research projects.
- Analyze data and interpret output in a scientifically meaningful way
- Generate hypothesis/hypotheses about behavior and prepare a research protocol outlining the methodology for an experiment/survey.
- Critically review the literature to appreciate the theoretical and methodological issues.

Academic Format of Modules: The course will be taught mainly in a mixed lecture/tutorial format, allowing trainees to participate in collaborative discussion. Demonstration and hands-on experience with SPSS program are desired activities.

Evaluation: Theory - involving long and short essays, and problem-solving exercises.

Course Contents:

Module - I: Introduction

Various methods to ascertain knowledge, scientific method and its features; problems in measurement in behavioral sciences; levels of measurement of psychological variables - nominal, ordinal, interval and ratio scales; test construction - item analysis, concept and methods of establishing reliability, validity and norms.

Module - II: Sampling

Probability and non-probability; various methods of sampling - simple random, stratified, systematic, cluster and multistage sampling; sampling and non-sampling errors and methods of minimizing these errors

Module - III: Concept of probability

Probability distribution - normal, poisson, binomial; descriptive statistics - central tendency, dispersion, skewness and kurtosis

Module - IV: Hypothesis testing

Formulation and types; null hypothesis, alternate hypothesis, type I and type II errors, level of significance, power of the test, p-value. Concept of standard error and confidence interval

Module - V: **Tests of significance- Parametric tests**

Requirements, "t" test, normal z-test, and "F" test including post-hoc tests, one-way and two-way analysis of variance, analysis of covariance, repeated measures analysis of variance, simple linear correlation and regression.

Module – VI: **Tests of significance - Non-parametric tests**

Requirements, onesample tests – sign test, sign rank test, median test, Mc Nemer test; two-sample test – Mann Whitney U test, Wilcoxon rank sum test, Kolmogorov-Smirnov test, normal scores test, chi-square test;

Prof. (Dr.) Anil Kumar

Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

ksample tests - Kruskal Wallies test, and Friedman test, Anderson darling test, Cramer-von Mises test.

Module - VII: Experimental design
Randomization, replication, completely randomized design, randomized block design, factorial design, crossover design, single subject design, non-experimental design.

Module - VIII: **Epidemiological studies**
Prospective and retrospective studies, case control and cohort studies, rates, sensitivity, specificity, predictive values, Kappa statistics, odds ratio, relative risk, population attributable risk, Mantel Haenzel test, prevalence, and incidence. Age specific, disease specific and adjusted rates, standardization of rates. Tests of association, 2 x 2 and row x column contingency tables

Module - IX: **Multivariate analysis**
Introduction, Multiple regression, logistic regression, factor analysis, cluster analysis, discriminant function analysis, path analysis, MANOVA, Canonical correlation, and Multidimensional scaling.

Module - X: Sample size estimation
Sample size determination for estimation of mean, estimation of proportion, comparing two means and comparing two proportions.

Module - XI: **Qualitative analysis of data**
Content analysis, qualitative methods of psychosocial research

Module - XII: **Use of computers**
Use of relevant statistical package in the field of behavioral science and their limitations

Examination Scheme:

	Internal Assessment (30 Marks)				**Final Exam**	**Total Marks**
Components	CT	H/P/V/Q	CT	A		
Weightage	10	5	10	5	70	100

CT-Class Test; **H**-Home Assignment; **P**-Presentation; **V**-Viva; **Q**-Quiz; **A**-Attendance; **EE**-End Term Exam

PAPER-IV: PRACTICAL: PSYCHOLOGICAL ASSESSMENT INCLUDING VIVA-VOCE

Course Code: PSY5104 **Credit Units: 12**

Aim: To provide hands-on experience in acquiring the necessary skills and competency in selecting, administering, scoring and interpreting psychological tests often employed in clients with mental or neuropsychological disorders. Since psychological assessment involves integration of information from multiple sources, the trainees are required to be given extensive exposure in working up of cases and carrying out the assessment at all levels. Typical areas of focus for psychological assessment includes (not necessarily limited to): cognition, intelligence, personality, diagnostic, levels of adjustment, disability/functional capacity, neuropsychological functions, clinical ratings of symptomatology, variables that help/direct treatment, and assess treatment outcomes.

Objectives: By the end of Part-I, trainees are required to demonstrate ability to:

- Use relevant criteria to assess the quality and appropriateness of a psychological test and evaluate its strengths and weaknesses for clinical purposes.
- Able to carry out the clinical work-up and discuss the diagnostic possibilities based on the history and mental status examination of the clients with psychological/neuropsychological problems.
- Synthesize and integrate collateral information from multiple sources and discuss the rationale for psychological assessment as relevant to the areas being assessed.
- Select and justify the use of psychological tests and carry out the assessment as per the specified procedures in investigating the relevant domains.
- Interpret the findings in the backdrop of the clinical history and mental status findings and arrive at a diagnosis.
- Prepare the report of the findings as relevant to the clinical questions asked or hypothesis set up before the testing began, and integrate the findings in service activities.

Academic Format of Modules: Acquiring the required competency/skills would be primarily through clinical workups of cases having psychological/neuropsychological disorders and carrying out the indicated psychological assessments within the clinical context. Demonstration and tutorials shall be held for imparting practical/theory components of the psychological tests.

Evaluation: Practical/clinical – involve working up cases and carrying out the psychological assessment within clinical context and viva voce.

Course Contents:

Module - I: Introduction

Case history; mental status examination; rationale of psychological assessment; behavioral observations, response recording, and syntheses of information from different sources; formats of report writing

Module - II: Tests of cognitive functions

Bender gestalt test; Wechsler memory scale; PGI memory scale; Wilcoxen cord sorting test, Bhatia's battery of performance tests of intelligence; Binet's test of intelligence (locally standardized); Raven's progressive matrices (all versions); Wechsler adult intelligence scale – Indian adaptation (WAPIS – Ramalingaswamy's), WAIS-R.

Module - III: Tests for diagnostic clarification

A) Rorschach psychodiagnostics, B) Tests for thought disorders – color form sorting test, object sorting test, proverbs test, C) Minnesota multiphasic personality inventory; multiphasic questionnaire, clinical analysis questionnaire, IPDE, D) screening instruments such as GHQ, hospital anxiety/depression scale etc. to detect psychopathology.

Module - IV: **Tests for adjustment and personality assessment**

A) Questionnaires and inventories – 16 personality factor questionnaire, NEO-5 personality inventory, temperament and character inventory, Eyesenk's personality inventory, Eysenck's personality

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

questionnaire, self-concept and self-esteem scales, Rottor's locus of control scale, Bell's adjustment inventory (students' and adults'), subjective wellbeing questionnaires, QOL , B) projective tests – sentence completion test, picture frustration test, draw-a-person test; TAT – Murray's and Uma Chowdhary's.

Module - V: **Rating scales**
Self-rated and observer-rated scales of different clinical conditions such as anxiety, depression, mania, OCD, phobia, panic disorder etc. (including Leyton's obsessional inventory, Y-BOCS, BDI, STAI, HADS, HARS, SANS, SAPS, PANSS, BPRS), issues related to clinical applications and recent developments.

Module - VI: Psychological assessment of children
A) Developmental psychopathology check list, CBCL, B) Administration, scoring and interpretation of tests of intelligence scale for children such as SFB, C-RPM, Malin's WISC, Binet's tests, and developmental schedules (Gesell's, Illingworth's and other) Vineland social maturity scale, AMD adaptation scale for mental retardation, BASIC-MR, developmental screening test (Bharatraj's), C) Tests of scholastic abilities, tests of attention, reading, writing, arithmetic, visuo-motor gestalt, and integration, D) Projective tests – Raven's controlled projection test, draw-a-person test, children's apperception test, E) Clinical rating scales such as for autism, ADHD etc.

Module - VII: **Tests for people with disabilities**
WAIS-R, WISC-R (for visual handicapped), blind learning aptitude test, and other interest and aptitude tests, Kauffman's assessment battery and such other tests/scales for physically handicapped individuals

Module - VIII: Neuropsychological assessment
LNNB, Halstead-Reitan battery, PGI-BBD, NIMHANS and other batteries of neuropsychological tests in current use

Core Tests:
1. Stanford Binet's test of intelligence (any vernacular version)
2. Raven's test of intelligence (all forms)
3. Bhatia's battery of intelligence tests
4. Wechsler adult performance intelligence scale
5. Malin's intelligence scale for children
6. Gesell's developmental schedule
7. Wechsler memory scale
8. PGI memory scale
9. 16 personality factor questionnaire
10. NEO-5 personality inventory
11. Temperament and character inventory
12. Children personality questionnaire
13. Clinical analysis questionnaire
14. Multiphasic questionnaire
15. Object sorting/classification test
16. Sentence completion test
17. Thematic apperception test
18. Children' apperception test
19. Rorschach psychodiagnostics
20. Neuropsychological battery of tests (any standard version)

A certificate by the head of the department that the candidate has attained the required competence in all of the above tests shall be necessary for appearing in the university examinations of Part – I. However, if the center opts to test and certify the competency in neuropsychological tests as part of the requirements for appearing in the university examinations of Part - II (i.e. excluding it from Part - I), it could be done so. In such case, the Practical/Clinical examinations of Part – II shall include an examination in this area, in addition to examination in Psychological Therapies.

PAPER-V: SUBMISSION OF PSYCHODIAGNOSTIC RECORDS

Course Code: PSY5105 **Credit Units: 12**

Course Contents:

Five full-length Psycho-diagnostic Records: out of which one record each should be related to, child and neuropsychological assessment. The records should include a summary of the clinical history organized under relevant headings, and a discussion on

a) rationale for testing,
b) areas to be investigated,
c) tests administered and their rationale,
d) test findings and
e) impression

Examination Scheme:

Components	Submission of five cases of full-length Psycho-diagnostics Report
Weightage (%)	100

PAPER-I: PSYCHOTHERAPY AND COUNSELLING

Course Code: PSY5301 **Credit Units: 12**

Aim: Impart knowledge and skills necessary to carry out psychological interventions in mental health problems with required competency. As a prelude to problem-based learning within a clinical context, the trainees are introduced to factors that lead to development of an effective working therapeutic alliance, pre-treatment assessment, setting therapy goals, evaluation of success of therapy in producing desired changes, and variables that affect the therapy processes. Further, the aim is to equip the trainees with various theories of clinical problems, and intervention techniques, and their advantages and limitations.

Objectives: By the end of Part-II, trainees are required to demonstrate ability to:

- Describe what factors are important in determining how well patients do in psychotherapy?
- Demonstrate an ability to provide a clear, coherent, and succinct account of patient's problems and to develop an appropriate treatment plan.
- Demonstrate a sense of working collaboratively on the problem and ability to foster an effective alliance.
- Demonstrate a working knowledge of theoretical application of various approaches of therapy to clinical conditions.
- Set realistic goals for intervention taking into consideration the social and contextual mediation.
- Carry out specialized assessments and interventions, drawing on their knowledge of pertinent outcome/evidence research.
- Use appropriate measures of quantifying changes and, apply and integrate alternative or complementary theoretical approach, depending on the intervention outcome.
- Demonstrate skills in presenting and communicating some aspects of current intervention work for assessment by other health professionals, give and receive constructive feedback.
- Demonstrate ability to link theory-practice and assimilate clinical, professional, academic and ethical knowledge in their role of a therapist.
- Present a critical analysis of intervention related research articles and propose their own methods/design of replicating such research.

Academic Format of Modules: Acquiring the required competency/skills would be primarily through clinical workups and carrying out of various treatment techniques, under supervision, within clinical context. The trainees are required to be involved in all clinical service activities – institutional or community based, of the center. Demonstration, clinical issue seminar, clinical seminar, clinical case conferences are required to be planned to impart the necessary knowledge and skills.

Evaluation: Theory - involving long and short essays, and practical/clinical - involving workup and assessment of clinical cases with viva voce.

Course Contents:

Module - I: Introduction to Psychotherapy

Definitions, objectives, issues related to training professional therapists; ethical and legal issues involved in therapy work; rights and responsibilities in psychotherapy; issues related to consent (assent in case of minors); planning and recording of therapy sessions; structuring and setting goals; pre- and postassessment; practice of evidence-based therapies.

Module - II: Therapeutic Relationship

Client and therapist characteristics; illness, technique and other factors influencing the relationship

Module - III: Interviewing

Objectives of interview, interviewing techniques, types of interview, characteristics of structured and unstructured interview, interviewing skills (micro skills), open-ended questions, clarification, reflection, facilitation

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

and confrontation, silences in interviews, verbal and non-verbal components

Module - IV: **Affective psychotherapies**
Origin, basis, formulation, procedures, techniques, stages, process, outcome, indications, and research & current status with respect to psychodynamic, brief psychotherapy, humanistic, existential, gestalt, person-centered, Adlerian, transactional analysis, reality therapy, supportive, clinical hypnotherapy, play therapy, psychodrama, and oriental approaches such as yoga, meditation, shavasana, pranic healing, reiki, tai chi etc.

Module-V: Behavior therapies
Origin, foundations, principles & methodologies, problems and criticisms, empirical status, behavioral assessment, formulations and treatment goals, Desensitization - (imaginal, in-vivo, enriched, assisted), Extinction - (graded exposure, flooding and response prevention, implosion, covert extinction, negative practice, stimulus satiation), Skill training - (assertiveness training, modeling, behavioral rehearsal), Operant procedures - (token economy, contingency management), Aversion - (faradic aversion therapy, covert sensitization, aversion relief procedure, anxiety relief procedure and avoidance conditioning), Self-control procedures - (thought stop, paradoxical intention, stimulus satiation), Biofeedback – (EMG, GSR, EEG, Temp., EKG), Behavioral counseling, Group behavioral approaches, Behavioral family/marital therapies.

Module - VI: Cognitive therapies
Cognitive model, principles and assumptions, techniques, indications and current status of rational emotive behavior therapy, cognitive behavior therapy, cognitive analytic therapy, dialectical behavior therapy, problem-solving therapy, mindfulness based cognitive therapy, schema focused therapy, cognitive restructuring, and other principal models of cognitive therapies.

Module – VII: Systemic therapies
Origin, theoretical models, formulation, procedures, techniques, stages, process, outcome, indications, and research & current status with respect to family therapy, marital therapy, group therapy, sex therapy, interpersonal therapy and other prominent therapies.

Module – VIII: Physiological therapies
Origin, basis, formulation, procedures, techniques, stages, process, outcome, indications, and current status with respect to progressive muscular relaxation, autogenic training, biofeedback, eye-movement desensitization and reprocessing, and other forms of evidence-based therapies

Module – IX: **Counseling**
Definition and goals, techniques, behavioral, cognitive and humanistic approaches, process, counseling theory and procedures to specific domains of counseling

Module - X: Therapy in special conditions
Therapies and techniques in the management of deliberate self harm, bereavement, traumatic, victims of man-made or natural disasters, in crisis, personality disorders, chronic mental illness, substance use, HIV/AIDS, learning disabilities, mental retardation, and such other conditions where integrative/eclectic approach is the basis of clinical intervention.

Module - XI: Therapy with children
Introduction to different approaches, psychoanalytic therapies (Ana Freud, Melanie Klein, Donald Winnicott); special techniques (behavioral and play) for developmental internalizing and externalizing disorders; therapy in special conditions such as psycho-physiological and chronic physical illness; parent and family counseling; therapy with adolescents

Module – XII: Psycho-education (therapeutic education)
Information and emotional support for family members and caregivers, models of therapeutic education, family counseling for a collaborative effort towards recovery, relapse-prevention and successful rehabilitation with regard to various debilitating mental disorders.

Module – XIII: Psychosocial rehabilitation
Rehabilitation services, resources, medical and psychosocial aspects of disability, assessment, group therapy, supportive therapy

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

and other forms of empirically supported psychotherapies for core and peripheral members.

Module - XIV: **Psychotherapy in the Indian Context**
Historical perspective in psychological healing practices from the Vedic period and the systems of Ayurveda and Yoga, contemporary perspectives; socio-cultural issues in the Indian context in practice of psychotherapy; ongoing research related to process and outcome.

Module - XV: Contemporary issues and research
Issues related evidence-based practice, managed care, and research related to process and outcome.

Examination Scheme:

	Internal Assessment (30 Marks)				**Final Exam**	**Total Marks**
Components	CT	H/P/V/Q	CT	A		
Weightage (%)	10	5	10	5	70	100

CT-Class Test; **H**-Home Assignment; **P**-Presentation; **V**-Viva; **Q**-Quiz; **A**-Attendance; **EE**-End Term Exam

PAPER-II: BEHAVIOURAL MEDICINE

Course Code: PSY5302 **Credit Units: 12**

Aim: Health psychology, as one of the subspecialties of applied psychology, has made a notable impact on almost the entire range of clinical medicine. The field deals with psychological theories and methods that contribute immensely to the understanding and appreciation of health behavior, psychosocial and cultural factors influencing the development, adjustment to, treatment, outcome and prevention of psychological components of medical problems. The aim of behavioral medicine is to elucidate the effects of stress on immune, endocrine, and neurotransmitter functions among others, psychological process involved in health choices individuals make and adherence to preventive regimens, the effectiveness of psychological interventions in altering unhealthy lifestyles and in directly reducing illness related to various systems. Further, to provide the required skills and competency to assess and intervene for psychological factors that may predispose an individual to physical illness and that maintain symptoms, in methods of mitigating the negative effects of stressful situations/events, and buffering personal resources.

Objectives: By the end of Part-II, trainees are required to demonstrate ability to:

- Appreciate the impact of psychological factors on developing and surviving a systemic illness.
- Understand the psychosocial impact of an illness and psychological interventions used in this context.
- Understand the psychosocial outcomes of disease, psychosocial interventions employed to alter the unfavorable outcomes.
- Understand the rationale of psychological interventions and their relative efficacy in chronic disease, and carry out the indicated interventions.
- Understand the importance of physician-patient relationships and communication in determining health outcomes.
- Understand of how basic principles of health psychology are applied in specific context of various health problems, and apply them with competence.
- Demonstrate the required sensitivity to issues of death and dying, breaking bad news, and end-of-life issues.
- Carry out specialized interventions during period of crisis, grief and bereavement.
- Understand, assimilate, apply and integrate newer evidence-based research findings in therapies, techniques and processes.
- Critically evaluate current health psychology/behavioral medicine research articles, and present improved design/methods of replicating such research.
- Demonstrate the sense responsibility while working collaboratively with another specialist and foster a working alliance.

Academic Format of Modules: Format would be essentially same as Paper – I on Therapies. The competency/skills are imparted through supervised workups, assessment and practical work of carrying out various treatment techniques within clinical context. Depending on availability of resources at the parent center, the trainees may be posted for extra-institutional learning. Demonstration, clinical issue seminar, clinical seminar, clinical case conferences are required to impart the necessary knowledge and skills. Evaluation: Theory - involving long and short essays, and practical/clinical - involving workup and assessment of clinical cases with viva voce.

Course Contents:

Module-I: Introduction

Definition, boundary, psychological and behavioral influences on health and illness, neuroendocrine, neurotransmitter and neuroimmune responses to stress, negative affectivity, behavioral patterns, and coping styles, psychophysiological models of disease, theoretical models of health behavior, scope and application of psychological principles in health, illness and health care.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module – II: **Central nervous system**
Cognitive, personality, behavioral, emotional disturbances in major CNS diseases like cerebrovascular (stroke, vascular dementia etc.), developmental (cerebral palsy), degenerative (Parkinson's etc.), trauma (traumatic brain and spinal cord injury), convulsive (epilepsy), and infectious (AIDS dementia), assessment and methods for psychological intervention and rehabilitation with such patients.

Module – III: Cardiovascular system
Psychosocial, personality, lifestyle, and health practice issues, psychobehavioral responses including coping with illness and functional loss in hypertension, MI, following CABG and other cardiovascular conditions, salient issues with regard to quality-of-life and well-being, empirically proven methods of psychological management of CVS diseases.

Module – IV: **Respiratory system**
precipitants, such as emotional arousal, and other external stimuli, exacerbants such as anxiety and panic symptoms, effects, such as secondary gain, low self-esteem in asthma and other airway diseases, psychological, behavioral and biofeedback strategies as adjunct in the management.

Module – V: **Gastrointestinal system**
Evaluation of psychological factors including personality characteristics and stress/coping style in functional GI disorders such as irritable bowel syndrome, inflammatory bowel disease, peptic ulcer disease, esophageal disorder etc., role of psychotherapy, behavior modification, cognitive restructuring, biofeedback and relaxation training

Module – VI: Genitourinary/renal/reproductive system
Psychosocial issues in male/female sexual dysfunctions, micturition/voiding problems including primary / secondary enuresis, end-stage renal disease, dialysis treatment, primary and secondary infertility, empirically validated psychological and behavioral interventions in these conditions.

Module – VII: **Dermatology:**
Role of stress and anxiety in psychodermatological conditions such as psoriasis, chronic urticaria, dermatitis, alopecia and the impact of these on self-esteem, body image and mood, role of psychological interventions such as relaxation, stress management, counseling and biofeedback strategies.

Module – VIII: Oncology
Psychosocial issues associated with cancer - quality of life, denial, grief reaction to bodily changes, fear of treatment, side effects, abandonment, recurrence, resilience, assessment tools, and goals of interventions for individual and family, and therapy techniques.

Module – IX: HIV/AIDS
Model of HIV disease service program in India, pre- and post-test counseling, psychosocial issues and their resolutions during HIV progress, psychological assessment and interventions in infected adults and children, and family members/caregivers, highly active anti-retroviral treatments (HAART), neuropsychological findings at different stages of infection, issues related to prevention/spreading awareness and interventions in at risk populations.

Module – X: **Pain**
Physiological and psychological processes involved in pain experience and behavior, assessment tools for acute and chronic pain intensity, behavior, and dysfunctions/disability related to pain, psychological interventions such as cognitive, behavioral, biofeedback and hypnotic therapies.

Module – XI: **Terminally ill**
Medical, religious and spiritual definition of death and dying, psychology of dying and bereaved family, strategies of breaking bad news, bereavement and grief counseling, management of pain and other physical symptoms associated with end-of-life distress in patients with cancer, AIDS, and other terminal illness, professional issues related to working in hospice including working through one's own death anxiety, euthanasia – types, arguments for and against.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module – XII: Other general clinical conditions
Application of psychological techniques and their rationale in the clinical care of patients in general medical settings where psychological services appears to affect the outcome of medical management positively, for example in diabetes, sleep disorders, obesity, dental anxiety, burns injury, pre- and postsurgery, preparing for amputation, evaluation of organ donors/recipient, pre- and post-transplantation, organ replacement, hemophiliacs, sensory impairment, rheumatic diseases, abnormal illness behavior, health anxiety etc.

Module – XIII: **Contemporary Issues**
Research and developments in health psychology, psychophysiology, psychoneuroimmunology, psychobiology, sociobiology and their implications, and effects of psychotherapy on the biology of brain

Examination Scheme:

	Internal Assessment (30 Marks)				**Final Exam**	**Total Marks**
Components	CT	H/P/V/Q	CT	A		
Weightage (%)	10	5	10	5	70	100

PAPER-III: BIOLOGICAL FOUNDATION OF BEHAVIOR

Course Code: PSY5306 **Credit Units: 12**

Aim: Brain disorders cause symptoms that look remarkably like other functional psychological disorders. Learning how brain is involved in the genesis of normal and abnormal behavioral/emotional manifestation would result in better clinical judgment, lesser diagnostic errors and increase sensitivity to consider and rule out a neuropsyhological origin or biochemical mediation of the psychopathology. Also, current researches have indicated many pharmacological agents dramatically alter the severity and course of certain mental disorders, particularly the more severe disorders. Therefore, the aim of this paper is to provide important biological foundations of human behavior and various syndromes. The main focus is the nervous system and its command center – the brain.

Objectives: By the end of Part-I, trainees are required to demonstrate ability to:

- Describe the nature and basic functions of the nervous system.
- Explain what neurons are and how they process information.
- Identify the brain's levels and structures, and summarize the functions of its structures.
- Describe the biochemical aspects of brain and how genetics increase our understanding of behavior.
- State what endocrine system is and how it regulates internal environment and affects behavior.
- Discuss the principles of psychopharmacology and review the general role of neurotransmitters and neuromodulators in the brain.
- Describe the monoaminergic and cholinergic pathway in the brain and the drugs that affect these neurons.
- Describe the role of neurons that release amino acid neurotransmitters and the drugs that affect these neurons.
- Describe what kinds of clinical symptoms are often associated with lesions of frontal, parietal, temporal and occipital lobes of the brain.
- Describe what kinds of neuropsychological deficits are often associated with lesions of frontal, parietal, temporal and occipital lobes of the brain, and carry out the indicated neuropsychological assessment employing any valid battery of tests.
- Describe what kinds of neuropsychological deficits are often associated with subcortical lesions of the brain.
- List symptoms that are typical of focal and diffuse brain damage.
- Enumerate the characteristics of clinical syndrome and the nature of neuropsychological deficits seen in various cortical and sub-cortical dementias.
- Describe the neuropsychological profile of principal psychiatric syndromes.
- Demonstrate an understanding of functional neuro-imaging techniques and their application in psychological disorders and cognitive neuroscience.
- Demonstrate an understanding of the principles involved in neuropsychological assessment, its strengths and weaknesses, and its indications.
- Describe the nature of disability associated with head injury in the short and longer term, methods of remedial training and their strengths and weakness.

Academic Format of Modules: The learning would be primarily through clinical assessment of cases with brain lesions and disorders. Lectures, seminars and demonstrations by the experts in specific discipline, disease, topics such as by Anatomist, Biochemist, Physiologist, Psychiatrist, Neurologist and Neurosurgeons are required to impart knowledge and skills in certain domains. Depending on the resources available at the center these academic activity can be arranged.

Evaluation: Theory– involving long and short essays, practical/clinical exam in neuropsychological assessment with cases having a brain lesion/disorder and comprehensive viva.

Course Contents: Part-A (Anatomy, Physiology and Biochemistry of CNS)

Module – I: **Anatomy of the brain**
Major anatomical sub-divisions of the human brain; the surface anatomy and interior structures of cortical and subcortical regions; anatomical connectivity among the various regions; blood supply to brain and the CSF system; cytoarchitecture and modular organization in the brain.

Module – II: Structure and functions of cells
Cells of the nervous system (neurons, supporting cells, blood-brain barrier); communication within a neuron (membrane potential, action potential); communication between neurons (neurotransmitters, neuromodulators and hormones).

Module – III: Biochemistry of the brain
Biochemical and metabolic aspects of Brain; medical genetics; structure and function of chromosomes; molecular methods in genetics; genetic variation; population genetics; single-gene inheritance; cytogenetic abnormalities; multi-factorial inheritance; biochemistry of genetic diseases.

Module – IV: Neurobiology of sensory and motor systems
Organization of sensory system in terms of receptors, relay neurons, thalamus and cortical processing of different sensations; principle motor mechanisms of the periphery (muscle spindle), thalamus, basal ganglia, brain stem, cerebellum and cerebral cortex.

Module – V: Regulation of internal environment
Role of limbic, autonomic and the neuro-endocrine system in regulating the internal environment; reticular formation and other important neural substrates regulating the state of sleep/wakefulness

Module – VI: Neurobiology of behavior
Neurobiological aspects of drives, motivation, hunger, thirst, sex, emotions, learning and memory;

Module – VII: Psychopharmacology: Principles of psycho pharmacology (pharmacokinetics, drug effectiveness, effect of repeated administration); sites of drug action (effects on production, storage, release, receptors, reuptake and destruction); neurotransmitters and neuromodulators (acetylcholine, monoamines, amino acids, peptides, lipids).

Course Contents: Part-B (Neuropsychology)

Module - VIII: Introduction:
Relationship between structure and function of the brain; the rise of neuropsychology as a distinct discipline, logic of cerebral organization; localization and lateralization of functions; approaches and methodologies of clinical and cognitive neuro-psycholoigsts.

Module- IX: Frontal lobe syndrome
Disturbances of regulatory functions; attentional processes; emotions; memory and intellectual activity; language and motor functions

Module-X: Temporal lobe syndrome
Special senses – hearing, vestibular functions and integrative functions; disturbances in learning and memory functions; language, emotions, time perception and consciousness

Module – XI: Parietal and occipital lobe syndromes
Disturbances in sensory functions and body schema perception; agnosias and apraxias; disturbances in visual space perception; color perception; writing and reading ability

Module–XII: Neuropsychological profile of various neurological and psychiatric conditions: Huntington's disease,

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Parkinson's disease, progressive supranuclear palsy, thalamic degenerative disease, multiple sclerosis, cortical and subcortical dementias, Alzheimer's dementia, AIDS dementia complex etc., and principal psychiatric syndromes such as psychosis, mood disorders, suicide, anxiety disorders, and other emotional and behavioral syndromes.

Module – XIII: **Functional human brain mapping**
QEEG, EP & ERP, PET, SPECT, FMRI

Module – XIV: **Neuropsychological assessment**
Introduction, principles, relevance, scope and indications for neuropsychological assessment and issues involved in neuropsychological assessment of children.

Module – XV: Neuropsychological rehabilitation
Principles, objectives and methods of neuro-rehabilitation of traumatic brain injury and brain diseased; scope of computer-based retraining, neuro-feedback, cognitive aids etc.

Examination Scheme:

	Internal Assessment (30 Marks)				**Final Exam**	**Total Marks**
Components	CT	H/P/V/Q	CT	A		
Weightage	10	5	10	5	70	100

CT-Class Test; **H**-Home Assignment; **P**-Presentation; **V**-Viva; **Q**-Quiz; **A**-Attendance; **EE**-End Term Exam

PAPER-IV: PRACTICAL: PSYCHOLOGICAL THERAPIES INCLUDING VIVA-VOCE

Course Code: PSY5304 **Credit Units: 12**

Aim: Acquire and practice theoretical understanding, attitude and skills necessary to apply various psychotherapeutic interventions to mental health problems and to also develop skills and competency to intervene in stress associated with medical problems among patients as well as their care givers.

Objectives:

- Understanding the role of important client, counselor and context related factors in the psychotherapeutic process
- Systematic application of psychotherapeutic approaches in clinical conditions
- Carry out interventions considering relevant outcome research with ethical considerations
- Application and understanding of health psychology principles in various health conditions
- Working collaboratively with other health care professionals
- Appreciation of the role of social and cultural factors in intervention
- Learn strategies of raising and supporting mental health awareness

Core Topics for practical practice

1. Presenting a clear and precise account of client's problems and Skill of collaborative working
2. Developing appropriate treatment plans
3. Formulating realistic goals for intervention taking into consideration the social and contextual mediation
4. Using appropriate measures of quantifying therapeutic changes
5. Conducting specialized interventions
6. Identifying/making use of factors that help patients get better with psychotherapy
7. Skills in presenting and communicating aspects of current intervention work for assessment by other health professionals
8. Ability to link theory with practice assimilating clinical, professional, academic and ethical knowledge in their role of a therapist
9. Presenting a critical analysis of intervention related research articles and developing methods of replicating such research
10. Understanding, assimilating and integrating newer evidence based research findings in therapies, techniques and processes
11. Understanding psychosocial impact of an illness and relevant psychological interventions
12. Understanding the rationale of psychological interventions and their relative efficacy in various disorders
13. Understanding the importance of counselor-patient relationships in determining therapy outcomes
14. Application of health psychology principles in specific health problems
15. Sensitive handling of issues related to death and dying, breaking bad news and end of life concerns
16. Ability to carry out specialized interventions during periods of crisis, grief and bereavement
17. Understanding training aspects of psychotherapy and ethical/legal issues involved in therapy
18. Ability to conduct a well rounded interview in clinical settings
19. Developing interviewing and counseling micro skills
20. Understanding and application of behavior therapy approaches- classical conditioning based procedures, operant procedures, self control procedures, Biofeedback- in individual, group, family and marital counseling
21. Application of rational emotive behavior therapy, cognitive behavior therapy,

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

cognitive analytic therapy, dialectical behavior therapy, problem solving therapy, mindfulness based cognitive therapy and schema focused therapy

22. Understanding progressive muscular relaxation, autogenic training, biofeedback, eye-movement desensitization and reprocessing
23. Application of psychoanalytic therapies (Ana Freud, Melanie Klein, Donald Winnicott); special techniques (behavioral and play) for developmental, internalizing and externalizing disorders in children
24. Understanding and application of eclectic/integrative approaches for managing deliberate self harm, traumatic conditions, victims of disasters, chronic mental illnesses
25. Understanding of Yoga, meditation, Shavasana, Pranik Healing, Reiki, Tai Chi, etc.
26. Understanding of psycho-education for family members and care givers
27. Understanding psychosocial aspects of disabilities and extending various kinds of rehabilitation services
28. Understanding of stressors, resources and support systems specific to the Indian social context
29. Understanding of Indian psychological healing practices
30. Ability to review literature, appreciate theoretical/methodological issues involved, analyze data and interpret results in a scientifically meaningful ways

Note: A certificate by the head of the department that the candidate has attained the required competence in all of the above tests shall be necessary for appearing in the university examinations of Part-I & II.

Examination Scheme:

	Internal Exam (60)			**Final Exam (140)**		**Total Marks**

PAPER-V: SUBMISSION OF PSYCHOTHERAPY RECORDS

Course Code: PSY5305 **Credit Units: 12**

Course Contents:

Five fully worked-out Psychotherapy Records, out of which one should be child therapy record. The records should include a summary of the clinical history organized under relevant headings, and a discussion on

a) reasons for intervention(s),
b) areas to be focused including short- and long-term objectives,
c) type and technique of intervention employed and rationale
d) therapy processes,
e) changes in therapy or objectives, if any, and the reasons for the same,
f) outcome,
g) prevention strategies,
h) future plans

Examination Scheme:

Components	Submission of five fully worked-out Psychotherapy Records
Weightage (%)	100

PAPER-VI: DISSERTATION

Course Code: PSY5337 **Credit Units: 10**

Under the guidance of a Clinical Psychology faculty member with Ph.D. or minimum 2-yr experience (post-qualification) in clinical teaching or clinical research. If the research work is of interdisciplinary nature requiring input/supervision from another specialist, co guide(s) from the related discipline may be appointed as deem necessary.

GUIDELINES FOR DISSERTATION

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Selecting the Dissertation Topic

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of;
- information and to your own knowledge; of value and interest to you and your personal and professional development.

Planning the Dissertation

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

Dissertation format All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary.**
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

  Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

  For books, the following details are required: Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996
- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the Assessment of the Dissertation

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

While evaluating the dissertation, faculty guide will consider the following aspects:
Has the student made a clear statement of the objective or objective(s).
If there is more than one objective, do these constitute parts of a whole?
Has the student developed an appropriate analytical framework for addressing the problem at hand.
Is this based on up-to-date developments in the topic area?
Has the student collected information/data suitable to the frameworks?
Are the techniques employed by the student to analyse the data / information appropriate and relevant?
Has the student succeeded in drawing conclusion form the analysis?
Do the conclusions relate well to the objectives of the project?
Has the student been regular in his work?
Layout of the written report

Assessment Scheme:

Continuous Evaluation: (Based on Abstract, Regularity, Adherence to initial plan, Records etc.)	30%
Final Evaluation: Based on,	70%
Contents & Layout of the Report,	25
Conceptual Framework,	15
Objectives & Methodology and	15
Implications & Conclusions	15

Paper I: PSYCHOSOCIAL PERSPECTIVES OF MENTAL DISORDERS

Course Code: PCP3101 **Credit Units: 12**

Course Contents:

Module-I: Clinical Psychology & Mental Health: History of Clinical Psychology and its role in understanding and alleviation of mental illness, promotion of mental health and rehabilitation of the mentally ill, role and functions of Clinical Psychologists in DMHP, Professional code of conduct and ethical issues

Module-II: Epidemiology: Epidemiological surveys in Indian context; socio- cultural correlates of mental illness; psychological well-being and quality of life – measures and factors influencing.

Module-III: Models of Mental Disorders: Concept of normality and abnormality, causes of mental disorders – psychodynamic, behavioral, cognitive, humanistic and biological models

Module-IV: Family influences: Early deprivation and trauma; neglect and abuse; attachment; separation; inadequate parenting styles; marital discord and divorce; maladaptive peer relationships; communication style; family burden; expressed emotions and relapse

Module-V: Social Pathology: Discrimination, gender and ethnicity, social class, poverty and unemployment, social tension & violence, crime and delinquency, suicide, addictive behavior, social aggression with special reference to Indian context.

Module-VI: Psychopathology of specific conditions: Neurotic, Stress-related, Somatoform, Psychotic, Personality, Childhood and Adolescence Disorders.

Module-VII: Disability: Definition and classification of disability; psychosocial models of disability; impact, needs and problems; issues related to assessment/certification of disability – areas and measures.

Module-VIII: Rehabilitation: Approaches to rehabilitation; interventions in the rehabilitation processes; models of adaptation to disability; family and caregivers issues; rights of mentally ill; empowerment issues; support to recovery, policies and Acts.

Paper II : COUNSELING AND THERAPY

Course Code: PCP3102 **Credit Units: 12**

Course Contents:

Module-I: Introduction to Psychotherapy and Counseling: Definitions, Objectives, Models of counseling, Schools of Psychotherapy, Planning and recording of counseling and therapy sessions.

Module-II: Interviewing: Objectives of interviews, interviewing techniques, types of interview, characteristics of structured and unstructured interview, interviewing skills.

Module-III: Behavior Modification and Therapy: Introduction, Behavioral assessment, analysis and formulations (for Neuroses, Psychoses and other conditions), Relaxation techniques, social skills training, operant procedures, self control procedures and behavioral counseling.

Module-IV: Cognitive Therapies: Introduction to Cognitive Model, basic principles and assumptions, techniques based on Cognitive restricting and therapies.

Module-V: Crisis Intervention: Definition of Crisis, phases of Crisis, Techniques, and Stages of crisis work, Applications, supportive psychotherapy – goals, indications and techniques.

Module-VI: Group Therapy: Theoretical models, types of groups, stages of group therapy, process issues including role of the therapist, techniques, applications of group therapy.

Module-VII: Family Counseling/Therapy: Models for the assessment of families, common family problems and their intervention, goals and methods of family intervention, ethical issues in family counseling and therapy.

Module-VIII: Therapy with children and special conditions: Interventions for internalizing and externalizing Disorders, disorder of scholastic skills, deliberate self-harm, trauma and abuse, bereavement, school counseling, Parent and Family Counseling, chronic mental disorders.

Paper - III: PSYCHIATRY

Course Code: PCP3103 **Credit Units: 12**

Course Contents:

Module-I: Nomenclature: Introduction to classificatory systems currently in use and their limitations.

Module-II: Psychoses: Schizophrenia, affective (mood) disorders, delusional disorders and other forms of psychotic disorders – types, clinical features, etiology and management.

Module-III: Neurotic, Stress-related and Somatoform disorders: types, clinical features, etiology and management.

Module-IV: Disorders of personality and behavior: Specific Personality disorders, Mental & behavioral disorders due to psychoactive substance use, Habit and impulse disorders, Sexual disorders and dysfunctions.

Module-V: Organic mental disorders: types, clinical features, etiology and management.

Module-VI: Behavioral, emotional and developmental disorders of childhood and adolescence: types, clinical features, etiology and management.

Module-VII: Mental Retardation: Classification, etiology and management/ rehabilitation.

Module-VIII: Mental health policies and legislation: Mental Health Act of 1987, National Mental Health Program 1982, the persons with disabilities (equal opportunities, protection of rights and full participation) Act 1995; Rehabilitation Council of India (RCI) Act of 1993, National Trust for Mental Retardation, CP and Autistic Children 1999, Forensic issues related to mental disorders.

Practical – I: Psychological Assessment

Course Code: PCP3104 **Credit Units: 12**

Course Contents:

The candidates should be provided with abundant opportunities to acquire the necessary skill and competency in each of the following psychological tests. Since psychological assessment forms major part of Diploma level training, extensive exposure in working up of cases and carrying out the assessment shall be ensured.
The domains that should be emphasized include but not limited to: Case history method, mental status examinations, arriving at the clinical diagnosis, rationale of psychological testing, observations, response recording, analyze, interpret and communicate the findings to the team members.

Specific tests: Tests for attention, memory, intelligence, developmental skills, abstract ability, personality, diagnosis, rating scales, assessing disability, QOL and wellbeing, stress and adaptation (includes standardized vernacular version of tests/scales those used in adult and child conditions).

List of Core Tests:

- Binet-Kamat test
- Raven's tests of intelligence (all forms)
- Bhatia's battery of intelligence tests
- Malin's intelligence scale for children
- Wechsler adult performance intelligence scale
- Wechsler memory scale
- PGI memory scale
- 16-PF
- Eysenck's personality inventory/questionnaire
- Thematic apperception test
- Children apperception test
- Rorschach psychodiagnostics

A certificate by the Head of the Department that the candidate has attained the required competence in all of the above Core Tests shall be necessary for appearing in the final examination.

Syllabus

Paper I: DISABILITY AND REHABILITATION

Course Code: PRP3101 **Credit Units: 12**

Course Contents:

Module-I: Introduction – Overview of the profession, history and growth of rehabilitation field, areas of specialization, current issues and trends in different areas of rehabilitation, magnitude and incidence of disability, cost of disability, major national reports and surveys

Module-II: Concepts and theory – Impairment, disability and handicap, types and causes of impairments, realms of impairments, concept of functional capacity, coping and well-being, quality of life and its functional domains, content areas, methods of assessment, specific and global indicators of quality of life

Module-III: Disability and Rehabilitation – Models of disability and rehabilitation, enabling–disabling processes, impact of the physical, social and psychological environments on the enabling– disabling processes, effects of disability on participation, psychosocial theories of adjustment, strategies to enhance adjustment, functional limitations and strategies to reduce and accommodate limitations

Module-IV: Disability through life-cycle – Specific problems pertaining to each stage of life - childhood, adolescence, young adulthood, middle age, and older adulthood, and adapting strategies

Module-V: Ethics and policy issues – Rehabilitation ethics, rehabilitation policies and Acts (Persons with Disabilities Act, The National Trust Act, Mental Health Care Act, Rehabilitation Council of India Act, UNCRPD), assistance, concessions, social benefits and support from government, and voluntary organizations; contemporary challenges, civil rights and legislation, empowerment issues

Paper II: PSYCHOSOCIAL ISSUES IN DISABILITY

Course Code: PRP3102 **Credit Units: 12**

Course Contents:

Module-I: Stress and Coping Style – Stress due to disability, threat to life and physical well being, body image, independency, autonomy and control, self-concept, self esteem, life goals and future plan, invisible disabilities, marginalization, Denial, regression, compensation, rationalization, emotional reaction – grief, loss, guilt and fear, coping styles and strategies, stages of adaptation and adjustment, factors impeding adjustment to disability and disabling processes, psychological control

Module-II: Mental health issues – Psychopathological reactions such as anxiety, depression, adjustment problems, other co-existing mental morbidity, emotional and behavioral disorders in children and adolescents, problems related to marital and sexual life, abuse and exploitation, substance use, interventions for mental illnesses

Module-III: Family issues – Relationship issues with family, problems of families of disabled adults and children, impact of disability on family, family burden, needs of family and models of family adaptation, intervention to strengthening family support to disabled

Module-IV: Social issues – Societal attitudes toward disabilities, measurement of attitude and strategies for attitude change, social environment, social participation, social interaction, social network and support, disabling factors, prejudice, stigma, discrimination, marginalization, gender disparity

Module-V: Vocational issues - Career competency, career development issues, work related stress, economic independence, well-being, assistive devices for activities of daily living, mobility aids, at work place, sensory devices, environment modifications and universal designs, needed support system

Paper III: REHABILITATION ASSESSMENT AND COUNSELING

Course Code: PRP3103 **Credit Units: 12**

Course Contents:

Module-I: Assessment – Need for assessment in counseling, assessmentbased model for decision making, planning, and implementing individualized interventions, various instruments used for assessing cognitive, learning, behavioral, and emotional functioning, social and emotional development, assessment of perception of the problems and potential to participate and benefit from interventions, and assessing intervention efficacy

Module-II: Theory and concepts – Definition and goals of rehabilitation counseling, theories and techniques, counselor role, boundaries of confidentiality, ethical guidelines in counseling activities, concept of dual relationships, professional challenges in counseling and conflict resolutions, models, spiritual, culture and gender issues in counseling

Module-III: Intervention Approaches – Individual counseling approaches viz. non-directive, existential, humanistic, person-centered, cognitive and behavioral counseling, and behavior modification, techniques of remedial training for scholastic/learning problems

Module-IV: Specific Interventions – Specific intervention for developing social skills, academic skills, assertiveness, anger management, addressing anxiety/mood disorders, assessing family functioning, its strengths and resources, family counseling, crisis intervention

Module-V: Vocational counseling – Assessment and components of vocational counseling viz. identifying interests, goals and plans, and counseling during the training and job placement processes, scheme related to skill development

Paper IV: COMMUNITY BASED REHABILITATION

Course Code: PRP3104 **Credit Units: 12**

Course Contents:

Module-I: Goals and Objectives – Definition of CBR, Goals and objectives, key principles - equality, social justice, solidarity, integration and dignity

Module-II: Components – Creation of a positive attitude, provision of rehabilitation services, education and training opportunities, creation of micro and macro income generation opportunities, provision of long term care facilities, prevention of causes of disabilities and monitoring & evaluation

Module-III: Role of CBR professionals – As local advocates, liaison and continuity of care, continued supervision of home programs, community initiatives to remove barriers that affect exclusion, advocacy

Module-IV: Initiatives – Social counseling, training in mobility and daily living skills, community awareness raising, facilitating access to loans, vocational training, information for local self-help groups, contacts with different authorities, school enrolment

Module-V: Empowerment issues – Approaches for empowering - social mobilization, political participation, communication, self help groups and organization working for persons with disabilities

ASE2105	Introduction to Computers and Programming in C	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

CO 1:Define the purpose and structure of C Program for programming; identify and distinguish various data types and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.

CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs

CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language

CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.

CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module II: Programming in C History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7
Module III: Fundamental Features in C C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
Module IV: Arrays and Functions One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
Module V: Advanced features in C Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.Strings and C string library.Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

**Bloom's Level:*
L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6:Evaluation

ASE2110	Programming in C Lab	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

Course Objectives

The objective of this course is to

- Equip the students with concepts of Programming through C Language
- Provide an overview of advanced programming concepts like Structure, Union and File Handling.

Course Outcomes

After the completion of course, the students will be able to,

CO 1:Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

LABORATORY SESSSION 1 OPERATORS, EXPRESSIONS and DECISION MAKING 1. Write a program to calculate simple interest and amount. 2. Write a program to swap two numbers using third variable. 3. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order. 4. Write a program to check if the number is even or odd. 5. Write a program to perform arithmetic operations using Switch Case statement. 6. Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement.	L3	5
LABORATORY SESSSION 2 LOOPING 1. Write a program to find factorial of given no using do while statement. 2. Write a program to print prime numbers up to 'n'. 3. Write a program to sum of n natural no. 4. Write a program to print Fibonacci series. 5. Write a program to reverse a number. 6. Write a program to print the following pattern using for loop 1 2 2 3 3 3 4 4 4 4 7. Write a program to print the following pattern using for loop A A B A B C A B C D	L3	6
LABORATORY SESSSION 3 ARRAYS and FUNCTIONS 1. Write a program to read nnum of students and 5 subjects marks. 2. Write a program to swap two numbers using call by value. 3. Write a program to convert all lower case to uppercase characters 4. Write a program to find the factorial of a number using recursion. 5. Write a program to print the add/product of two matrices of any order.	L3	5
LABORATORY SESSSION 4 POINTERS AND STRING 1. Write a program to perform operations on strings using string handling in-built functions (concatenation, reversal, copy etc.) 2. Write a program to swap two numbers using call by reference. 3. Write a program to perform dynamic memory allocation and de-allocation. 4. Write a program to print elements of array using pointers. ASE2215	Workshop Technology	L	T	P	C
Version 1.1	Date of Approval: May, 2019	2	0	0	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

In this course the concepts of machine tool like Lathe, Shaper, Milling, and Drilling machines are discussed. Elementary concept of foundry, sheet metal and welding processes are discussed in detail. The aim of this course is to make the students familiar with the basic workshop processes.

Course Objectives

The objective of this course is to

- Equip the students with concept of machine tool, foundry, sheet metal and welding processes.
- Provide an overview of workshop technology.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define the manufacturing process and engineering materials.
CO2: Explain the foundry, sheet metal and welding processes.
CO3: Demonstrate the machine tools like Lathe, Shaper, Milling, Drilling machines.
CO4: Discuss the basic elements of metal cutting and cutting parameters.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction: Introduction to Manufacturing Processes and their Classification. Engineering Materials: General Properties and Applications of Engineering Materials, Plain carbon steel & classification.	L1, L2 and L3	3
MODULE 2: Foundry: Introduction to Casting Processes, Basic Steps in Casting Process, Pattern, Types of Patterns, Pattern Allowances, Moulding Sand and its composition, Sand Preparation, Molding Methods, Mould Assembly, Melting (Cupola) and Pouring, Fettling, Casting Defects and Remedies.	L1, L2 and L3	5
MODULE 3: Sheet Metal Work: Sheet Metal Operations, Measuring, Layout Marking, Shearing, Punching, Blanking, Piercing, Forming and Bending.	L1, L2 and L3	4
MODULE 4: Introduction to Machine Tools: Specifications and Uses of commonly used Machine Tools in a Workshop such as Lathe, Shaper, Milling, Drilling. Basic elements of metal cutting and cutting parameters.	L1, L2 and L3	6

ASE2212	ENGINEERING GRAPHICS LAB	L	T	P	C
Version 2019.1	Date of Approval: July 14, 2019	0	0	4	2
Pre-requisites/Exposure	Concepts Mathematics (especially Trigonometry and Geometry)				
Co-requisites	Machine Drawing & CAD				

Catalog Description:
A freshman level course which provides the undergraduate engineering students with a background in descriptive geometry, orthographic projection, engineering drawing standards and annotation, computer-aided engineering graphics. The concepts of point, line and plane relationships in projection, multi-view engineering drawings, auxiliary and section views, basic dimensioning and annotation, engineering applications of drawings are also discussed.

Course Objective:
The objective of this course is to

- Equip the students with the in-depth knowledge of drawings of points, straight line, planes, cylinders, prisms, pyramids, parabola, ellipse etc.
- Draw different figures manually and will be capable of using various instruments involved in drawings.

Course Outcomes (COs):
At the end of the course, the student shall be able to:
CO 1 - Define and explain basic principles of projections of points and lines.
CO 2 - Define, describe and construct the different orientations and projections of planes.
CO 3 – Explain and construct the projections of solids and sectioning of solids in different orientations.
CO 4 - State and draw the concepts of development of surfaces and introduction to auto CAD.
CO 5 – Define and construct orthographic and isometric view of an object.

Modules	Blooms level*	Number of hours
Module I: Introduction Importance, significance and scope of engineering drawing, drawing instruments and their use, lettering, dimensioning, scales, sense of proportioning, different types of projections, B.I.S. Specifications.	L1 and L2	8
Module II: Projection of points, lines and plane surface Principal planes, principles of orthographic projections, Projection of points in all quadrants, Projection methods - First angle & third angle projection, Projections of straight lines (first angle projection) inclined to both the planes, true lengths and traces, projection of planes, projection of planes in simple position and inclined to both the principal planes, auxiliary planes and views	L1, L2 and L3	12

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module III: Projection of solids & section of solids Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both of the principal planes, Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other, obtaining true shape of section	L1, L2 and L3	12
Module IV: Development of surfaces & Isometric projections Development of surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones, Principles of isometric projection, isometric scale, Isometric projections of simple solids and truncated solids, Prisms, pyramids, cylinders, cones, Conversion of Orthographic Views to Isometric Views and Vice-versa.	L1, L2 and L3	8
Module V: Introduction to CAD Introduction to CAD and use of its commands, practice of some 2D figures using CAD.	L1, L2 and L3	8

**Bloom's Level:*
L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Examination Scheme:

ENGINEERING MECHANICS LAB

Course Code: ASE2218 **Credit Units: 01**

Engineering Mechanics:

1. To verify the law of Force Polygon
2. To verify the law of Moments using Parallel Force apparatus. (Simply supported type)
3. To determine the co-efficient of friction between wood and various surface (like
4. Leather, Wood, Aluminum) on an inclined plane.
5. To find the forces in the members of Jib Crane.
6. To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
7. To determine the mechanical advantage, Velocity ratio and Mechanical efficiency of the
8. Wheel and Axle
9. To determine the MA, VR, η of Worm Wheel (2-start)
10. Verification of force transmitted by members of given truss.
11. To verify the law of moments using Bell crank lever
12. To find CG and moment of Inertia of an irregular body using Computation method

ASE2315	Strength of Materials	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Physics, Engineering Mechanics				
Co-requisites					

Course Catalog

The objective of this course is to make the students understand the concept of stress and strain in different types of structure/machine under different loading conditions. The course also covers the simple and compound stresses due to forces, stresses and deflection in beams due to bending, torsion in circular section, strain energy, different theories of failure and stress in thin cylinder thick cylinder and spheres due to external and internal pressure.

Course Objectives

The objective of this course is to

- Equip the students with concept of stress and strain induced in material under various loading conditions.
- Provide an overview of stresses induced in beam, shaft, column and deflection of beam under various loading conditions.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify, explain, and apply the principles of stress and strain and relationship between elastic constant to solve complex engineering problems.

CO2. Identify, explain, and apply the principles of shear force and bending moment under various loads to solve complex engineering problems.

CO3. Identify, explain, and apply the principles of torsion and torsional stresses to solve complex engineering problems.

CO4. Identify, explain, and apply the methods to solve complex engineering problems related to columns and struts.

CO5. Identify, explain, and apply the methods to solve complex engineering problems related to slope and deflection of different bodies.

Course Content

Modules	Blooms level*	Number of hours
Module I: Simple Stresses and Strains Concept of stress and strain; Hooke's law, Young's modulus, Poisson ratio, stress at a point, stress and strains in bars subjected to axial loading. Modulus of elasticity, stress produced in compound bars subject to axial loading. Mohr Circle, problems.	L1, L2, L3	6
Module II: Shear Force and Bending Moment Definitions, Types of loads, Types of beams, Shear force and bending moment diagrams for cantilevers, simply supported beams, calculation of maximum bending moment & shear force. Bending Stress, assumptions in the simple bending theory, derivation of formula and its application to beams of rectangular, circular and channel sections, problems.	L1, L2, L3	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module III: Torsion Derivation of torsion equation and its assumptions. Applications of the equation for the hollow and solid circular shafts, torsional rigidity, combined torsion and bending of circular shafts, principal stress and maximum shear stresses under combined loading of bending and torsion, problems.	L1, L2, L3	7
Module IV: Columns and Struts Columns and Struts and their failure mechanism, Euler's formulas; Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications, problems.	L1, L2, L3	7
Module IV: Slope and Deflection Relationship between moment, slope and deflection, Mohr's theorem; Moment area method; method of integration; Macaulay's method: Use of all these methods to calculate slope and deflection for the following: a) Cantilevers b) Simply supported beams with or without overhang c) Under concentrated loads, uniformly distributed loads or combination of concentrated and uniformly distributed loads, problems.	L1, L2, L3	8

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2317	Strength of Materials Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Physics, Engineering Mechanics				
Co-requisites	Strength of Materials				

Course Catalog

The objective of the Strength of Materials lab is to demonstrate the basic principles in the area of strength and mechanics of materials and structural analysis to the undergraduate students through a series of experiments. In this lab, the experiments are performed to measure the properties of the materials such as impact strength, tensile strength, compressive strength, hardness, ductility etc.

Course Outcomes

At the end of the course, the student shall be able to:

- **CO1.** Identify, explain, and demonstrate the procedure to conduct hardness tests using differenttesting techniques.
- **CO2.** Identify, explain, and demonstrate the procedure to conduct compression and stiffness testsusing different testing techniques.
- **CO3.** Identify, explain, and demonstrate the procedure to conduct impact and tensile tests usingdifferent testing techniques.
- **CO4.** Identify, explain, and demonstrate the procedure to conduct torsion tests and draw shearforce and bending moment diagrams for bodies under different loading conditions.

Modules	Blooms level*	Number of hours
1. To study the Brinell hardness testing machine & perform the Brinell hardness test.	L1, L2, L3	2
2. To study the Rockwell hardness testing machine & perform the Rockwell hardness test.	L1, L2, L3	2
3. To study the Spring Compression Testing machine and perform the Spring Stiffness test.	L1, L2, L3	2
4. To study the Impact testing machine and perform the Impact tests (Izod&Charpy Test)	L1, L2, L3	2
5. To study the Universal Testing Machine and perform the tensile test on Universal Testing Machine.	L1, L2, L3	2
6. To perform compression & bending tests on UTM.	L1, L2, L3	2
7. To study the torsion testing machine and perform the torsion test.	L1, L2, L3	2
8. To draw shear Force, Bending Moment Diagrams for a simply Supported Beam under Point and Distributed Loads.	L1, L2, L3	2

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2322	Fluid Mechanics and Dynamics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basic Physics				
Co-requisites					

Course Catalog

This course provides the basic knowledge and understanding of the properties, types, motion and forces of fluid. A student is supposed to have a basic knowledge of physics to comprehend the contents of this course. The subject will further enhance the knowledge regarding different types of flows and their practical applications in the field of aerospace. The course also includes different fluid equations like Euler's, Bernoulli's etc. and their practical applications.

Course Objectives

The objective of this course is to

- Provide introductory knowledge to the students about different properties of fluids and equip the students with the knowledge of basic principles and laws governing the motion of fluid.
- Equip the students with knowledge and understanding of the different behaviors of flow past submerged bodies of different shapes and cross-sections.

Course Outcomes

On successful completion of this course, students will be able to

CO1. Identify, describe, and distinguish amongst the various types and properties of fluids, hydrostatic forces and their measurement techniques.

CO2. Identify, describe, and distinguish amongst the various properties of Kinematics of fluid motion and solve relevant engineering problems.

CO3. Identify, describe, and distinguish amongst the various properties of Dynamics of fluid motion and solve relevant engineering problems using various techniques of dimensional analysis.

CO4. Define, and explain various forces and moments acting on fully submerged bodies and apply the basic principles to solve relevant engineering problems.

CO5. Identify, describe, and distinguish between various properties of internal and external laminar and turbulent flows and solve relevant engineering problems.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Fluid Properties and Fluid Static Physical properties of fluids, Newtonian and Non-Newtonian Fluids, Incompressible and compressible fluids. Pascal's Law, Hydrostatic law, concept of pressure and its measurement, forces on plane and curved surfaces. Buoyancy, stability of floating bodies.	L1, L2	7
Module 2: Fluid Kinematics Description of fluid flow; Lagrangian and Eulerian approach, Types of fluid flows, streamline, pathline and streakline, velocity potential and stream function. Source, sink, doublet, superimposed flow, vorticity and circulation, vortex flow, free and forced vortex.	L1, L2	8

Prof. (Dr.) Anil Kumar

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module 3: Fluid Dynamics and Dimensional Analysis Conservation equations, Euler's equation, Bernoulli's equation, Introduction to Navier-stokes equation, Pilot tube, Venturimeter, orificemeter, notches. Buckingham π-Theorem, Rayleigh Theorem, Types of similarity, Dimensionless numbers and their significance.	L1, L2, L3	7
Module 4: Flow past Submerged Bodies Drag and Lift, Types of drag force, Drag on various bodies, circulation and lift on cylinder and airfoil, Magnus Effect, Introduction to boundary layer, Boundary layer thickness, boundary layer separation.	L1, L2, L3	7
Module 5: Laminar and Turbulent Flow Reynolds' experiment, critical velocity, steady laminar flow through a circular tube, flow between parallel plates, Transition from laminar to turbulent flow, velocity distribution law near a solid boundary. Flow through pipes, Energy losses, minor losses in pipe lines.	L1, L2, L3	7

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2323	Fluid Mechanics and Dynamics Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Basic Physics				
Co-requisites	Fluid Mechanics and Dynamics				

Course Catalog

The objective of the Fluid Mechanics and Dynamics lab is to familiarize the students with application of basic physics of fluids, its viscosity, and its laws of conservation of energy. It provides the students with the knowledge of laboratory methods and interpretation of results with regard to fluid engineering applications such as design and operation of water, losses it goes through while energy is being transferred.

Course Objectives

- Equip the students with concepts of properties of fluid flow and fluids; energy losses calculations and its measurement through different geometric cross sections.
- Provide an outline of calculations of coefficient of discharge velocity and contraction through various flow measuring devices.

Course Outcomes

At the end of the course, the student shall be able to:

CO1. Describe the working, interpret, calculate, and validate the Bernoulli's experiment.
CO2. Describe the working of Venturimeter and Orificemeter, determine the coefficient of discharge.
CO3. Describe, categorize, differentiate the various major and minor losses, and calculate the losses in the pipeline structure.
CO4. Describe the Reynolds's experiment and metacenter. Determine the type of the flow and interpret the conditions for a body to float.
CO5. State the pressure measuring devices, their working and determine the viscosity of fluid with change in the temperature.

Modules	Blooms level*	Number of hours
1. Verification of Bernoulli's Theorem	L2, L4	1
2. To determine the coefficient of discharge of Venturimeter	L2, L3	2
3. To determination of coefficient of Discharge C_d, coefficient of contraction C_c and coefficient of velocity C_v of an Orificemeter	L2, L3	1
4. To find major head losses in a pipe line	L2, L3 and L4	1
5. To find minor head losses in a pipe line (sudden expansion/contraction/bend)	L2, L3 and L4	1
6. To find critical Reynold's number for a pipe flow	L2, L3	1
7. To determine the metacentric height of a floating body	L2, L3	1
8. To study pressure measuring devices	L1, L2	1
9. To determine the viscosity of the fluid with the change in the temperature	L1, L2	1
10. To determine the coefficient of discharge by falling head method	L2, L3	1

ASE2324	Aircraft Manufacturing Processes	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Basic Physics, Chemistry, Engineering Mechanics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various tools, techniques, processes, and practices utilized in manufacturing and maintenance workshops. This course also deals with various specific processes utilized in manufacturing of aircraft structure and components. Basic understanding of engineering physics and elements of mechanical engineering is prerequisite to comprehend the contents of this course.

Course Objectives

The objective of this course is to

- Provide introductory knowledge to the students regarding the basic manufacturing processes, and heat treatment techniques.
- Equip the students with knowledge of various tools, processes, and techniques used in manufacturing of aircraft and its components.

Course Outcomes

On successful completion of this course, students will be able to

CO1. Identify, describe and distinguish amongst the basic tools and processes used in sheet metal and wood working.

CO2. Identify, describe, and distinguish between various heat treatment processes and their impacts on material properties.

CO3. Identify, describe, and distinguish between various types of machining tool used in manufacturing and fabrication of components.

CO4. Identify, describe, and distinguish between various types of jigs and fixtures used in manufacturing and fabrication of aircraft components.

CO5. Identify, describe, and distinguish between various processes and techniques used in manufacturing and fabrication of aircraft structure and components.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Selection of materials. Importance of material processes. Manufacturing Processes. Sheet Metal working. Wood Working.	L1, L2	4
Module 2: Heat Treatment of Steels Relation between heat treatment and physical properties of steels. Critical temperatures, annealing, normalizing, tempering, case carburizing, hardening, nitriding and other surface hardening methods. Quenching. Hardness numbers, hardness testing machines.	L1, L2	6
Module 3: Machining Tools Types of lathe, lathe operations – facing, turning, threading, shapers. Types of shapers, general applications. Milling machines, types of milling machines. Work holding devices, cutter holding devices. Abrasives, bonds, grinding wheels.	L1, L2	5

ASE2412	Numerical Analysis and Programming	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Basic Mathematics				
Co-requisites					

Course Catalog

This course deals with the techniques of numerical analysis, which gives the solution to applied problem when ordinary analytical method fails. The given techniques can be used in design of engineering and scientific problems. This course provides the basic knowledge and fundamentals related to the concepts of engineering mathematics, errors and approximation theory, interpolation, graph fitting and statistical computation.

Course Objectives

The objective of this course is to

- Provide an understanding to the students about the various numerical tools to solve problems related to formulation of algebraic equations and data interpolation.
- Equip the students with knowledge to use various numerical tools to solve problems related to calculus, differential equations, and statistics.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify, distinguish and apply the concept of errors, data interpretation and approximation theory to solve relevant problems.

CO2. Identify, distinguish the various methods of Interpolation, and apply the concept to solve realistic problems.

CO3. Distinguish and apply the various methods of numerical integration and differentiation to solve complex engineering problems.

CO4. Interpret and construct differential equations various different methods to solve complex engineering problems.

CO5. Identify, distinguish and apply various technical tools of curve fitting and their utilisation in engineering.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Solution of Algebraic and Transcendental Equation Error in a series approximation, Bisection Method, Iteration method, Method of false position, Newton-Raphson method. Solutions of Simultaneous equation: Gauss elimination method, Jacobi iteration method, Gauss Seidal method.	L1, L2, L3	10
Module 2: Interpolation Finite Differences, Difference tables, Polynomial Interpolation**:** Newton's forward and backward formula, Central Difference Formulae: Gauss forward and backward formula. Interpolation with unequal intervals: Lagrange's Interpolation, Newton Divided difference formula.	L1, L2, L3	10
Module 3: Numerical Integration and Differentiation Introduction, Numerical differentiation Numerical Integration: Trapezoidal rule, Simpson's 1/3 and 3/8 rules.	L2, L3	5
Module 4: Solution of Differential Equations Euler's Method, Runga-Kutta Methods	L2, L3, L4	3

ASE2416	Aircraft Propulsion	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basic Physics, Introduction to Aerospace Engineering, Engineering Thermodynamics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of aerospace propulsive devices as systems, with functional requirements and environmental considerations. This course provides intermediate knowledge to the students about the design, construction, and working of different types of propulsion systems and of their components and sub-systems. Knowledge of basic physics, thermodynamics, and components of flight vehicle's power plant is crucial to comprehend the contents of this course. This course serves as a prerequisite for better understanding of advanced courses related to propulsion of flight vehicles.

Course Objectives

The objective of this course is to

1. Equip the students with basic knowledge and governing principles of jet propulsion, propulsion systems, and their components.
2. Enable students with problem solving skills related to design, construction, and performance of aircraft powerplants, their systems, and subsystems.

Course Outcomes

On successful completion of this course, students will be able to

CO1. Identify and explain the basic science and principles of jet propulsion and relevant performance parameters.

CO2. Identify, describe and compare amongst the various types of propellers and explain the mathematical theories behind the operation of propellers.

CO3. List, summarize and compare amongst the construction, components, and operation of various types of air-breathing engines, their systems, and subsystems and solve relevant problems.

CO4. List, summarize, and compare amongst the construction, components, and operation of various types of aircraft piston engines, their systems and subsystems.

CO5. Outline and describe different types of fuels, their characteristics, and environmental consideration associated with their use.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Basics of Jet propulsion. Classification of powerplants. Propulsive efficiency, Specific fuel consumption, Thrust and power. Factors affecting thrust and power.	L1, L2	7
Module 2: Propeller Blade Theory Ideal momentum theory and blade element theory. Selection of propellers, Types of propellers, Prop-fan, Shrouded propellers. Propeller power losses, Propeller performance parameters. Windmilling Effect.	L1, L2, L4	7

Prof. (Dr.) Anil Kumar

Module 3: Air-breathing Engines Gas turbine cycle. Compressor and turbine efficiencies. Compressor work and turbine work. Centrifugal and axial type of compressor and their comparative action. Combustion chambers, various arrangements and performance. Nozzles and their operation, afterburners.	L1, L2, L3, L4	6
Module 4: Aircraft Piston Engines S.I. and C.I. engines, 4-stroke and 2-stroke engines. Various type of arrangements, multi-cylinder engines, their merits and operational efficiencies. Intake and exhaust manifolds. Cooling and lubrication systems. Valve timing and arrangements. Combustion knock, knock rating. Carburetion and fuel injection. Ignition of the charge, ignition system. I.H.P., B.H.P and F.H.P, engine performance, effect of altitude, power required and power available. Supercharging and turbocharging	L1, L2, L4	10
Module 5: Aviation Fuel and Environmental Considerations Liquid fuels, hydrocarbons, gasoline, aviation turbine fuels. Fuel characteristics, vapor lock. Aircraft emission standards, environmental implications.	L1, L2	6

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2417	Aerospace Structures-I	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Engineering Mechanics, Strength of Materials				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of loads acting on aircraft structural members and their importance. This course provides knowledge and understanding to the students about the analysis of stress, strain, deflection, and torsion of a structure under varying loads using numerous methods. Knowledge of engineering mechanics and strength of materials is crucial to comprehend the contents of this course. This course serves as a prerequisite for better understanding of advanced courses related to structure of flight vehicles.

Course Objectives

The objective of this course is to

- Provide an overview of structural problems of beams and trusses which serves as benchmarks in analysis of structural members of flight vehicles.
- Enable the students to understand and utilized different theorems and principles governing the structural designing of flight vehicles.

Course Outcomes

On completion of this course, the students will be able to

CO6. Identify, describe, and analyze structural problems of stress and strain in Cartesian and Polar coordinates using governing equations.

CO7. Describe and determine the deflection and rotation of beams under different loads using various theorems.

CO8. Identify, describe, and determine the forces acting on statically indeterminate structures under different loads using various theorems.

CO9. Describe and apply the fundamental knowledge of torsion to solve relevant problems about solid bars, shells, and tubes.

CO10. Identify, describe and compare amongst various loads acting on structure members of an aircraft.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Analysis of 2D Problems Plane Stress and Plane Strain. Equilibrium equations, compatibility conditions, governing equations and boundary conditions. Analysis of 2D problems, Theory of Elasticity.	L1, L2, L4	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

ASE2419	Low Speed Aerodynamics Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Fluid Mechanics and Dynamics				
Co-requisites	Low Speed Aerodynamics				

Course Catalog

The objective of this course is to provide practical knowledge and understanding to the students about the aerodynamics over bodies of different cross-sections and shapes. Knowledge of fluid mechanics and basic aerodynamics is necessary to comprehend the contents of this course. This course equip the students with necessary knowledge to design and carry out experiments, gather results and interpret them in order to observe the aerodynamic behavior of bodies.

Course Objectives

The objective of this course is to

1. Equip the students with necessary practical understanding and skill to carry out experiments to visualize and observe the flow behavior over different bodies.
2. Provide practical skill and knowledge to carry out experiments using wind tunnel to gather results as per designed experiment.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain and demonstrate the construction and procedure of operating a wind tunnel and measurement of pressure gradient along a wind tunnel.

CO2. Explain and demonstrate the procedure of utilizing Pitot - static tube and anemometer for flow velocity calculations.

CO3. Explain and demonstrate the procedure of determining pressure distribution over bodies of different cross-sections.

CO4. Explain and demonstrate the procedure of utilizing Hele-shaw apparatus for flow visualization over bodies of different cross-sections.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: Wind tunnel as a tool, their classification, uses and applications.	L1, L2	2
Experiment 2: Measurement of pressure gradient along a wind tunnel	L1, L2	2
Experiment 3: Use of Pitot - static tube and Anemometer for measuring velocity	L1, L2	2
Experiment 4: Pressure distribution over a 2D cylinder	L1, L2	2
Experiment 5: Pressure distribution over an airfoil	L1, L2	2
Experiment 6: Flow visualization over flat plate	L1, L2	2
Experiment 6: Flow visualization over cylinder	L1, L2	2
Experiment 7: Flow visualization over an airfoil	L1, L2	2

Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Introduction to Aerospace Engineering				
Co-requisites	Aircraft Propulsion				

Course Description

The objective of this course is to provide practical knowledge and understanding to the students about the various propulsion systems and subsystems used in aerospace applications. Knowledge of fluid mechanics, thermodynamics, and heat transfer is necessary to comprehend the contents of this course. This course equips the students with necessary knowledge to understand the construction and operation of propulsion systems.

Course Objectives

The objective of this course is to

1. Provide practical knowledge to the students about the various types of piston engine, their construction, and operation.
2. Provide practical knowledge to the students about the various subsystems of SI and CI engines, their construction, and operation.

Course Outcomes

On completion of this course, the students will be able to

CO1. List, explain, and differentiate amongst the various types of piston engines based on their construction and operation.

CO2. Explain and demonstrate the construction and operation of various subsystems of piston engines.

CO3. Explain and demonstrate the knowledge of determining different kinds of powers in a piston engine.

CO4. Determine and analyze the performance of nozzle and duct burner.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: To study the construction and working of CI and SI engines having various arrangements of cylinders.	L2, L3	1
Experiment 2: To study the construction and working of two-stroke and four-stroke piston engines.	L2, L3	1
Experiment 3: To study the construction and working of a carburettor.	L2, L3	1
Experiment 4: To study the components and working of the fuel system of petrol and diesel engine.	L2, L3	1
Experiment 5: To study the components and working of the ignition system of the petrol engine.	L2, L3	1
Experiment 6: To determine the valve timings for a given piston-cylinder arrangement.	L2, L3	1
Experiment 7: To determine the IHP, BHP, and FHP of a four-stroke petrol engine.	L2, L3, L4	2

ASE2421	NUMERICAL ANALYSIS AND PROGRAMMING LAB USING MATLAB	L	T	P	C
Version		0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description:
The purpose of this course is to provide students with the skill, knowledge and attitude required to determine approximate numerical solutions to mathematical problems which cannot always be solved by conventional analytical technique, and to demonstrate the importance of selecting the right numerical technique for a particular application, and carefully analyzing and interpreting the results obtained.

Course Objectives:

1. Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.
2. Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, and the solution of differential equations.

Course Outcomes:
On completion of this course, the students will be able to
CO1: Define and describe the Algebraic and Transcendental Equation and solve the problems using appropriate Numerical methods.
CO2: Describing the interpolation methods to find intermediate values in given graphical or tabulated data.
CO3: Describe and apply Trapezoidal and Simpson's Rule to solve given integration problems.
CO4: Define and describe Runga-Kutta method and Euler's Method to solve differential equations.
CO5: Explain and describe the Statistical Computation using frequency charts, methods of least square etc.

Modules	Blooms level*	Number of hours
1. Solving Problems using Newton-Raphson Method in C Programming	L1,L2,L3	2
2. Solving Problems using Secant Method in C Programming	L1,L2,L3	2
3. Solving Problems using Bisection Method in C Programming	L1,L2,L3	1
4. Solving Problems using Regula Falsi Method in C Programming	L1,L2,L3	1
5. Solving Problems using Trapezoidal Rule in C Programming	L1,L2,L3	1
6. Solving Problems using Simpson's 1/3rd Rule in C Programming	L1,L2,L3	1
7. Solving Problems using Simpson's 3/8th Rule in C Programming	L1,L2,L3	1

ASE2422	Fuels and Combustion	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Chemistry				
Co-requisites	Aircraft Propulsion				

Course Description

This course provides basic understanding to the students about various types of fuels used in aviation application along with an insight to their physical and chemical parameters. This course also deals with various combustion mechanisms of fuels and enable the students in understanding the need and techniques of flame stability and fuel treatment. Basic knowledge of engineering chemistry and thermodynamics is a prerequisite to comprehend the contents of this course.

Course Objectives

The objective of this course is to

1. Provide a basic understanding to the students about the various aviation fuels and their properties.
2. Equip the students with knowledge about combustion fundamentals and performance.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify, explain, and compare amongst the various properties of fuels.
CO2. Identify, explain, and compare amongst the various types of alternative fuels used in aviation applications.
CO3. Explain, describe, and compare amongst the various fundamentals of combustion and flames.
CO4. Identify, explain and compare amongst the various fundamentals and techniques related to flame stabilization.
CO5. List, explain, and compare amongst the various methods and processes of fuel treatments.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Fuel and its Properties. Fuels, types of fuels, relative density, molecular mass, vapor pressure, flash point, volatility point, viscosity, surface tension, freezing point, specific heat, latent heat, thermal conductivity. Combustion properties of fuels. Calorific value, enthalpy, spontaneous-ignition temperature, limits of flammability, smoke point. Pressure and temperature effects.	L1, L2	7
Module 2: Alternative Fuels for Aerospace Applications Alternative fuels, synthetic fuels, biofuels, biodiesels, alternative fuel properties. Combustion and emissions performance. Fuel preparation, fuel atomization.	L1, L2	7
Module 3: Fundamentals of Combustion Deflagration, detonation, classification of flames, physics of combustion chemistry. Flammability limits, weak mixtures, rich mixtures. Laminar and turbulent flames, Premixed and diffusion flames, flame burning velocity. Factors influencing flame propagation speed. Stoichiometric ratio, equivalence ratio. Flame propagation in heterogeneous mixtures of fuel drops, fuel vapor, and air.	L2, L4	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module 4: Flame Stabilization Flame stability, definition of stability performance, measurement of stability performance. Bluff-body flame holders, stabilization. Mechanisms of flame stabilization, flame stabilization in combustion chambers.	L1, L2	7
Module 5: Fuel Treatment Introduction to fuel treatment, removal of sulfur compounds, contaminants, asphaltenes, gum, sediment, ash, water, sodium, vanadium, additives, gum prevention, corrosion inhibition/lubricity improvers, anti-icing, antismoke. Environmental considerations.	L1, L2	7

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2423	Control Systems	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basics of Electrical and Electronics Engineering				
Co-requisites					

Course Description

This course provides basic understanding and knowledge to the students about various control systems and their utilization in aerospace applications. Basic knowledge of electronics is a prerequisite to comprehend the contents of this course. This course also deals with analysis and design of control systems and enables the students in understanding the application of control systems in automatic flying control of flight vehicles.

Course Objectives

The objective of this course is to

1. Provide a basic understanding to the students about the control systems and their applications.
2. Equip the students with knowledge about operation, design, and analysis of control systems.

Course Outcomes

On completion of this course, the students will be able to

- **CO1.** Identify, explain, and categorize amongst the various types of control systems used in flight vehicle operation and control.
- **CO2.** Explain, describe, and compare amongst the various types of open and closed loop control systems, illustrate block diagrams and signal flow graphs.
- **CO3.** Explain and analyze the operation of transient and steady-state response control systems.
- **CO4.** List, explain, design, and analyze different types of controllers using various approaches.
- **CO5.** Describe, distinguish, and compare amongst the different types of control systems utilized in Automatic flying control systems of aircrafts.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Control Systems History of Automatic Control. Control Engineering Practice. Simple pneumatic, hydraulic, and thermal systems. Parallel and series systems. Analogies-mechanical and electrical components. Development of flight control systems.	L1, L2, L4	7
Module 2: Open and Closed Loop Systems Concept of controls. Open-loop and closed-loop systems with examples. Concepts of feedback and basic structure of feedback control system. Laplace's transform. Block diagram, representation of block diagram, reduction block diagram. Output to input ratios, signal flow graph. Requirements of an ideal control system.	L2, L3, L4	7
Module 3: Transient and Steady-State Response Analysis Introduction. Type and order of systems, time response specifications. Transient, and steady state response. Input signals. First order system with unit step response, Second order system with unit step response for un-damped, critical damped, overdamped, and underdamped cases. Higher order system. Routh's – Hurwitz Criterion. Steady and transient state errors in unit feedback control systems.	L2, L4	8

ASE2424	Mechatronics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basics of Electrical and Electronics Engineering				
Co-requisites					

Course Description

This course represents the design of computer-controlled electromechanical system. Basic knowledge of electronics and measurements systems is a prerequisite to comprehend the contents of this course. This course enables the student to design and operate a mechatronics system after integrating the principles of mechanical, computer, electrical, and controls engineering.

Course Objectives

The objective of this course is to

1. Provide brief introduction of various components of mechatronics systems comprising electrical, mechanical and control systems along with basic knowledge of mathematical models and theories.
2. Equip the students with knowledge about different types of sensors, actuation systems and microprocessors and their applications.

Course Outcomes

On completion of this course, the students will be able to

- **CO1.** List, explain, and describe different types of mechatronics systems, their components and working.
- **CO2.** Describe and represent mathematical models and blocks of mechatronic systems with various system theories.
- **CO3.** Identify, describe and select appropriate sensors and transducers and design an instrumentation system for collecting information about processes.
- **CO4.** Describe and distinguish between Pneumatic and hydraulic actuation systems, their design and operation.
- **CO5.** Identify, describe, and design the architecture and the instruction set for a microprocessor and its language programming with various types of digital and analog interfaces.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Introduction to mechatronics systems. Mechatronics in manufacturing, products, and design. Mechatronics system components. Measurement systems, control systems, electrical systems, mechanical systems.	L1, L2	6
Module 2: System Models Mathematical models. Mechanical system building blocks. Modeling dynamic systems. First order systems, second order systems.	L2, L4	6
Module 3: Transducers and Sensors Definition and classification of transducers and sensors. Principle of working and applications of light sensors, proximity sensors and Hall effect sensors. Signal conditioning, introduction to signal conditioning. Operational amplifier, protection, filtering, Wheatstone bridge. Digital signals multiplexers. Data acquisition.	L1, L2, L3	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module 4: Actuation Systems Introduction. Need and necessity of actuation systems. Pneumatic and hydraulic actuation systems, system components, graphic representations, symbols. Directional control valves, pressure control valves, process control valves. Hydraulic power packs, pumps. Design of hydraulic circuits.	L2, L3	8
Module 5: Introduction to Microprocessors Evolution of Microprocessor. Organization of Microprocessors (Preliminary concepts). Basic concepts of programming of microprocessors. Review of concepts - Boolean algebra, logic gates and gate networks, binary & decimal number systems, memory representation. Conversion of real, numbers, floating point notation, representation of floating point numbers, accuracy and range, overflow and underflow, addition of floating point numbers, character representation.	L1, L2, L3	8

ASE2510	Turbomachinery	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Engineering Thermodynamics, Aircraft Propulsion				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of shaft power and aircraft engines components such as inlet compressor, combustion chamber and nozzles. This course focuses on educating the students about various physical laws and mathematical theories that define the flow behavior, efficiencies and losses, i.e., performance characteristics of the components based on thermodynamics and aerodynamics. Knowledge of basic physics and fluid mechanics is crucial to comprehend the contents of this course. This course serves as a prerequisite for designing of engine components.

Course Objectives

The objective of this course is to

1. Provide knowledge about the basic principles and parameters of gas turbine/Turbomachinery.
2. Educate the students about the theories and laws governing the aerodynamic and thermodynamics analysis of turbomachinery.

Course Outcomes

On completion of this course, the students will be able to

CO6. Identify and explain various configurations of shaft power and aircraft engines.

CO7. Describe and analyze various components of centrifugal compressor and also describe its performance characteristics.

CO8. Describe and analyze various components of axial flow compressor and also describe its performance characteristics.

CO9. Describe and analyze various components of axial flow turbines and also describe its performance characteristics.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Open-cycle single shaft and twin shaft arrangements, Multi spool arrangements, Closed cycles, Aircraft propulsion, Industrial applications, Marine and land transportation	L1, L2	6
Module 2: Shaft power cycles Ideal cycles, Methods of accounting components losses, Design point performance calculations, Comparative performance of practical cycles, Combined cycles and cogeneration schemes, Closed cycle gas turbines	L1, L2	8
Module 3: Centrifugal compressor Principle of operation, Work done and pressure rise, The diffuser, Non dimensional quantities for plotting compressor characteristics, compressor characteristics.	L2, L4	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram

ASE2511	High Speed Aerodynamics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Low Speed Aerodynamics				
Co-requisites					

Course Catalog

Course contains the basic material essential for a foundation of compressible flow aerodynamics. The course introduces the fundamental concepts and principles of compressible flow and intends to provide the necessary background for advanced studies on the subject. The course covers the general principles and essentials of compressible flow, the flow equations, one-dimensional gas dynamics, wave motion and waves in supersonic flow, flow in ducts, small-perturbation theory. The exercises included in the course are intended to demonstrate the use of the course material and to outline additional equations and results.

Course Objectives

The objective of this course is to

1. Provide knowledge to the students about compressible flow and its applications.
2. Enable students to know about shock waves in supersonic flow and different related techniques to solve problems

Course Outcomes

On completion of this course, the students will be able to

- **CO1.** Identify and explain fundamental principles of compressible flow.
- **CO2.** Describe and derive wave motion and waves in supersonic flow.
- **CO3.** Explain, derive, and apply various governing equations and theories of compressible flow in ducts.
- **CO4.** Explain, derive, and apply governing small perturbation theory.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Compressible Aerodynamics Basic concepts of compressible flow continuity, energy and momentum equations. One dimensional inviscid flow; Stagnation quantities; Isentropic conditions. Speed of sound and Mach number; Isentropic relations; Area-velocity relation. Flow through constant area duct; Normal shock; Propagating Normal Shock. One dimensional linear and nonlinear wave motion.	L1, L2	9
Module 2: Oblique shocks and compressible Flows through ducts Oblique shock and supersonic compression by turning. Weak shocks and Mach waves; Supersonic expansion by turning. Prandtl-Meyer expansion fan; Reflection and intersection of shocks. Shock detachment and bow shock; Shock Expansion theory with application to thin airfoils. Governing equations for quasi One Dimensional Flow through converging and diverging ducts. Diffusers and supersonic Wind Tunnels.	L2, L3	9
Module 3: Subsonic compressible Flow over Airfoils, Linear Theory The derivation of velocity potential equation, Linearized velocity potential equation, Prandtl-Glauert compressibility correction, Critical Mach number, Whitcomb's area rule, Super critical airfoil.	L1, L2, L3	9

ASE2512	Aerospace Structures - II	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Mechanics of Solids, Aerospace Structures-I				
Co-requisites					

Course Catalog

Knowledge of basic mechanics and structures-I is crucial to comprehend the contents of this course. This course provides exhaustive knowledge to the students about the buckling and post buckling behavior of columns, plates and beams, which serve as a foundation for solving critical aerospace problems.

Course Objectives

The objective of this course is to

- Equip the students to understand the analytical study of the buckling behavior of columns and plates.
- Provide the knowledge to the students about the post buckling behavior of plates and field beams under tension.

Course Outcomes

On successful completion of this course, the students will be able to

CO1. Identify, explain, apply and analyze the fundamentals of buckling of columns and plates.
CO2. Identify, describe and determine the buckling of open sections.
CO3. Identify, explain and analyze the post buckling behavior of plates.
CO4. Identify, explain, apply and analyze the fundamentals of buckling of columns.
CO5. List and explain the different types of stress & strain measurement techniques.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Elastic Buckling of Columns Stability criteria: equilibrium approach, energy approach, imperfection approach, dynamic approach; Higher order governing equation; Large deflection of columns; Buckling of laminated composite columns; Approximate Techniques: Timoshenko's method, Rayleigh-Ritz method, Galerkin's technique; Effect of shear on buckling load; Problems.	L1, L2, L3, L4	8
Module 2: Buckling of Open Sections Torsional load –deformation characteristics; Equilibrium approach in Torsional Buckling & Torsional-Flexural Buckling; Energy Approach: Rayleigh-Ritz Method; Problems.	L1, L2	8
Module 3: Elastic Buckling of Thin Plates Introduction; Equilibrium approach; Energy Approach; Approximate Techniques: Rayleigh-Ritz method, Galerkin's Technique; Buckling of Stiffened Plates, Circular Plates & Thick Rectangular Plates; Problems.	L1, L2, L4	8
Module 4: Post-Buckling Behavior of Plates Introduction; Governing Equation; Energy Approach; Complete Tension Field Beams; Semi-Tension Field Beam; Angle of Diagonal Tension.	L1, L2, L3, L4	5
Module 5: Inelastic Buckling of Columns Double Modulus Theory; Tangent Modulus Theory; Eccentrically Loaded Columns; Empirical Relations for Short Columns.	L1, L2, L3, L4	4

ASE2513	Flight Mechanics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Low Speed Aerodynamics				
Co-requisites					

Course Catalog

This course contains Fundamental characteristics of standard atmosphere which are crucial for aerodynamic characteristics of airfoil and airplane. The course is designed to make students to understand aerodynamic forces and moments in steady, accelerated flight and in maneuvers for different flight modes and conditions.

Course Objectives

The objective of this course is to

1. Provide an insight to students about the characteristics of atmosphere.
2. Equip students about different forces on airfoil and wing due to immersion in free stream of air in flight.

Course Outcomes

On completion of this course, the students will be able to

CO1. Define and explain parameters of International Standard Atmosphere.

CO2. State, explain and apply the physical principle in estimation of aerodynamic drag over flight vehicles.

CO3. Describe, apply and analyze the aerodynamic characteristics over airfoils and wings of flight vehicles.

CO4. Explain and apply the basic equations and principles to analyze the airplane mechanics in steady flight.

CO5. Explain and apply the basic equations and principles to analyze the airplane performance in accelerated flight and maneuvers.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Standard Atmosphere Standard atmosphere, relation between Geopotential and Geometric altitudes, pressure, temperature and density altitudes, Relation for stratosphere and troposphere, Stability of atmosphere, aero-thermodynamics, Measurement of air-speed: true airspeed, indicated airspeed and equivalent airspeed, Airspeed indicator	L1, L2	7
Module 2: Aerodynamic Drag Drag and its effects, Types of drag and affecting factors, Drag polar, Compressibility drag, Design for minimum drag, Estimation of drag of complete airplane, Terminal velocity	L1, L2, L3	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module 3: Aerodynamic Characteristics Force and Moments coefficients dimensional analysis, Pressure distribution over 2D airfoil, Variation with angle of attack, Center of pressure, Aerodynamic center and connected problems, Lift, Drag and moment coefficients; Relations between lift and drag, Estimation of these characteristics from measured pressure distributions, Variation of aerodynamic coefficients with Reynolds Number and Mach Number, Effect of span, Aspect ratio, plan form, sweep, taper and twist on aerodynamic characteristics of a lifting surface, Delta wing aerodynamics	L2, L3, L4	7
Module 4: Airplane Mechanics in Steady Flight Straight and Level flight, stalling speed; Variation of drag with flight, Speed conditions for minimum drag, minimum power conditions; Power at other speeds, Gliding flight, Shallow and steep angles of glide; Sinking speed, Minimum sinking speed, Time of descent, Climbing flight at shallow angles, Correction for steep angles, Time to flight, Maximum rate of climb	L2, L3, L4	7
Module 5: Airplane Performance in Accelerated Flight and Maneuvers Take-off and landing, Calculations of take-off ground run, Take-off distances, Minimum ground run, assisted take-off, Calculation of landing ground run, Range and endurance and problems connected with them. Introductory comments on spins and stalls; turning flight, Maneuvers in 3D space	L2, L3, L4	8

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2514	Computer Aided Drafting Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Engineering Graphics				
Co-requisites					

Course Catalog

In this course the concept of design, drafting and modeling are discussed in details using AutoCAD software. The course contents include the basic commands, 2D and 3D modeling of machine components using AutoCAD. To master this course, students should have a background in basic knowledge of Engineering graphics and design.

Course Objectives

The objective of this course is to

- Equip the students with the concept of basic commands and features used in AutoCAD.
- Provide an overview to learn and apply the use of basic commands in generating the 2D sketches and 3D models of machine components.

Course Outcomes

On completion of this course, the students will be able to

CO1: Construct, edit and plot drawings using basic AutoCAD commands and features.
CO2: Construct and edit the model of machine components such as Piston, Connecting rod.
CO3: Construct and edit 2D sketches of pentagon, hexagon and any 2D drawing.
CO4: Construct and edit 3D model of nut, bolt and gear.
CO5: Construct and edit the geometry of hollow cylinder containing sphere and triangle.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: Basics of AutoCAD	L2, L3	2
Experiment 2: Modeling of machine Components such as Connecting, Rod, piston etc.	L2, L3	2
Experiment 3: 2D modeling for different Geometrics such as Hexagon, Pentagon etc	L2, L3	2
Experiment 4: 3D modeling of nut and Bolt.	L2, L3	2
Experiment 5: Modeling of Gear.	L2, L3	2
Experiment 6: Modeling of Compound Geometrics such as Hollow Cylinder containing Sphere, Triangle etc.	L2, L3	2

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2515	Structural Analysis Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Aerospace Structures-I, Aerospace Structures-II				
Co-requisites					

Course Catalog

Knowledge of basic structures and modeling is crucial to comprehend the contents of this course. This course provides extensive knowledge to the students about various modeling and analysis tools for the designing of aircraft structures and testing them practically, leading to the development and fabrication that serve as a foundation for better and safe futuristic designs.

Course Objectives

The objective of this course is to

1. Equip the students with the practical knowledge and applications of different types of beams and columns.
2. Provide an overview to learn and apply the FEM based tool for detailed structural analysis

Course Outcomes

On completion of this course, the students will be able to

CO1: List, explain and apply the basics of FEM and structures lab.
CO2: Explain and apply the different theorems in finding loads and shear center over the given types of beams and sections.
CO3: Describe and apply the concepts of photoelasticity for visualizing the stress distribution.
CO4: Describe, apply and analyze the stress distribution using FEM based designing tool.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: Introduction to FEM & Aircraft Structures Lab	L1, L2, L3	2
Experiment 2: To Verify the following theorems for the given beams a. Maxwell's Reciprocal Theorem b. Principle of Superposition c. Castigliano's Theorem	L2, L3	2
Experiment 3: To determine the shear center for Open & Closed sections	L2, L3	2
Experiment 4: To study the Photoelasticity apparatus and visualize the stress distribution over different sample shapes.	L2, L3	2
Experiment 5: To determine the stress distribution over a circular cylinder under axial compressive and tensile load using ANSYS structural workbench.	L2, L3, L4	2
Experiment 6: To determine the stress distribution over a rectangular plate under compressive and tensile load using ANSYS structural workbench.	L2, L3, L4	2

ASE2535	Summer Internship Evaluation-I	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The internship experience provides the student with an opportunity to explore career interests while applying knowledge and skills learned in the classroom in a work setting. The training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. The experience also helps students gain a clearer sense of what they still need to learn and provides an opportunity to build professional networks. The intern develops a greater understanding about career options while more clearly defining personal career goals. Hence, the training will be useful for their future employment in industry. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university.

Course Objectives

The objective of this course is to

1. Provide practical training on some demo or live projects that will increase the capability of the students to work in a team on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

CO1. Relate and apply the acquired classroom knowledge with technical, real-time industry environment.

CO2. Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.

CO3. Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.

CO4. Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

Course Content

Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

1. File should be in the following specification

– A4 size paper

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Spiral Binding

- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 40-70 pages.

3. Report Layout: The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students-**This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate-**This is page number (ii). It is given by the Institute.The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate -**This is a certificate, which the company gives to the students.
- **Contents-**This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement-**This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords-**This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile -**A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters-**Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography-**This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASE2517	Aircraft Systems and Instrumentation	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of aircraft systems and their importance based on various aspects. Knowledge of basic physics is crucial to comprehend the contents of this course. Studying this course the students will learn about various components, systems and instruments of aircrafts that serve as a foundation for better understanding of advanced course.

Course Objectives

The objective of this course is to

1. Provide knowledge of different types of control systems used in the aircraft and their associated instruments.
2. Provide knowledge about the applications and real time problems associated with those systems.

Course Outcomes

On completion of this course, the students will be able to

CO1. List, explain and compare various types of flight control systems.
CO2. Identify and describe the engine control system with applications.
CO3. List and explain the hydraulic and environment control system.
CO4. Outline and describe about the gyroscopic systems used in aircrafts.
CO5. List and explain about the different types of navigational and pitot static instruments.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Flight Control Systems Primary and secondary flight control, Flight control linkage systems, push-pull control rod system, cable and pulley systems, High lift control surfaces, Flight control actuation, linear actuator, mechanical actuator, mechanical screw jack actuator, Direct drive actuation, fly-by-wire actuator, electro-hydrostatic actuator, electro-mechanical actuator	L1, L2, L4	6
Module 2: Engine Control Systems Engine technology and principle of operation, fuel flow control, air flow control, control systems, control system parameters, input signals, output signals, example systems, engine starting, fuel control, ignition control, engine rotation, throttle levers, starting sequence, engine oil systems.	L1, L2	6
Module 3: Hydraulic and Environment Control Systems Hydraulic circuit design, hydraulic actuation, hydraulic fluid, fluid pressure and temperature, fluid flow rate, hydraulic piping and pumps, need for controlled environment, heat sources, ram air cooling, fuel cooling, engine bleed, bleed flow and temperature control, air cycle refrigeration, humidity control, hypoxia, g tolerance.	L1, L2	6
Module 4: Gyroscopic Systems Gyroscope and its properties, Gyro horizon, Turn and bank indicator, turn coordinator, Direct reading magnetic compass, Directional gyros.	L1, L2	6

ASE2609	Aircraft Maintenance & Quality Assurance	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of aircraft maintenances and their importance based on various aspects. This course provides introductory knowledge to the students about testing of various components as well as the fabrication of FRPs that serve as a foundation for better understanding of advanced course.

Course Objectives

The objective of this course is to

- Provide knowledge of various types of preventive maintenance: repairs, overhauls, and calibration, rigging and testing of aircraft and its instruments and components/systems.
- Provide knowledge about the layout of aircraft structure, corrosion of aircraft components and its prevention.

Course Outcomes

On completion of this course, the students will be able to

CO5. Identify and explain the importance of aircraft maintenance and quality assurance.

CO6. List and explain various types of testings for aircraft materials using DTs and NDTs and the corrosion prevention methods.

CO7. Illustrate the fabrication and repair of FRP components and explain the quality assurance practices.

CO8. Explain and demonstrate the layout of an aircraft along with the assembly and rigging.

CO9. Explain and demonstrate their course knowledge to disciplinary as well as interdisciplinary audience.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Maintenance Requirement of maintenance of aircraft, its components, systems, subsystems. Types of maintenance scheduling, Inspection of aircraft components. Types of Inspections, Repair, Modifications, and Reconditioning. Role of airworthiness, Issue of C of A.	L1, L2	6
Module 2: Testing of Aircraft Materials and Components Testing techniques for Tension, Hardness, Bending, Impact, Crushing, Torsion, Fatigue, Hydrostatic tests. NDT Techniques: X-ray, Gamma Ray, Ultra-sonic; Magna-flux.	L1, L2	6
Module 3: Layout of Aircraft Structure Principle and important sub-groups, Aircraft Station numbering sub-assemblies in airframe, landing gear, Power plant and its attachment, Rotorcraft Structure.	L1, L2	6

Manesar Gurgaon-122413

Module 4:Aircraft Assembly and Rigging Aircraft Assembly, Rigging, Alignment of fixed surfaces and flight controls and systems in details, balancing, Inspection and Maintenance. Flight control system of Helicopter.	L1, L2	6
Module 5: Fabrication and Repair of FRP Components Development of metal bonding and composite materials, Bonding Structures, Composites: Characteristics, types, Fabrication and repair.	L1, L2	6
Module 6: Quality Assurance Meaning of Quality and quality improvement, need of Quality, Statistical methods for quality control, Process capability. Need of Quality Assurance, Quality Audit, Concept of Zero defect, ISO 9000 quality systems, TQM.	L1, L2	6

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2613	Computational Fluid Dynamics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Fluid Mechanics and Dynamics, Flight Dynamics				
Co-requisites					

Course Catalog

This course introduces the beginning graduate and advanced undergraduate students to finite difference methods as a means of solving different type of differential equations that arise in fluid dynamics. Fundamentals of numerical analysis, ordinary differential equations and partial differential equations related to fluid mechanics and heat transfer will be reviewed. Error control and stability considerations are discussed and demonstrated. The Navier-Stokes equations will be solved using a commercial software.

Course Objectives

The objective of this course is to

- Provide introductory knowledge to the students about a variety of computational techniques that can be used for solving engineering problems.
- Provide education to the students about utilizing the computational software for result presentations and data visualization of engineering problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Describe, and apply the various governing equations to solve engineering problems.
CO2. Describe, and apply various mathematical approaches to solve partial differential equations.
CO3. Describe, and apply the fundamental knowledge and various techniques to create computational grids.
CO4. Describe, and apply the fundamental knowledge and various techniques to discretize computational grids.
CO5. Describe, and apply the knowledge and technique of finite volume method to achieve numerical solution of problems.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Governing Equations of Fluid Dynamics: Continuity, Momentum and Energy Equations; Derivation in Various Forms; Integral Versus Differential Form of Equations; Models of Flows; Substantial Derivative; Divergence of Velocity; Physical Boundary Conditions.	L2, L3	6
Module 2: Mathematical Behaviour of Partial Differential Equations Classification of Partial Differential Equations; Cramer Rule and Eigen Value Methods for Classification; Hyperbolic, Parabolic, and Elliptic Forms of Equations.	L2, L3	5
Module 3: Grid Generation and Techniques Need for Grid Generation; General Transformation of The Equations; Metrics and Jacobians; Structured Grids-Essential Features; Structured Grid Generation Techniques - Algebraic and Numerical Methods; Unstructured Grids-Essential Features; Unstructured Grid Generation Techniques- Delaunay-Voronoi Diagram; Advancing Front Method.	L2, L3, L5	5

Amity University Haryana
Manesar Gurgaon-122413

Module 4: Discretization Finite Differences Methods and Difference Equations; Explicit and Implicit Approaches; Unsteady Problem - Explicit Versus Implicit Scheme; Errors and Stability Analysis; Time Marching and Space Marching; Reflection Boundary Condition; Relaxation Techniques; Alternating Direction Implicit Method; Successive over Relaxation/Under Relaxation.	L2, L3, L5	6
Module 5: Finite Volume Technique and Some Applications Spatial Discretization - Cell Centered and Cell Vertex Techniques (Overlapping Control Volume, Duel Control Volume); Temporal Discretization - Explicit Time Stepping and Implicit Time Stepping; Time Step Calculation; Upwind Scheme and High Resolution Scheme; Unsteady Flows and Heat Conduction Problems.	L2, L3, L4	6

ASE2614	Aerospace Materials	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Aerospace Structures-I				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various types of materials, their properties and their applications in aerospace. This course serves as a foundation for better understanding of advanced courses relevant to aircraft manufacturing, aircraft design, construction and fabrication.

Course Objectives

The objective of this course is to

1. Provide strong knowledge base to students in respect of various important aerospace materials used in the manufacture of aircraft.
2. Provide introductory knowledge base to students regarding different types of alloys, their heat treatment processes and applications.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify and explain the fundamental of materials and their importance on flight vehicle.

CO2. Identify, explain and compare the properties of various aluminum and magnesium alloys and steel compositions. Also their application to aerospace vehicle vehicles.

CO3. Identify, describe and compare the properties of high strength and high resistance alloys along with their application to aerospace vehicle vehicles.

CO4. Identify and explain the corrosion and its different prevention methods for preventing aircraft components.

CO5. Identify and explain about the composite materials, their applications and different types.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction To Materials Properties of flight vehicle materials, Importance of strength/weight ratio of materials for Aerospace Vehicles, Importance of temperature variations, factors affecting choice of material for different parts of airplane.	L1, L2	6
Module 2: Aluminium & Magnesium Alloys Aluminium alloys, Heat treatment, High strength and high corrosion resistant alloys, Magnesium alloys and their properties, Heat treatment. Application to Aerospace Vehicle of these alloys.	L1, L2, L4	6
Module 3: Aircraft Steels Classification of alloy steels, Effect of alloying elements, Carbon steels v/s Alloys steels, corrosion resistant steels, Heat treatment, Corrosion prevention methods, Selection and application of steel alloys to aircraft manufacture.	L1, L2, L4	6
Module 4: High Strength And Heat Resistant Alloys Classification of heat resistant materials and iron, Nickel and cobalt base alloys, Refractory materials: Ceramics, Titanium and its alloys, properties of Inconel, Monal and K-Monal, Nimonic and super alloys: Application to Aerospace vehicles.	L1, L2	6

ASE2651	Aircraft Stability and Control	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Low Speed Aerodynamics, Flight Mechanics				
Co-requisites					

Course Catalog

This course provides the fundamental knowledge of stability and control of an aircraft. Students will understand the importance of different components of an aircraft in providing stability and giving control to aircraft motion. This course also provides understanding of mathematics behind the designing of aircraft and its components. The content of this course serves as a foundation for advance course of aircraft designing.

Course Objectives

The objective of this course is to

1. Provide understanding of various aspects of stability of an aircraft in flight and how geometric features of control surfaces and their proper angular movements achieve it.
2. Provide an analytical understanding of longitudinal, lateral and directional stability and measures that can be taken to control the same.

Course Outcomes

On completion of this course, the students will be able to

CO1. Define, explain, apply and compare the various fundamentals and aspects of stick fixed static longitudinal stability.

CO2. Define, explain, apply and compare the various fundamentals and aspects of stick free static longitudinal stability.

CO3. Define, explain, apply and compare the various fundamentals and aspects of directional stability and control of flight vehicles.

CO4. Define, explain, apply and compare the various fundamentals and aspects of lateral stability and control of flight vehicles.

CO5. Define, explain, apply and compare the various fundamentals and aspects of dynamic stability of flight vehicles.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Stick Fixed Static Longitudinal Stability Introduction to stability of airplane, stick fixed longitudinal stability, Neutral point, Centre of gravity limits, In flight measurement of stick fixed neutral point	L1, L2, L3, L4	8
Module 2: Stick Free Static Longitudinal Stability Control surface hinge moments, floating and restoring tendencies, the tab, Effect of free elevator on airplane stability, Elevator Control force, stick force gradients, Neutral point, Controls free center of gravity limit, In-flight measurement of stick free neutral point	L1, L2, L3, L4	7
Module 3: Directional Stability and Control Asymmetric flight, Feather cock stability, contribution of different parts of Airplane, Rudder Fixed and Rudder free static directional stability, rudder lock	L1, L2, L3, L4	7

ASE2612	Computational Fluid Dynamics Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Fluid Mechanics and Dynamics, Low Speed Aerodynamics, CAD				
Co-requisites	Computational Fluid Dynamics				

Course Description

The objective of this course is to provide knowledge and understanding to the students about the modeling, meshing and simulation of flow over aircraft and its components. Knowledge of Fluid Mechanics and Dynamics, Low Speed Aerodynamics, Computer Aided drafting is necessary to comprehend the contents of this course. This course equips the students with various approaches and tools of modeling and grid generations, also a brief knowledge is provided to the students about the numerical methods to solve numerous problems related to aerospace and mechanical systems.

Course Objectives

The objective of this course is to

1. Provide experience in computing aerodynamic problems and understanding flow physics over flat plate, pipe, cylinder, over a wedge and flow over an airfoil.
2. Provide knowledge to estimate flow characteristics with different Mach numbers to determining the pressure coefficients over different structural objects.

Course Outcomes

On completion of this course, the students will be able to

CO5. Describe and apply the engineering fundamentals and principles to model flat plate, pipe, cylinder, wedge, Nozzle, airfoil and wing in ANSYS Workbench/ AutoCAD.

CO6. Describe and apply the engineering fundamentals and principles to generate different types of grids with varying qualities, arrangement of nodes and topology.

CO7. Describe and apply the engineering fundamentals and principles to simulate the flow with varying parameters over the object with different numerical methods.

CO8. Compare and analyze the results of flow simulation to achieve an optimum design of the structure.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: Introduction to ANSYS	L1, L2,	1
Experiment 2: To simulate and analyze the flow over a flat plate	L1, L2, L3, L4	1
Experiment 3: To simulate and analyze the flow through a pipe	L1, L2, L3, L4	1
Experiment 4: To simulate and analyze the flow over a circular cylinder	L1, L2, L3, L4	1
Experiment 5: To simulate and analyze the flow over a wedge	L1, L2, L3, L4	1
Experiment 6: To simulate and analyze the subsonic flow through a nozzle	L1, L2, L3, L4	1
Experiment 7: To simulate and analyze the supersonic flow through a nozzle	L1, L2, L3, L4	1
Experiment 8: To simulate and analyze the flow over a symmetric aerofoil	L1, L2, L3, L4	1

ASE2615	Aeromodelling Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Low Speed Aerodynamics, Aircraft Propulsion				
Co-requisites					

Course Description

The objective of this course is to provide practical knowledge and understanding to the students about the design and fabrication of models and prototypes of aircraft. Knowledge of Introduction to Aerospace Engineering, Low Speed Aerodynamics, Aircraft Propulsion, and Aircraft Structures is necessary to comprehend the contents of this course. This course equips the students with necessary knowledge to understand the construction and operation of model and prototype flight vehicles.

Course Objectives

The objective of this course is to

- Provide practical knowledge to the students about the design of model and prototypes of flight vehicles.
- Provide practical knowledge to the students about the fabrication and operation of model and prototypes of flight vehicles.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain and apply the engineering fundamentals and principles to design and create various types airfoils and wing planforms using basic construction materials.

CO2. Explain and apply the engineering fundamentals and principles to design and create unpowered and powered gliders using basic construction materials.

CO3. Explain and apply the engineering fundamentals and principles to design and create radio-controlled flight vehicles.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: To design and fabricate various types of airfoils using basic raw materials (Thermocol, Balsa wood, Cardboard, etc.).	L2, L3, L5	2
Experiment 2: To design and fabricate various types of wing planforms using basic raw materials (Thermocol, Balsa wood, Cardboard, etc.).	L2, L3, L5	2
Experiment 3: To perform design calculations and fabrication of an unpowered glider aircraft.	L2, L3, L5	2
Experiment 4: To perform design calculations and fabrication of a powered glider aircraft.	L2, L3, L5	2
Experiment 5: To perform design calculations of a small-scale, radio-controlled, fixed-wing flight vehicle.	L2, L3, L5	2

ASE2637	Minor Project	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The minor project provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The minor project is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out minor project build a foundation and aptitude in students to conduct meaningful research towards a practical outcome. The minor project aims to impart necessary training to the students that is a value addition for their employability.

Course Objectives

The objective of this course is to

1. Provide practical training on small-scale projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

CO1. Relate and apply the acquired classroom knowledge with technical and real-time environment.

CO2. Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.

CO3. Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.

CO4. Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

Course Content

Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

1. File should be in the following specification

- A4 size paper
- Spiral Binding
- **Font**

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 40-70 pages.

3. Report Layout: The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students -** This is page number (i), the beginning of the small

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.

- **Certificate** - This is page number (ii). It is given by the Institute.The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** - This is a certificate, which the company gives to the students.
- **Contents** - This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement** - This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters** - Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASE2618	Finite Element Method	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Engineering Thermodynamics, Aircraft Propulsion				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of aircraft maintenances and their importance based on various aspects. This course provides introductory knowledge to the students about testing of various components as well as the fabrication of FRPs that serve as a foundation for better understanding of advanced course.

Course Objectives

The objective of this course is to

1. Provide knowledge of various concepts of Mathematical Modeling of Engineering Problems.
2. Provide knowledge about the basics of the Finite Element Technique, a numerical tool for the solution of different classes of problems in solid mechanics.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify and explain the basics of finite elements analysis.

CO2. Summarize and explain various types of techniques used in the formulation of finite elements methods.

CO3. List, identify and describe the different elemental properties along with their applications in the FEM of plates and shells.

CO4. List, explain and apply the gained knowledge in related FEM domains.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Finite Element Analysis Introduction; Basic Concepts of Finite Element Analysis; Introduction to Elasticity; Steps in Finite Element Analysis	L1, L2	4
Module 2: Finite Element Formulation Techniques Virtual Work and Variational Principle; Galerkin Method; Finite Element Method: Displacement Approach; Stiffness Matrix and Boundary Conditions	L1, L2	4
Module 3: Element Properties Natural Coordinates; Triangular Elements; Rectangular Elements; Lagrange and Serendipity Elements; Solid Elements; Isoparametric Formulation;	L1, L2	6
Module 4: FEM for Plates and Shells Introduction to Plate Bending Problems; Finite Element Analysis of Thin Plate ; Finite Element Analysis of Thick Plate; Finite Element Analysis of Skew Plate ;	L1, L2	6
Module 5: Additional Applications of FEM Finite Elements for Elastic Stability; Finite Elements in Fluid Mechanics; Dynamic Analysis	L1, L2, L3	4

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2702	Flight Dynamics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basic Mathematics, Low Speed Aerodynamics, Flight Mechanics,				
Co-requisites					

Course Catalog

This course contains Fundamental mathematical and dynamic principles for flight dynamics. The course also provides basic knowledge and understanding of use of general equations for unsteady motion of airplane, such as force equations, momentum equations and principle of rotation. It also provides basic knowledge of small disturbance theory for aircraft stability and control.

Course Objectives

The objective of this course is to

- Equip students to understand the complexities of airplane and rocket dynamics
- Equip the students about the degrees of freedom of flight trajectory and analysis of stability and control based on small disturbance theory and stability derivatives for airplane and rockets.

Course Outcomes

On completion of this course, the students will be able to

CO10. Define and explain particle and rigid body kinematics for different system of frames and use of co-ordinate transformation.

CO11. Define, explain and apply the equations of motion of aircraft and flight simulation of powered and unpowered flight.

CO12. Describe, apply and analyze small disturbance theory for stability and control.

CO13. Describe, apply and analyze Physical significance of stability derivatives and their use.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Overview; Fundamental of Vectors; Fixed and Inertial frame of reference, Earth as a flat surface, Coriolis Effect, Longitudinal, Directional and Lateral forces and moments; Longitudinal, Directional and Lateral Stability.	L1, L2	6
Module 2: Transformation Coordinate Systems; Transformation from Cartesian to Cylindrical and Cylindrical to Spherical Coordinate Systems; Transformation Matrix about X, Y And Z Axis; Rotation Matrix about X, Y And Z Axis; Earth, Body, Wind and Stability Axis Systems and their Transformation.	L1, L2	6
Module 3: Aircraft Equations of Motion Force equations in moving frame, Moment equations in moving frame, Orientation and position of the airplane: Principle Rotation, Euler angles, Euler rates, Transformation matrix, External forces, Angular velocities equations in moving frame	L1, L2, L3	8
Module 4: Small Disturbance Theory Introduction; Assumptions, Linearized equations of aircraft motion: Control fixed longitudinal directional equations, control fixed lateral directional equations, Stability analysis of linearized equations of motion	L1, L3, L4	8

Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basic Mathematics, Low Speed Aerodynamics, Flight Mechanics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various aspects and processes of aircraft design. This course provides in-depth knowledge to the students about flow process of carrying out the designing of aircraft, its associated loads and the safety requirements. Based on this course, students will be able to investigate new and emerging design aspects

Course Objectives

The objective of this course is to

- Provide introductory knowledge to the students regarding the fundamentals of aircraft designing and its structural analysis
- Provide education to the students about the concepts of different structural members and various associated loads

Course Outcomes

On successful completion of this course, the students will be able to

CO1. List and describe the basics of aircraft system design and aircraft structures
CO2. Identify, explain and analyze the applicability of design aspects and different aircraft loads.
CO3. Identify and explain the design considerations of wings and high lift devices.
CO4. Identify, correlate and apply the numerical and theoretical knowledge to investigate new and emerging design aspects

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Aircraft design, requirements and specifications, Different design phases, Importance of each phase. Weight, its importance. Aerodynamic and structural design considerations. Classifications of airplane.	L1, L2	8
Module 2: Air Loads during Flight Ground Loads, Airframe loads, maneuvering loads in flight, Load factor, V-n diagram, gust loads, and estimation of gust loads.	L1, L2	6
Module 3: Wing Design Consideration Selection of airfoil and planform. Span wise air loads variation, BMD and SFD. Weight distribution.	L1, L2, L4	8
Module 4: High Lift Systems Airfoil's maximum lift coefficient, leading and trailing edge devices, effect of sweep back. Stall and the deep stall. Effect of Re, V/STOL configurations.	L1, L2	7
Module 5: Conceptual Design of Airplane & Layout Preparation of 3-views and layout. Estimation of take-off, landing, climbing and cruise performance. Flight envelope.	L1, L2, L3	7

ASE2713	Vibration Engineering	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Engineering Mechanics				
Co-requisites					

Course Catalog

This subject will cover the fundamental concepts on the vibration of mechanical systems of one degree freedom, Lagrange's equations of motion and multiple degree of freedom systems. This course includes introduction to matrix methods, influence coefficient, forced vibration, principle mode of vibration, Rayleigh method, measuring instruments, isolation, torsional systems and balancing of machine.

Course Objectives

The objective of this course is to

1. Provide adequate knowledge to analyse one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, determine and apply the equation of motions for free vibration under damped and undamped condition for one degree freedom system.

CO2: Explain, determine and apply the equation of motion for forced vibration due to excitation of support.

CO3: Determine and apply the equation of motion in reciprocating and rotary balancing of machine and explain the vibration isolation.

CO4: Explain, determine and apply the equation of motion for two degree of freedom system and explain vibration absorber

CO5: Derive and apply the principle mode of vibration by matrix iteration, influence coefficient and solve the problem free and forced vibration having multi degree of freedom systems.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Scope of Vibration Important terminology and classification, Degrees of freedom, Harmonic motion, vectorial representation, complex number representation, addition, Derivation of equation of motion for one dimensional longitudinal, transverse and torsional vibrations without damping using Newton's second law, D' Alembert's principle and Principle of conservation of energy, Compound pendulum and centre of percussion, Damped vibrations of single degree of freedom systems, Viscous damping, underdamped, critically damped and overdamped systems, Logarithmic decrement, Vibration characteristics of Coulomb damped and Hysteretic damped systems.	L1, L2, L3	6
Module 2: Forced Vibrations of Single Degree of Freedom Systems Forced vibration with constant harmonic excitation, Steady state and transient parts, Frequency response curves and phase angle plot, Forced vibration due to excitation of support.	L1, L2, L3	8

ASE2714	Vibration Engineering Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Engineering Mechanics				
Co-requisites	Vibrations Engineering				

Course Catalog

The vibration engineering lab will cover the fundamental concepts on the vibration of mechanical systems of free vibration of simple and compound pendulum and Torsional vibration of rotor. An Interpretation of results is to find out the natural frequency of different mechanical systems.

Course Objectives

The objective of this course is to

1. Provide adequate knowledge to analyses one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

Course outcomes

On completion of this course, the students will be able to

CO1: Explain and apply the natural frequency of simple pendulum, compound pendulum and bifilar suspension.

CO2: Explain and apply the equation of motion of torsional vibration and determine the damping coefficient of free vibration.

CO3: Explain and apply the equation of motion of longitudinal vibration and determine the natural frequency of spring mass system.

CO4: Explain and apply the Dunkerley's rule and determine the natural frequency of beam.

CO5: Determine and apply the principle mode of vibration of shaft with different end conditions.

Course Content

Experiment	Blooms level*	Number of hours
1. To verify the relation $T = 2\pi\sqrt{\frac{L}{g}}$ for a simple pendulum.	L2, L3	1
2. To determine the radius of gyration 'k' of compound pendulum and verify the relation $T = 2\pi\sqrt{\frac{k^2+og^2}{g(og)}}$	L2, L3	1
3. To determine the radius of gyration of bar using Bi-filar suspension.	L2, L3	1
4. To study the torsional vibration (undamped) of single rotor shaft system	L2, L3	1
5. To study the damped torsional oscillations and determine the damping coefficient	L2, L3	1
6. To study the longitudinal vibration of spring and to determine the frequency theoretically and actually by experiment	L2, L3	1
7. To study the undamped free vibration of equivalent spring mass system.	L2, L3	1
8. To verify the Dunkerley's rule on simply supported beam and compare it with actually by experiment.	L2, L3	1
9. To study the forced lateral vibration of the beam for different damping	L2, L3	1

ASE2735	Summer Internship Evaluation-II	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The internship experience provides the student with an opportunity to explore career interests while applying knowledge and skills learned in the classroom in a work setting. The training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. The experience also helps students gain a clearer sense of what they still need to learn and provides an opportunity to build professional networks. The intern develops a greater understanding about career options while more clearly defining personal career goals. Hence, the training will be useful for their future employment in industry. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university.

Course Objectives

The objective of this course is to

1. Provide practical training on some demo or live projects that will increase the capability of the students to work in a team on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

CO1. Relate and apply the acquired classroom knowledge with technical, real-time industry environment.

CO2. Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.

CO3. Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.

CO4. Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

Course Content

Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

Manesar Gurgaon-122413

1. File should be in the following specification

- A4 size paper
- Spiral Binding

- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 40-70 pages.

3. Report Layout: The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
    - Appendices(optional)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

– References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students -** This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate -** This is page number (ii). It is given by the Institute.The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate -** This is a certificate, which the company gives to the students.
- **Contents -** This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement -** This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords -** This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile -** A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters -** Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography -** This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASE2737	Major Project	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The major project provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The major project is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out major project build a foundation and aptitude in students to conduct meaningful research towards achieving practical and technological outcomes for a given engineering problem. The major project aims to impart necessary training to the students that is a value addition for their employability.

Course Objectives

The objective of this course is to

1. Provide practical training on projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

CO1. Relate and apply the acquired classroom knowledge with technical and real-time environment.

CO2. Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.

CO3. Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.

CO4. Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.
